

To: EGLE, AQD, Grand Rapids District Office

May 14, 2019

Attn: Mr. Adam Shaffer

CC: Ms. Jenine Camilleri

On February 20, 2019, R.L. Adams Plastics Inc. was inspected by Mr. Adam Shaffer, Environmental Quality Analyst from EGLE. During the course of the inspection, two violations of the MI-ROP-N7221-2015a were found. R.L. Adams Plastics has taken immediate action to correct the violations as follows:

Violation 1: Failure to record daily pressure drop readings.

This violation was due to operators failing to log entries several days between January 2018 and January 2019. R.L. Adams took immediate action to correct this mistake by adding a condition to the daily production sheet, where operators will not be able to save the daily production notes if the “dust collector reading” field is blank. This also serves as a preventive measure to avoid errors in the future.

Violation 2: Incorrect stack dimension.

The stack that replaced SVEXTR1 is listed on the MI-ROP-N7221-2015a as a 24” diameter when it actually measures 42”. This was a mistake where numbers were interchanged on the PTI. R.L. Adams took corrective action by submitting a new Permit to Install application to amend the ROP.

The three stacks venting horizontally, identified as SVLRGBAG, SVSMLBAG and SVRECLAIM were replaced on April 23, 2019 by three new stacks that vent vertically. Table 1 shows the measurements requested on the Violation Notice for the nine stacks not requested during the site inspection.
