Re: Response to Violation Notice: June 28, 2022 SRN: N7954

Dear Mr. Adam Shaffer

Below I have provided our responses to the Violation Notice.

Response to Violation Notice dated June 28, 2022

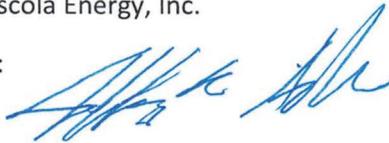

<u>Allegation</u>	<u>Response</u>
McPherson A-1-24 exceeded H2S Limit	We exceeded the limit from 4/10-17 and 4/20-25. The last exceedance was on April 25 th . After we discovered the exceedance, we lessened the pumping hours. This lowered the gas to the flare and we haven't been near the limit since. We have since adjusted back to normal operations and still haven't approached the limit. Despite us going over the limit we were very close to the limit and believe we acted quickly to get us back under the limit. It is not known why our gas pressure was high during this time and believe that is something we can't control, but will work towards checking our limits more often.
McPherson vapor return line not installed	I am not sure why this wasn't installed. I can't believe this was never noticed before. This was installed the next day after the inspection on June 3 rd .

Please contact me if you have any questions.

Respectfully submitted,

Tuscola Energy, Inc.
