RE: Violation Notice

Mr. Bognar,

Please use this letter as reference to the Violation Notice that we received on June 4, 2019.

First off, please let me be honest by telling you that in 40 years of doing business we were completely unaware of any of the DEQ laws that were in place until your visit to our yard and of course receiving notice of the violations and permits now required by the DEQ.

I can assure you that now that we are aware of these laws, we are taking these Violation Notices seriously and we are taking the proper actions to bring the yard up to code per the laws of the DEQ.

We have sent in the application for the permit.

We are in the process of purchasing a new Torching Shed with all the new accommodations required by the DEQ.

We have also researched and found what we think is a more than adequate Filtration System for the Torching Shed that will control the Air Pollution associated by torching material.

(please see attached)

Within the next few months we have full intentions of bringing all of the torching operations up to the current requirements of the DEQ.

We appreciate your time and your cooperation with this process.

If you should have any questions please do not hesitate to contact me.

Larry Throesch
