February 8, 2019

Mr. Salamasick:

Concerning the complaint on January 2, 2019 regarding the smoke and foul odors. I believe the reason for the complaint was due to burning particle board in a greater ratio to hardwood.

The action that has taken place is to only burn 20-25 percent particle board mixed in with the hardwood being burned, and have explained to employees the importance of doing this so the problem does not reoccur.

The wood stove at Kent Welding is rated at 1,000,000 Btu per hour Which is less than the 6,000,000 Btu listed in the exemption handbook.

Sincerely,

Matthew DeLano, President
