RE: Genesee Power Station, LP (SRN N3570) Response to Violation Notice dated April 18, 2024

Dear Matt:

This letter is in response to the violation notice (VN) issued to the Genesee Power Station, LP (GPS) on April 18, 2024. The VN was issued as a result of records submitted to the Michigan Department of Environment, Great Lakes, and Energy (EGLE) to comply with a follow-up request from a site audit conducted by EGLE on April 3, 2024. This citing is as follows:

Process Description	Rule/Permit Condition Violated	Comments
EUBOILER	Special Condition (SC) I.6 / R 336.2810, 40 CFR 52.21(j)	Exceeded the NOx emission limit of 0.20 lb/MMBtu based on a 24-hour rolling average on February 27 and 28, 2024.
EUBOILER	Rule 912/General Condition 25	Failure to provide notice of the emission limit exceedance within 2 days and provide a 10 day follow up report.

GPS has since determined that there was no actual exceedance of the NOx lb/mmBtu 24-hour rolling average and therefore also, was not required to submit prompt notice to EGLE under Rule 912, General Condition 25. The data submitted to EGLE on April 11, 2024, was incorrect and in error as the calculations at the time of data download were using an incorrect fuel factor (Fd) to calculate the NOx lb/mmBtu hourly and 24-hour rolling averages. This submittal provides the explanation for how this error happened and provides supporting evidence to that fact.

The day of the EGLE inspection, April 3, 2024, Corporate Environmental Support remotely accessed the plant shared drive files to be ready to provide the “ROP Recordkeeping” spreadsheet if requested. This spreadsheet tracks compliance to permit condition EUBOILER VI.8, and is also set up to calculate a monthly fuel factor to be used for emission rate calculations. It was found that the fuel usage did not look correct and that the Fd calculation seemed too high for February 2024; however, the fixes to the macro and linkages within the spreadsheet could not be worked on remotely. When the plant Environmental, Health & Safety (EHS) Coordinator got back from vacation, it was determined that the spreadsheet needed to be

reviewed and corrected. The Fd error was traced to how the fuels spreadsheet macro totals the daily fuel use to a monthly value. The recordkeeping spreadsheet was then corrected to reflect the proper Fd for February 2024 (9244).

The fuel factor is changed monthly within the continuous emission monitoring system (CEMS) data handling and acquisition system (DAHS), called StackVision™, to reflect the most current fuel mix. This factor, along with the heat input capacity by fuel type, is calculated within the first week of every month utilizing the monthly fuel throughput values and the default 40 CFR Part 75, Appendix A fuel factor defaults. That fuel factor is then used prospectively in the DAHS data rate calculations for units of lb/MMBtu and lb/hr for NOx, CO, and SO₂.

The CEM DAHS vendor, ESC Spectrum, performs weekly data checks, prepares the Excess Emission Reports (EERS) for submission to EGLE, as well as creates the upload files for the quarterly Electronic Data Reports (EDR) submission to the U.S. Environmental Protection Agency (EPA). During their data review, they noticed that the fuel factors had not been updated for January or February 2024. On March 28, 2024, GPS sent ESC the fuel factor values (from the ROP recordkeeping sheet) to be entered into the CEM DAHS. Unfortunately, the wrong value had been calculated for February 2024 on the ROP Spreadsheet (due to the error described in the preceding paragraph). A value of 10,260 was provided to ESC to enter into the DAHS for February, which they did on April 3rd. When ESC entered the data in for the month, they did it in the "data lab" portion of the StackVision software (different than where the plant enters the data), and it changed the historic rate calculation values when the system updated.

On April 8, 2024, GPS downloaded the data reports from the DAHS in order to provide the information requested by EGLE. On April 11, 2024, when conducting a corporate review of the reports for submission it was noticed the 24-hour Rolling Report was showing exceedances for the NOx 24-hour rolling average for the time-period 2/27/24 10:00 to 2/28/24 15:00. This was unexpected and an absolute surprise as the DAHS is set up to notify the plant operations, plant EHS, and Corporate Environmental Support whenever emissions are approaching an exceedance (warning limit set at 0.19) as well as when there is an actual exceedance. Actual email from 2/27/24 shown below:

Subject: Warning Alarm: NOx lb/MMbtu 24-Hour Rolling Average

The parameter NOX#MM60 has reached 0.190636315179202 lb/MMbtu for its 24-hour rolling average over the period 022624, 1700 to 022724, 1659. This exceeds the warning limit of 0.19 lb/hr.

