Ref: Violation Notice

To Whom It May Concern:

The dry bed scrubber was installed February 12, 1995 and attached to the stack in question that has the height of thirty-five feet. There is no record of alteration or reconstruction to this stack.

Medline has contracted Myers Plumbing & Heating to extend the exhaust vent to a minimum of forty feet above ground level. The work will be completed by March 19, 2021.

All stacks were reviewed to ensure compliance and the dry bed scrubber stack was the only one that did not match the height requirements. Future projects will require management review prior to and after project is complete.

Sincerely

A handwritten signature in blue ink that reads "a2 Szakal".
