TO: File for 1,2,3-triazine-2,4,6-triamine polymer with methylated formaldehyde (CAS #68002-20-0)

FROM: Gary Butterfield, Toxics Unit, Air Quality Division

SUBJECT: Screening level for 1,2,3-triazine-2,4,6-triamine polymer with methylated formaldehyde

A November 23, 1998 CAS and NLM on-line search did not find any articles on the toxicity of 1,2,3-triazine-2,4,6-triamine polymer with methylated formaldehyde that are available. A review of the standard secondary references (RTECS, IRIS, NTP, IARC, etc.) also did not locate any toxicity information that could be used to calculate a screening level. Review of the RTECS did reveal an LD50 being listed. However, the journal citation in RTECS for this LD50 was not able to be located at any library from the brief citation, which was listed in this data base. Therefore, it appears that no toxicity data is available upon which the screening level for this material can be calculated.

The screening level for 1,2,3-triazine-2,4,6-triamine polymer with methylated formaldehyde is being set at the default screening level of 0.1 ug/m<sup>3</sup> with annual averaging due to a lack of toxicity data being available, see R232(i).
