RESOLVED COMPLAINTS:		

An unannounced inspection was conducted on this facility. This company sells aftermarket lift kits and other suspension parts for 4 x 4 vehicles.

There is not any manufacturing being done at this facility. Here they design parts and groups of parts needed to make a kit. Parts are made elsewhere and sent here to be warehoused and assembled into kits as needed.

The building has several exhaust stacks on the roof. All of the stacks were installed by the previous owner of the building and are of no use to this operation. They have all been blocked off but still remain on the roof.

The only equipment worth noting at the facility that emits air pollutants are the 3 heaters. All three natural gas heaters qualify for the Rule 282(b)(i) exemption, so permits are not needed. Rule 282(b)(i) exempts gas fired equipment used for space heating that has a rated heat input capacity of not more than 50,000,000 Btu/hr.