The weekly reviews by vendor ESC also never flagged an exceedance (see email in Attachment 1.0). Furthermore, the plant operators are very diligent about monitoring the hourly and 24-hour rolling averages. The control room is required to keep a log of the hourly values on their own excel spreadsheet for each day of operation and no exceedances were noted for 2/27/24 or 2/28/24. The operator's spreadsheet for these days is contained in Attachment 2.0. Boiler tuning was being conducted on these days and hourly NOx values were running high, so operators were paying special attention to the rolling average to ensure they would not exceed the limit. Several high-level warning alarms came in that day; however, an exceedance alarm was not generated on that day. Please see Attachment 3.0 for the alarm reports from the DAHS.

As part of the investigation into why the reports generated on 4/8/24 were showing an exceedance, the reports were re-downloaded, and this time, the hourly and 24-hour lb/mmBtu values were different and no exceedances were flagged. The reports were downloaded into an excel format and the plant was told they may need formatting (for better print structure) prior to saving in PDF format for submission. Later in the day on April 11, 2024, the response was submitted to EGLE; apparently with the old, incorrect PDF file from April 8, 2024, vs. the new correct information downloaded on April 11, 2024.

In summary, when researching what caused a report to show an exceedance, GPS traced it back to an interval of time when an incorrect fuel factor was being utilized in the calculations and showing up in downloaded reports, and then human error of simply attaching the wrong report from the electronic file folder to the email submission to EGLE. A timeline of events is presented below:

3/28/24 – GPS directs ESC to change the fuel factor for February to 10,260 scf/mmBtu

4/3/24 – EGLE AQ conducted a “pop-in” inspection. A records request email received that afternoon.

4/3/24 – ESC changes the Fuel Factor (Fd) to 10,260. This action retro-actively caused an alarm to show up for exceedance from 2/27/24, 10am to 2/28/24, 3pm as the Feb Fd value was incorrect. (There is no tracking mechanism within the DAHS that shows what date alarms “pop up” on the alarm screen. (note that the alarm was acknowledged on 4/13/24 in the Alarms Report, Attachment 3)

4/8/24 – Site generates inspection follow-up reports for Regulator (hourly and 24-hour roll averages). Report shows exceedances for NOx lb/mmBtu.

4/10/24 – ESC changes Feb. Fd from 10,260 to the correct value of 9,244 (Note In fact that the monthly ROP recordkeeping sheet that Roxanna sent with the submission, filename: EUBOILER_3_Heat Input capacity by Fuel Type, shows the correct calculated fuel factor for February.)

4/11/24 – Reports are re-generated for regulatory submission. However, the incorrect reports (the ones generated on 4/8/24 vs. 4/11/24) were inadvertently submitted to the agency via email.

The CEM DAHS is set up to automatically record when anything is manually changed in the StackVision software and also records the login ID of who made the change. Evidence of the Fd changes logged into the system is contained in Attachment 4.0. At the end of the quarter, once the EDRs and the EER/Downtime Reports have been generated, ESC “locks down” the data so it cannot be inadvertently changed through the daily data processing application. It is internal procedure that if there are any DAHS changes that require re-submission of a report to a regulatory agency, that change requires documented management approval. The quarterly Excess Emissions and Downtime Reports for Q1 2024 will not be reporting any gaseous emission exceedances as the quarterly reports have now been through the proper internal QAQC process and we will be attesting to its truth and accuracy.

A re-submission of the hourly and 24-hour average data for NOx and CO from the original site inspection request accompanies this submission, as both the lb/mmbtu and lb/hr values are affected by the fuel factor and is contained in Attachment 5.0. Also included in this submission is the newly requested data from the VN for the historic data back to April 11, 2022, included in Attachment 6.0 (and also attached in excel format in email).

As a side note, the plant ceased firing of Tire Derived Fuel (TDF) in February 2024. As a result of that action, the plant will be using the default fuel factor code of 9,240 for wood fuel.

GPS vigorously monitors compliance to the ROP limits and takes its reporting obligations to EGLE very seriously. It is unfortunate that a recordkeeping error (that was caught internally) indicated an exceedance which never really existed. This error would not have made it through the Quarterly Data Reporting Quality Assurance/Quality Control (QAQC) review regime for reports due 4/30/24 (EDRs and EERs). It comes down to a slight human error issue of submitting a report containing outdated and incorrect information. With this in mind, GPS respectfully requests that EGLE rescind the VN as there was actually no permit deviation, exceedance, violation of a permit condition, or impact to the environment. If it is not possible to retract the VN, then GPS respectfully requests that EGLE provide GPS with written agreement that no limits were exceeded and confirmation of closure of the VN.

