Re: Response to Violation Notice: November 9, 2023 SRN: B7394

Dear Mr. Dan McGeen

Below I have provided our responses to the Violation Notice.

Response to Violation Notice dated November 9, 2023

<u>Allegation</u>	<u>Response</u>
Rich Field – Tank battery flare – pilot flame was not continuously lit as required	We had Advantage Electric repair the flare ignitor and has remained lit since. We may install a new ignitor box when we have a chance.
Rich Field – Tank battery flare – height was approx. 10 ft shorter than the minimum required 69 feet above ground level	I'm not sure how this flare lost 10' to its height as the current height is what it was when we took over the field. Our goal is to have the flare height increased this summer to the required 69' above ground level.

Please contact me if you have any questions.

Respectfully submitted,

Tuscola Energy, Inc.
