

We corrected this mistake the same day October 25 2022 i honestly have never had that happen before that I know of. we had just recently re-located the paint booth and un-fortunately someone decided to use it before the filters had been put back in place.

I have since had a sign made and placed over the booth reminding everyone that the filters must be in place at all time. I have also taken the time to on every Thursday at our shop safety meeting to remind all of what happened and re-iterated that this is unacceptable.

Attached is a photo of the sign that has been put in place.
