Subject: Violation Notice

Hello April,

As per requested by your written Violation Notice dated May 21, 2014, please accept my written response as follows:

The site located at 631 Chestnut St. SW had changes made to the processing of shingles earlier in 2013 and we assumed Air Quality permitting was not required for the change in process due to the change of screening vs. grinding.

I am currently preparing our permit application for the changes to our process and will get that to you before the end of this week.

This permit application will include a thorough discussion of the current operations and history of our asbestos testing results.

If you have any questions or need any further information, please feel free to contact me at (616) 648-7504.

Ellie Kane
