MICHIGAN DEPARTMENT OF ENVIRONMENTAL QUALITY
DRINKING WATER AND MUNICIPAL ASSISTANCE DIVISION

SAMPLING PLAN – LEAD AND COPPER

Issued under authority of the Michigan Safe Drinking Water Act, 1976 PA 399, and Administrative Rules, as amended. Administrative Rule R 325.10710a requires a water supply to monitor for lead and copper according to a pool of targeted sampling sites in accordance with designated site selection criteria. Complete and submit this form to MDEQ.

Water Supply Information

City of Adrian Supply Name	0040 WSSN

Michigan Lead and Copper Rule
Lead and Copper Tap Sample Site Selection Criteria

Community water supplies must identify a pool of lead and copper sampling sites containing **AT LEAST** the number of sites necessary to conduct **STANDARD** monitoring (see instructions for number of required sites). It is highly recommended that the sampling pool contain more sites than required in case routine sites are unavailable at time of sampling. The sampling pool must target high risk sites using the criteria below.

- **Samples must be collected from Tier 1 sites, unless …**
- insufficient Tier 1 sampling sites are available, then **Tier 2** sites must be used, unless …
- insufficient Tier 1 and Tier 2 sampling sites are available, then **Tier 3** sites must be used.
- If no Tier 1, 2, or 3 sites are available, sampling sites must be representative of plumbing materials typically found throughout the water system.

TIER 1 SITES - Single family residences with either: ○ Lead service lines (LSL)* ○ Interior lead plumbing Multiple family residences (MFR) with LSLs or interior lead plumbing may be used as Tier 1 sites when MFR comprise at least 20 percent of the total service connections.
TIER 2 SITES – Other buildings or multiple family residences with either: ○ Lead service lines* ○ Interior lead plumbing
TIER 3 SITES - Single family residences with: ○ Copper plumbing with lead solder installed before July 1988
OTHER SITES ○ Sites representative of plumbing materials commonly found throughout the water supply.
*** Priority should be placed on sites with full LSLs, followed by partial LSLs, followed by lead goosenecks or pigtails.**

Also Note:

- Each round of sampling should be conducted at the **SAME** sampling sites unless …
  - a site no longer meets tiering criteria (for example, a site is no longer Tier 1 after having the lead service line replaced); or
  - a site is unavailable (for example, a site has no water service, resident refuses to participate, etc.)
- **DO NOT** sample from outside hose spigots or utility sinks.
  - For residential sites, samples **MUST BE** collected from kitchen or bathroom taps typically used for consumption. For non-residential sites, samples **MUST BE** collected from taps typically used for consumption.
- Samples **MAY NOT** be taken from taps that have point of use or point of entry treatment devices designed to remove inorganic contaminants, such as an iron removal filter, reverse osmosis system, or water softener.

Comments Page:

My apologies for site # 40. 1215 Perry St. after ~~ge~~ submitting their sample this time + getting the Blessing of Both the city of Albion + the EGLE stated that they NO longer wanted to be part of the sampling plan. 1003 E. Mi contacted City Hall on Monday B-4 Christmass, having talked to their Neighbor about the city water. Since (from my L + C inventory you will see) MI Ave is in my "institutional belief" that most services are Brass with Lead Goose necks, I accepted 1003's request but have NOT had time to do a visual inspection ON M-99. It is on the list for the next Go'rourd of samples.

Please Let me know of your problems with this plan/report.

Thank-you

SAMPLING PLAN – LEAD AND COPPER

Issued under authority of the Michigan Safe Drinking Water Act, 1976 PA 399, and Administrative Rules, as amended. Administrative Rule R 325.10710a requires a water supply to monitor for lead and copper according to a pool of targeted sampling sites in accordance with designated site selection criteria. Complete and submit this form to MDEQ.

