DEPARTMENT OF ENVIRONMENTAL QUALITY AIR QUALITY DIVISION ACTIVITY REPORT: Scheduled Inspection

| FACILITY: Edmar Manufacturing Inc. | | SRN / ID: N1278 |
|-------------------------------------------|-------------------------------|---------------------------|
| LOCATION: 1122 INDUSTRIAL AVENUE, HOLLAND | | DISTRICT: Kalamazoo |
| CITY: HOLLAND | | COUNTY: ALLEGAN |
| CONTACT: Dave Shidler, President | | ACTIVITY DATE: 06/24/2014 |
| STAFF: Dale Turton | COMPLIANCE STATUS: Compliance | SOURCE CLASS: MINOR |
| SUBJECT: | | |
| RESOLVED COMPLAINTS: | | |

An unannounced inspection was conducted at this facility. This building formerly housed the SAF-Holland company. The SAF-Holland operation closed down and the building ownership changed about 3 years ago to Edmar Manufacturing Inc. (EMI). EMI is a custom metal stamping and fabricating company.

SAF-Holland cleaned out most of the equipment but some was left in place. Equipment that was left that is of interest to the AQD includes a double booth paint line, a shot blast booth, and the building heaters. There is no longer a solvent parts cleaner (cold cleaner) at this facility.

Double Booth Paint Line

This line is currently installed under Permit #147-86. This equipment is not being operated as a production line as it was with the previous owner. One of the two booths is used every so often to touch up a part or paint some something on a non-production basis. The permit is now eligible to be voided due to the low coating usage. Rule 287(c) allows operation of the equipment without a permit if the usage is less than 200 gallons per month. The company will be requesting for this permit to be voided.

Shot Blast Booth

This equipment is currently installed under Permit #146-86. It is still being used by EMI but was not in use during the inspection.

Although this could not be observed in operation, there was no evidence of accumulated particulates outdoors by the discharge point of the dust collector. There was no evidence of leakage from the ductwork or from the collector housing. The maintenance man periodically inspects the inside of the collector. This is considered in compliance with the permit.

<u>Heaters</u>

The company operated two of the gas fired space heaters over the cold months. These are reportedly rated at approximately1 million BTU/hr for each of them. Both are exempt from permitting due to Rule 282(b).

Powder Coating Line

This is a new installation put into place by EMI. The coating operation and the associated oven, was installed without a permit under the exemption in Rule 287(d). The overspray powder is collected and reused.
