LOCATION: 823B W WESTERN, MUSKEGON	DISTRICT: Grand Rapids
CITY: MUSKEGON	COUNTY: MUSKEGON
CONTACT: John McNanus , VP of Engineering	ACTIVITY DATE: 01/11/2024
STAFF: Scott Evans	COMPLIANCE STATUS: Compliance
SUBJECT: On-Site inspection to verify decommissioning of equipment for permanent facility shutdown and voiding of permit.	SOURCE CLASS: MINOR
RESOLVED COMPLAINTS:	

On January 11, 2023, State of Michigan Department of Environment, Great Lakes, and Energy Air Quality Division staff members Scott Evans and Laura Martin conducted an on-site inspection of the Dynamic Finishing II facility located at 823B Western St. in Muskegon, Michigan, to verify the dismantling of all permitted chroming equipment as part of the facility closure process. This facility has historically been a chroming facility that produced small products such as springs that could be used for vehicle transmissions or medical equipment among other products. No metal forming or machining operations were conducted at this facility.

This facility is closing as the company is ceasing chroming operations. The company has other operational facilities that do form and machine small metal components in the form of wires and springs. Currently there are no plans by the company to begin chroming operations at any of these other facilities, nor are there plans to use this facility for any other purposes. Once all equipment and chemicals have been removed, the building lease will end.

During the inspection it was observed and confirmed that all equipment has been rendered inoperable. Connections and mechanical components were removed from all equipment. Multiple tanks still contained some of the chroming chemicals, however the facility has provided the AOD with copies of orders and proper notifications to other state divisions regarding planned removal of the chemicals, which are scheduled for February or March, depending on factors such as contractor scheduling and weather conditions. The facility has requested that PTI No. 556-94 be voided in light of the closing of this facility. At this time it does appear that the facility is no longer operational and so the permit can be voided.