Michigan Lead and Copper Rule
Lead and Copper Tap Sample Site Selection Criteria

Community water supplies must identify a pool of lead and copper sampling sites containing **AT LEAST** the number of sites necessary to conduct **STANDARD** monitoring (see instructions for number of required sites). It is highly recommended that the sampling pool contain more sites than required in case routine sites are unavailable at time of sampling. The sampling pool must target high risk sites using the criteria below.

- **Samples must be collected from Tier 1 sites, unless …**
- insufficient Tier 1 sampling sites are available, then **Tier 2** sites must be used, unless …
- insufficient Tier 1 and Tier 2 sampling sites are available, then **Tier 3** sites must be used.
- If no Tier 1, 2, or 3 sites are available, sampling sites must be representative of plumbing materials typically found throughout the water system.

TIER 1 SITES - Single family residences with either: ○ Lead service lines (LSL)* ○ Interior lead plumbing Multiple family residences (MFR) with LSLs or interior lead plumbing may be used as Tier 1 sites when MFR comprise at least 20 percent of the total service connections.
TIER 2 SITES – Other buildings or multiple family residences with either: ○ Lead service lines* ○ Interior lead plumbing
TIER 3 SITES - Single family residences with: ○ Copper plumbing with lead solder installed before July 1988
OTHER SITES ○ Sites representative of plumbing materials commonly found throughout the water supply.
*** Priority should be placed on sites with full LSLs, followed by partial LSLs, followed by lead goosenecks or pigtails.**

Also Note:

- Each round of sampling should be conducted at the **SAME** sampling sites unless …
  - a site no longer meets tiering criteria (for example, a site is no longer Tier 1 after having the lead service line replaced); or
  - a site is unavailable (for example, a site has no water service, resident refuses to participate, etc.)
- **DO NOT** sample from outside hose spigots or utility sinks.
  - For residential sites, samples **MUST BE** collected from kitchen or bathroom taps typically used for consumption. For non-residential sites, samples **MUST BE** collected from taps typically used for consumption.
- Samples **MAY NOT** be taken from taps that have point of use or point of entry treatment devices designed to remove inorganic contaminants, such as an iron removal filter, reverse osmosis system, or water softener.

Lead and Copper Sampling Pool Form Instructions

Water Supply Name, WSSN, and County: Enter your water supply information.

Standard Number of Sites Required: Enter the standard number of sites you are required to sample based on your population.

Reduced Number of Sites Required: Enter the number of sites you would be required to sample if the MDEQ reduces your monitoring.

People Served	Standard Sites	Reduced Sites
More than 100,000	100	50
10,001 to 100,000	60	30
3,301 to 10,000	40	20
501 to 3,300	20	10
101 to 500	10	5
Fewer than 101	5	5

Address: Enter the street number or other unique identifier (such as lot or unit number) of the sampling site and include the city if the water utility services multiple cities.

Tier, Category, and Structure Type: Enter the appropriate codes from the table below in the Tier, Category, and Structure Type columns to identify the selection criteria for each site.

Tier	Category	Structure Type	Description
Tier 1	A	SFR	Single Family Residence (SFR) with lead service line
	B	SFR	SFR with interior lead plumbing
	C	MFR	Multi-family Residence (MFR) if MFRs comprise at least 20% of total service connections
Tier 2	D	MFR or BLDG	MFR or other building (BLDG) with lead service line
	E	MFR or BLDG	MFR or other BLDG with interior lead plumbing
Tier 3	F	SFR	SFR with copper plumbing with lead solder installed before 1988
Other	OT	SFR, MFR, Or BLDG	If no Tier 1, 2, 3 sites, use sites representative of plumbing commonly found throughout the supply

Service Line and Interior Plumbing Material: Enter the appropriate codes from the table below in the Service Line Material and Interior Plumbing Material columns.

Material		
L	=	Lead
CLS	=	Copper with lead solder installed before July 1988
C	=	Copper installed after July 1988
G	=	Galvanized
P	=	Plastic

Site Validation Method: Enter method used to verify site information (permit records, visual inspection, etc.).

