

Dear Sir/Madam

We received a notice that our dust collection system for Pallet Solutions in Vestaburg MI was not working properly and never permitted causing it to be in violation of 2 laws (Act 451 Rule 201, Rule 910). This stemmed from an open burn complaint that was being checked into on August 11 which was found to be a non issue by the inspector. We purchased the business on January 18, 2016 and have been working on making changes where necessary. The equipment was installed and running when we bought the business. We were not aware that a system like this requires a permit to be installed and run. After the visit we did an inspection and found several holes in the pipes and equipment. We are looking at options for repairing or replacing the affected equipment. In order to apply for a permit we will need to have some time to gather the specs on the existing equipment, and see if we can find out when it was installed originally (both requirements for the permit application), and also look at other types of equipment (bag house filter for example) that would exempt us from permitting this rather than trying to gather information that may be impossible to find. We ask that we be given 3 months to gather information on this equipment and look at other equipment options and costs associated in both cases as well as how each option will affect us in the long run. In the meantime we will continue to make an effort to contain as much of the sawdust as possible while we look at which option works best for us. Please call us at 330-359-0270 if you have any questions. Your assistance is appreciated as we review this matter.
