FACILITY: Lambda Energy Gathering LLC - Junction Station		SRN / ID: B6035
LOCATION: TURTLE LAKE RD, JOHANNESBURG		DISTRICT: Gaylord
CITY: JOHANNESBURG		COUNTY: OTSEGO
CONTACT:		ACTIVITY DATE: 12/05/2024
STAFF: David Bowman	COMPLIANCE STATUS: Compliance	SOURCE CLASS: SM OPT OUT
SUBJECT: FY25 Scheduled Records Review		
RESOLVED COMPLAINTS:		

On 5 December 2024 I, David Bowman MI EGLE AQD, conducted a records review for B6035 Lambda Junction Station, an opt-out source, operating under the conditions of permit to install (PTI) 77-77 and 611-81. The site consists of three above ground storage tanks.

**PTI 77-77**

Special condition (SC) 9. Visible emissions are limited to 20% opacity...

Discussion – There is no record keeping requirement for VE so there are no records to review.

**PTI 677-81**

SC 10. Shall not operate the crude storage tanks unless all provisions of R 604 are met...

**Discussion:**

R604 requires that the tank be capable of maintaining working pressure sufficient to prevent organic vapor or gas loss to atmosphere; have and maintain a vapor recovery system; that all covers/drains/lids/seals are closed when not in use; automatic valves are closed at all times except when roof is on the supports; rim vents, if provided, are set to manufacturers settings. Records reviewed from the source indicate that all these conditions are being met. Inspections records for each of the three tanks have been reviewed and it appears that the source is checking the appropriate items to ensure that the provisions of R 604 are met. No deviations have been reported or have been indicated in the records.