NOTE: It is **highly recommended** that the plan contains more sites than are required for standard monitoring. For example, if the standard number of required sampling sites is 10, list 5 or more additional, appropriately tiered sites that may be used as an alternate if an original site is unavailable.

MICHIGAN DEPARTMENT OF ENVIRONMENTAL QUALITY
DRINKING WATER AND MUNICIPAL ASSISTANCE DIVISION

SAMPLING PLAN – LEAD AND COPPER

Issued under authority of the Michigan Safe Drinking Water Act, 1976 PA 399, and Administrative Rules, as amended. Administrative Rule R 325.10710a requires a water supply to monitor for lead and copper according to a pool of targeted sampling sites in accordance with designated site selection criteria. Complete and submit this form to MDEQ.

Michigan Lead and Copper Rule
Lead and Copper Tap Sample Site Selection Criteria

Community water supplies must identify a pool of lead and copper sampling sites containing **AT LEAST** the number of sites necessary to conduct **STANDARD** monitoring (see instructions for number of required sites). It is highly recommended that the sampling pool contain more sites than required in case routine sites are unavailable at time of sampling. The sampling pool must target high risk sites using the criteria below.

- **Samples must be collected from Tier 1 sites, unless …**
- insufficient Tier 1 sampling sites are available, then **Tier 2** sites must be used, unless …
- insufficient Tier 1 and Tier 2 sampling sites are available, then **Tier 3** sites must be used.
- If no Tier 1, 2, or 3 sites are available, sampling sites must be representative of plumbing materials typically found throughout the water system.

TIER 1 SITES - Single family residences with either: o Lead service lines (LSL)***** o Interior lead plumbing Multiple family residences (MFR) with LSLs or interior lead plumbing may be used as Tier 1 sites when MFR comprise at least 20 percent of the total service connections.
TIER 2 SITES – Other buildings or multiple family residences with either: o Lead service lines***** o Interior lead plumbing
TIER 3 SITES - Single family residences with: o Copper plumbing with lead solder installed before July 1988
OTHER SITES o Sites representative of plumbing materials commonly found throughout the water supply.
*** Priority should be placed on sites with full LSLs, followed by partial LSLs, followed by lead goosenecks or pigtails.**

Also Note:

- Each round of sampling should be conducted at the **SAME** sampling sites unless …
  - a site no longer meets tiering criteria (for example, a site is no longer Tier 1 after having the lead service line replaced); or
  - a site is unavailable (for example, a site has no water service, resident refuses to participate, etc.)
- **DO NOT** sample from outside hose spigots or utility sinks.
  - For residential sites, samples **MUST BE** collected from kitchen or bathroom taps typically used for consumption. For non-residential sites, samples **MUST BE** collected from taps typically used for consumption.
- Samples **MAY NOT** be taken from taps that have point of use or point of entry treatment devices designed to remove inorganic contaminants, such as an iron removal filter, reverse osmosis system, or water softener.

Lead and Copper Sampling Pool Form Instructions

Water Supply Name, WSSN, and County: Enter your water supply information.

Standard Number of Sites Required: Enter the standard number of sites you are required to sample based on your population.

Reduced Number of Sites Required: Enter the number of sites you would be required to sample if the MDEQ reduces your monitoring.

People Served	Standard Sites	Reduced Sites
More than 100,000	100	50
10,001 to 100,000	60	30
3,301 to 10,000	40	20
501 to 3,300	20	10
101 to 500	10	5
Fewer than 101	5	5

Address: Enter the street number or other unique identifier (such as lot or unit number) of the sampling site and include the city if the water utility services multiple cities.

Tier, Category, and Structure Type: Enter the appropriate codes from the table below in the Tier, Category, and Structure Type columns to identify the selection criteria for each site.

