To whom it may concern,

RE: SRN:U82170169 WAYNE COUNTY

In response to your visit to Rex Metal Recycling Detroit on March 17th 2017. REX Metal had a large Industrial scrap metal project, which some of the pieces of machinery are oversized and permitted loads (not typical). Typically the material that we receive is in spec and no torturing has been required to send it to the steel mill. This job was isolated project, 95% of the material we get in we shear with our large hydulic shears on excavators. This particular job lasted about for approx 40days start to end on our property. After your visit we have found another source to handle oversized material. Rex Metals was unaware of the permit requirement for portable torching. Rex Metal Recycling will no longer torch or operate torching equipment without obtaining necessary permits from your office. Any question please calls me at 313 273-1000 ext 3.

Thanks
