CAUTION: This is an External email. Please send suspicious emails to abuse@michigan.gov

This email is in response to a violation notice received from your office dated September 25, 2020. As I stated in an email to you dated October 1, 2020; maintenance was able to calibrate the graph on our incinerator so as to record the proper temperature of the incinerator. I have attached the original graph that I sent to you on October 1, 2020, showing the graph registering the correct temperature. I have also attached a more current chart to demonstrate that the graph is still recording the correct temperature. The graph is checked daily to make sure that we are maintaining a temperature of 1600 degrees during the burn.

I hope that this email remedies the violation. Please let me know if you should need more documentation or if you should have any questions.

Thank you.