Tier	Category	Structure Type	Description
Tier 1	A	SFR	Single Family Residence (SFR) with lead service line
	B	SFR	SFR with interior lead plumbing
	C	MFR	Multi-family Residence (MFR) if MFRs comprise at least 20% of total service connections
Tier 2	D	MFR or BLDG	MFR or other building (BLDG) with lead service line
	E	MFR or BLDG	MFR or other BLDG with interior lead plumbing
Tier 3	F	SFR	SFR with copper plumbing with lead solder installed before 1988
Other	OT	SFR, MFR, Or BLDG	If no Tier 1, 2, 3 sites, use sites representative of plumbing commonly found throughout the supply

Service Line and Interior Plumbing Material: Enter the appropriate codes from the table below in the Service Line Material and Interior Plumbing Material columns.

Material		
L	=	Lead
CLS	=	Copper with lead solder installed before July 1988
C	=	Copper installed after July 1988
G	=	Galvanized
P	=	Plastic

Site Validation Method: Enter method used to verify site information (permit records, visual inspection, etc.).

NOTE: It is **highly recommended** that the plan contains more sites than are required for standard monitoring. For example, if the standard number of required sampling sites is 10, list 5 or more additional, appropriately tiered sites that may be used as an alternate if an original site is unavailable.

Use additional pages for water supplies requiring more sampling sites.

Michigan Lead and Copper Rule
Lead and Copper Tap Sample Site Selection Criteria

Community water supplies must identify a pool of lead and copper sampling sites containing **AT LEAST** the number of sites necessary to conduct **STANDARD** monitoring (see instructions for number of required sites). It is highly recommended that the sampling pool contain more sites than required in case routine sites are unavailable at time of sampling. The sampling pool must target high risk sites using the criteria below.

- **Samples must be collected from Tier 1 sites, unless …**
- insufficient Tier 1 sampling sites are available, then **Tier 2** sites must be used, unless …

- insufficient Tier 1 and Tier 2 sampling sites are available, then **Tier 3** sites must be used.
- If no Tier 1, 2, or 3 sites are available, sampling sites must be representative of plumbing materials typically found throughout the water system.

TIER 1 SITES - Single family residences with either: o Lead service lines (LSL)* o Interior lead plumbing Multiple family residences (MFR) with LSLs or interior lead plumbing may be used as Tier 1 sites when MFR comprise at least 20 percent of the total service connections.
TIER 2 SITES – Other buildings or multiple family residences with either: o Lead service lines* o Interior lead plumbing
TIER 3 SITES - Single family residences with: o Copper plumbing with lead solder installed before July 1988
OTHER SITES o Sites representative of plumbing materials commonly found throughout the water supply.
*** Priority should be placed on sites with full LSLs, followed by partial LSLs, followed by lead goosenecks or pigtails.**

Also Note:

- Each round of sampling should be conducted at the **SAME** sampling sites unless …
  - a site no longer meets tiering criteria (for example, a site is no longer Tier 1 after having the lead service line replaced); or
  - a site is unavailable (for example, a site has no water service, resident refuses to participate, etc.)
- **DO NOT** sample from outside hose spigots or utility sinks.
  - For residential sites, samples **MUST BE** collected from kitchen or bathroom taps typically used for consumption. For non-residential sites, samples **MUST BE** collected from taps typically used for consumption.
- Samples **MAY NOT** be taken from taps that have point of use or point of entry treatment devices designed to remove inorganic contaminants, such as an iron removal filter, reverse osmosis system, or water softener.

Lead and Copper Sampling Pool Form Instructions

Water Supply Name, WSSN, and County: Enter your water supply information.

Standard Number of Sites Required: Enter the standard number of sites you are required to sample based on your population.

Reduced Number of Sites Required: Enter the number of sites you would be required to sample if the MDEQ reduces your monitoring.

