AIR QUALITY DIVISION

ACTIVITY REPORT: Scheduled Inspection

N090050028

FACILITY: Omimex-Miller & Wiezbowski C4-13		SRN / ID: N0900
LOCATION: SE, NE, NE, T19N R18W, SEC 27, HAMLIN LAKE		DISTRICT: Cadillac
CITY: HAMLIN LAKE		COUNTY: MASON
CONTACT: Ken Prior , Operations Manager		ACTIVITY DATE: 08/09/2019
STAFF: Rob Dickman	COMPLIANCE STATUS: Compliance	SOURCE CLASS: MINOR
SUBJECT: Scheduled inspection of this minor source.		
RESOLVED COMPLAINTS:		

Attempted to inspect this source per Permit to Install 924-84. I contacted Ken Prior to obtain a copy of the most recent gas analysis as per the requirements of the permit (see attached email). He indicated this facility does not have a permit requested a copy which I supplied. He noted that the address on the permit application does not match the location of the facility, but rather, matches the location of the Dow 2-27 which has been permanently dismantled.

I visited each facility. The location where the Dow 2-27 would have been is now open field with no equipment on it. Mr. Prior indicated his records say the wells supplying the facility were plugged in 1988. The Miller and Wiezbowski (M&B) C4-13 does have equipment on it including a pump jack and small heater, but nothing that would require a PTI. Additionally this facility has been shut in since March of 2017.

It is recommended that Permit to Install Number 924-84 be voided and the facility marked as permanently closed.
