Memo to : Tyler Salamasick  
From: John A Chase Plant Manager Poltrona Frau  
Subject: Glue Booths  
Date: 8/9/2016

Tyler ,

Attached you will find the logs for the daily glue usage on the LX Chrysler 300 program and the KL Jeep Program. Both programs have not come to fruition as quoted by our customers so our volumes are very low. The KL program started in May. As you can see the Average usage of the KL glue mixed is around 22,000 = 5.8 gallons. The LX program uses 4991 grams a day = 1.318 gallons. Total = 7.118 gallons per day x 22 days = 157 gallons per month. ( under 200 gallons).

I also attached the plant layout showing 2 LX booths on one side of the plant and 1 KL booth on the other side of the plant.

For better filtration I have initiated the process for every Friday the old filters will be taken down and thrown out , then behind that wall will be vacuumed out, then a new filter put on. This too will be logged on the sheet.

As an added protection we added another filter on the outside to the top of the stack. ( Picture attached). These will be changed Monthly and or more frequent if needed depending on collection as they are new to the system. We will be sure to continue to keep our daily records of usage and have them on file.

Regards,