People Served	Standard Sites	Reduced Sites
More than 100,000	100	50
10,001 to 100,000	60	30
3,301 to 10,000	40	20
501 to 3,300	20	10
101 to 500	10	5
Fewer than 101	5	5

Address: Enter the street number or other unique identifier (such as lot or unit number) of the sampling site and include the city if the water utility services multiple cities.

Tier, Category, and Structure Type: Enter the appropriate codes from the table below in the Tier, Category, and Structure Type columns to identify the selection criteria for each site.

Tier	Category	Structure Type	Description
Tier 1	A	SFR	Single Family Residence (SFR) with lead service line
	B	SFR	SFR with interior lead plumbing
	C	MFR	Multi-family Residence (MFR) if MFRs comprise at least 20% of total service connections
Tier 2	D	MFR or BLDG	MFR or other building (BLDG) with lead service line
	E	MFR or BLDG	MFR or other BLDG with interior lead plumbing
Tier 3	F	SFR	SFR with copper plumbing with lead solder installed before 1988
Other	OT	SFR, MFR, Or BLDG	If no Tier 1, 2, 3 sites, use sites representative of plumbing commonly found throughout the supply

Service Line and Interior Plumbing Material: Enter the appropriate codes from the table below in the Service Line Material and Interior Plumbing Material columns.

Material		
L	=	Lead
CLS	=	Copper with lead solder installed before July 1988
C	=	Copper installed after July 1988
G	=	Galvanized
P	=	Plastic

Site Validation Method: Enter method used to verify site information (permit records, visual inspection, etc.).

NOTE: It is **highly recommended** that the plan contains more sites than are required for standard monitoring. For example, if the standard number of required sampling sites is 10, list 5 or more additional, appropriately tiered sites that may be used as an alternate if an original site is unavailable.

MICHIGAN DEPARTMENT OF ENVIRONMENTAL QUALITY
DRINKING WATER AND MUNICIPAL ASSISTANCE DIVISION

SAMPLING PLAN – LEAD AND COPPER

Issued under authority of the Michigan Safe Drinking Water Act, 1976 PA 399, and Administrative Rules, as amended. Administrative Rule R 325.10710a requires a water supply to monitor for lead and copper according to a pool of targeted sampling sites in accordance with designated site selection criteria. Complete and submit this form to MDEQ.

Michigan Lead and Copper Rule
Lead and Copper Tap Sample Site Selection Criteria

Community water supplies must identify a pool of lead and copper sampling sites containing **AT LEAST** the number of sites necessary to conduct **STANDARD** monitoring (see instructions for number of required sites). It is highly recommended that the sampling pool contain more sites than required in case routine sites are unavailable at time of sampling. The sampling pool must target high risk sites using the criteria below.

- **Samples must be collected from Tier 1 sites, unless …**
- insufficient Tier 1 sampling sites are available, then **Tier 2** sites must be used, unless …
- insufficient Tier 1 and Tier 2 sampling sites are available, then **Tier 3** sites must be used.
- If no Tier 1, 2, or 3 sites are available, sampling sites must be representative of plumbing materials typically found throughout the water system.

TIER 1 SITES - Single family residences with either: o Lead service lines (LSL)* o Interior lead plumbing Multiple family residences (MFR) with LSLs or interior lead plumbing may be used as Tier 1 sites when MFR comprise at least 20 percent of the total service connections.
TIER 2 SITES – Other buildings or multiple family residences with either: o Lead service lines* o Interior lead plumbing
TIER 3 SITES - Single family residences with: o Copper plumbing with lead solder installed before July 1988
OTHER SITES o Sites representative of plumbing materials commonly found throughout the water supply.
*** Priority should be placed on sites with full LSLs, followed by partial LSLs, followed by lead goosenecks or pigtails.**

Also Note:

- Each round of sampling should be conducted at the **SAME** sampling sites unless …
  - a site no longer meets tiering criteria (for example, a site is no longer Tier 1 after having the lead service line replaced); or
  - a site is unavailable (for example, a site has no water service, resident refuses to participate, etc.)
- **DO NOT** sample from outside hose spigots or utility sinks.
  - For residential sites, samples **MUST BE** collected from kitchen or bathroom taps typically used for consumption. For non-residential sites, samples **MUST BE** collected from taps typically used for consumption.
- Samples **MAY NOT** be taken from taps that have point of use or point of entry treatment devices designed to remove inorganic contaminants, such as an iron removal filter, reverse osmosis system, or water softener.