Please contact me at (517) 375-3043 if you have any questions or require further information concerning the contents of this submittal. If you email me, please be sure to include the Plant Manager, Mr. Thomas Clift (thomas.clift@NSCE.com) and the plant EHS Coordinator Ms. Roxanna Woodard (Roxanna.woodard@NSCE.com) in all correspondence. A signed ROP Certification form accompanies this submission.

Sincerely,

Kathryn M. Cunningham, P.E, Principal Engineer
Kathryn.cunningham@cmsenergy.com

 Annual Compliance Certification (Pursuant to Rule 213(4)(c))

Reporting period (provide inclusive dates): From _____ To _____

- 1. During the entire reporting period, this source was in compliance with ALL terms and conditions contained in the ROP, each term and condition of which is identified and included by this reference. The method(s) used to determine compliance is/are the method(s) specified in the ROP.
- 2. During the entire reporting period this source was in compliance with all terms and conditions contained in the ROP, each term and condition of which is identified and included by this reference, EXCEPT for the deviations identified on the enclosed deviation report(s). The method used to determine compliance for each term and condition is the method specified in the ROP, unless otherwise indicated and described on the enclosed deviation report(s).

 Semi-Annual (or More Frequent) Report Certification (Pursuant to Rule 213(3)(c))

Reporting period (provide inclusive dates): From _____ To _____

- 1. During the entire reporting period, ALL monitoring and associated recordkeeping requirements in the ROP were met and no deviations from these requirements or any other terms or conditions occurred.
- 2. During the entire reporting period, all monitoring and associated recordkeeping requirements in the ROP were met and no deviations from these requirements or any other terms or conditions occurred, EXCEPT for the deviations identified on the enclosed deviation report(s).

 Other Report Certification

Reporting period (provide inclusive dates): From NA To NA

Additional monitoring reports or other applicable documents required by the ROP are attached as described:

Re-submission of emissions data per 04/03/2024 Inspection information request

Response to VN 20240418

I certify that, based on information and belief formed after reasonable inquiry, the statements and information in this report and the supporting enclosures are true, accurate and complete

Stack Vision Alarms Report

Alarm History

Plant: GENESEE POWER STATION LP

Source(s): UNIT1

Report Period: 02/26/2024 00:00 Through 02/28/2024 23:59

kmcunnin Apr25

System Alarms

No System Alarms to report for selected time period.

Note that alarm was responded to after the time period of the false exceedance, giving credence to evidence that the alarm was generated in April. It is policy that operators acknowledge alarms with a memo before closing.

Data Alarms

Source: UNIT1	Parameter: NOX#MM60		
02/27/24 10:00	EXCEALM	024h	EXCEEDANCE DATA WARNING
	Alarm Time: 02/27/24 10:00		Value: 0.207
	RTN Time: 02/28/24 03:00		Acknowledge Time: 04/13/24 16:42
Acknowledged by: Planta			
	Reason Code: 03 - EE - Process problems		
	Action Code: 11 - Other Corrective Action		
	Memo: STORM Testing onsite to take boiler readings... Ran high emissions at elevated load for said testing. Lowered load to control emissions. No permit limits were exceeded.		
02/27/24 15:00	WARNALM	024H	APPROACHING EXCEEDANCE
	Alarm Time: 02/27/24 15:00		Value: 0.191
	RTN Time: 02/27/24 15:59		Acknowledge Time: 02/27/24 18:03
Acknowledged by: Planta			
	Reason Code: 04 - EE - Other known causes		
	Action Code: 11 - Other Corrective Action		
	Memo: Tuning boiler... have since ramped down load, burning urea, giving extra air.		
02/27/24 16:00	WARNALM	024H	APPROACHING EXCEEDANCE
	Alarm Time: 02/27/24 16:00		Value: 0.191
	RTN Time: 02/27/24 16:59		Acknowledge Time: 02/27/24 18:03
Acknowledged by: Planta			
	Reason Code: 04 - EE - Other known causes		
	Action Code: 11 - Other Corrective Action		
	Memo: Tuning boiler... have since ramped down load, burning urea, giving extra air.		
02/27/24 17:00	WARNALM	024H	APPROACHING EXCEEDANCE
	Alarm Time: 02/27/24 17:00		Value: 0.191
	RTN Time: 02/27/24 17:59		Acknowledge Time: 02/27/24 18:03
Acknowledged by: Planta			
	Reason Code: 04 - EE - Other known causes		
	Action Code: 11 - Other Corrective Action		
	Memo: Tuning boiler... have since ramped down load, burning urea, giving extra air.

24 Hour Emissions Average

Plant: GENESEE POWER STATION LP

Interval: 24 Hour

Type: Roll

Report Period: 01/01/2024 00:00 Through 02/01/2024 23:59

Time Online Criteria: 1 minute(s)
