To Whom It May Concern:

In response to special condition 1.13.C on Dec 30th 2019 my staff relocated our crusher to the aforementioned location on the same site but inside the minimum 500 ft setback. I instructed my staff to relocate the crusher closer to the easterly pile but to keep in mind the minimum setbacks. Clearly this did not happen, and I take responsibility for that. After speaking with Mr. Weiss on Jan 3rd, we formulated a plan to finish up what was left, which was completed 1.17.20. In response to special condition 1.7. I do not agree. Our crushers and screen are equipped with water spray devices, but due to the freezing temperatures, they couldn't be used. We have always used water spray for our dust control, with the exception of the freezing temperatures we use the moist dirt in the concrete to quell the dust. We had removed our water truck for maintenance, but was back on site 1.4.20, and put back in service.

Sincerely,
Vaughn Smith