Lead and Copper Sampling Pool Form Instructions

Water Supply Name, WSSN, and County: Enter your water supply information.

Standard Number of Sites Required: Enter the standard number of sites you are required to sample based on your population.

Reduced Number of Sites Required: Enter the number of sites you would be required to sample if the MDEQ reduces your monitoring.

People Served	Standard Sites	Reduced Sites
More than 100,000	100	50
10,001 to 100,000	60	30
3,301 to 10,000	40	20
501 to 3,300	20	10
101 to 500	10	5
Fewer than 101	5	5

Address: Enter the street number or other unique identifier (such as lot or unit number) of the sampling site and include the city if the water utility services multiple cities.

Tier, Category, and Structure Type: Enter the appropriate codes from the table below in the Tier, Category, and Structure Type columns to identify the selection criteria for each site.

Tier	Category	Structure Type	Description
Tier 1	A	SFR	Single Family Residence (SFR) with lead service line
	B	SFR	SFR with interior lead plumbing
	C	MFR	Multi-family Residence (MFR) if MFRs comprise at least 20% of total service connections
Tier 2	D	MFR or BLDG	MFR or other building (BLDG) with lead service line
	E	MFR or BLDG	MFR or other BLDG with interior lead plumbing
Tier 3	F	SFR	SFR with copper plumbing with lead solder installed before 1988
Other	OT	SFR, MFR, Or BLDG	If no Tier 1, 2, 3 sites, use sites representative of plumbing commonly found throughout the supply

Service Line and Interior Plumbing Material: Enter the appropriate codes from the table below in the Service Line Material and Interior Plumbing Material columns.

Material		
L	=	Lead
CLS	=	Copper with lead solder installed before July 1988
C	=	Copper installed after July 1988
G	=	Galvanized
P	=	Plastic

Site Validation Method: Enter method used to verify site information (permit records, visual inspection, etc.).

NOTE: It is **highly recommended** that the plan contains more sites than are required for standard monitoring. For example, if the standard number of required sampling sites is 10, list 5 or more additional, appropriately tiered sites that may be used as an alternate if an original site is unavailable.

Michigan Lead and Copper Rule
Lead and Copper Tap Sample Site Selection Criteria

Community water supplies must identify a pool of lead and copper sampling sites containing **AT LEAST** the number of sites necessary to conduct **STANDARD** monitoring (see instructions for number of required sites). It is highly recommended that the sampling pool contain more sites than required in case routine sites are unavailable at time of sampling. The sampling pool must target high risk sites using the criteria below.

- **Samples must be collected from Tier 1 sites, unless …**
- insufficient Tier 1 sampling sites are available, then **Tier 2** sites must be used, unless …
- insufficient Tier 1 and Tier 2 sampling sites are available, then **Tier 3** sites must be used.
- If no Tier 1, 2, or 3 sites are available, sampling sites must be representative of plumbing materials typically found throughout the water system.

