On July 8th 2015 you visited our New Hudson location 56555 Pontiac Trail New Hudson MI. and inspected our used oil furnaces which were found to not be compliant because of lack of a permit. When these used oil furnaces were installed the oil used to sustain them was produced entirely on site. As our business of mobile preventative maintenance has expanded we began bringing in oil from offsite oil changes as well. We were not aware that this violated the exemption status for the furnaces. We are not currently using the burners and won't be until the permit is filed.

I am working on personally filling out the permit to install for the New Hudson location and our other locations throughout the state. After working on the permit for a couple week I have found multiple things I have questions on and need clarification, because of this I plan on attending the workshop hosted on September 1st and will complete the permits immediately following the workshop. We have evaluated our furnaces in our other locations and will be filing permits along with New Hudson to prevent a reoccurrence. We are also attending the webinars hosted by the DEQ to ensure that we are up to date on current standards and legislation. If you have any question, or need clarification on anything please contact me.

Sincerely,

X 
Matthew Moore
