RE: U402306907; Kalkaska County

Project Start Date: 10/03/2023
Project Completion Date: 10/12/2023

- Matts Underground was hired by the Village of Kalkaska to demolish and dispose of multiple residential structures.
- Matts Underground required the Village of Kalkaska to contract a third party directly for asbestos/lead inspection, identification and remediation prior to any demolition activity.
- After the inspection period was complete, any structure that was determined non-detect for asbestos or lead, Matts Underground was given the notification to proceed with the demolition.
- The structures that were determined to have asbestos or lead present were contracted with another party for demolition and disposal.
- During the demolition process for the third structure an EGLE representative visited the location and notified Matts Underground that they were in violation of Rule 6 based on the incomplete 10-day notification for structure demolition.
- It was verbally determined that any demolition that exceeds (1) structure per contractor be considered commercial. This would then qualify as a "project" and be required to conform with the 10-day notification standard.
- This was a standard that Matts Underground has not encountered in the past.
- It shall be Matts Underground standard operating procedure to provide a 10-day notice for any project that includes more than (1) structure regardless of residential or commercial zoning classification.

Please feel free to contact me if you have additional questions or concerns.

Sincerely,

A handwritten signature in black ink, appearing to read "Matthew Bennett", written over a white background.