TIER 1 SITES - Single family residences with either: ○ Lead service lines (LSL)***** ○ Interior lead plumbing Multiple family residences (MFR) with LSLs or interior lead plumbing may be used as Tier 1 sites when MFR comprise at least 20 percent of the total service connections.
TIER 2 SITES – Other buildings or multiple family residences with either: ○ Lead service lines***** ○ Interior lead plumbing
TIER 3 SITES - Single family residences with: ○ Copper plumbing with lead solder installed before July 1988
OTHER SITES ○ Sites representative of plumbing materials commonly found throughout the water supply.
*** Priority should be placed on sites with full LSLs, followed by partial LSLs, followed by lead goosenecks or pigtails.**

Also Note:

- Each round of sampling should be conducted at the **SAME** sampling sites unless …
  - a site no longer meets tiering criteria (for example, a site is no longer Tier 1 after having the lead service line replaced); or
  - a site is unavailable (for example, a site has no water service, resident refuses to participate, etc.)
- **DO NOT** sample from outside hose spigots or utility sinks.
  - For residential sites, samples **MUST BE** collected from kitchen or bathroom taps typically used for consumption. For non-residential sites, samples **MUST BE** collected from taps typically used for consumption.
- Samples **MAY NOT** be taken from taps that have point of use or point of entry treatment devices designed to remove inorganic contaminants, such as an iron removal filter, reverse osmosis

Lead and Copper Sampling Pool Form Instructions

Water Supply Name, WSSN, and County: Enter your water supply information.

Standard Number of Sites Required: Enter the standard number of sites you are required to sample based on your population.

Reduced Number of Sites Required: Enter the number of sites you would be required to sample if the MDEQ reduces your monitoring.

People Served	Standard Sites	Reduced Sites
More than 100,000	100	50
10,001 to 100,000	60	30
3,301 to 10,000	40	20
501 to 3,300	20	10
101 to 500	10	5
Fewer than 101	5	5

Address: Enter the street number or other unique identifier (such as lot or unit number) of the sampling site and include the city if the water utility services multiple cities.

Tier, Category, and Structure Type: Enter the appropriate codes from the table below in the Tier, Category, and Structure Type columns to identify the selection criteria for each site.

Tier	Category	Structure Type	Description
Tier 1	A	SFR	Single Family Residence (SFR) with lead service line
	B	SFR	SFR with interior lead plumbing
	C	MFR	Multi-family Residence (MFR) if MFRs comprise at least 20% of total service connections
Tier 2	D	MFR or BLDG	MFR or other building (BLDG) with lead service line
	E	MFR or BLDG	MFR or other BLDG with interior lead plumbing
Tier 3	F	SFR	SFR with copper plumbing with lead solder installed before 1988
Other	OT	SFR, MFR, Or BLDG	If no Tier 1, 2, 3 sites, use sites representative of plumbing commonly found throughout the supply

Service Line and Interior Plumbing Material: Enter the appropriate codes from the table below in the Service Line Material and Interior Plumbing Material columns.

Material		
L	=	Lead
CLS	=	Copper with lead solder installed before July 1988
C	=	Copper installed after July 1988
G	=	Galvanized
P	=	Plastic

Site Validation Method: Enter method used to verify site information (permit records, visual inspection, etc.).

NOTE: It is **highly recommended** that the plan contains more sites than are required for standard monitoring. For example, if the standard number of required sampling sites is 10, list 5 or more additional, appropriately tiered sites that may be used as an alternate if an original site is unavailable.

MICHIGAN DEPARTMENT OF ENVIRONMENTAL QUALITY
DRINKING WATER AND MUNICIPAL ASSISTANCE DIVISION

SAMPLING PLAN – LEAD AND COPPER

Issued under authority of the Michigan Safe Drinking Water Act, 1976 PA 399, and Administrative Rules, as amended. Administrative Rule R 325.10710a requires a water supply to monitor for lead and copper according to a pool of targeted sampling sites in accordance with designated site selection criteria. Complete and submit this form to MDEQ.

Lead and Copper Tap Sample Site Selection Criteria

Community water supplies must identify a pool of lead and copper sampling sites containing **AT LEAST** the number of sites necessary to conduct **STANDARD** monitoring (see instructions for number of required sites). It is highly recommended that the sampling pool contain more sites than required in case routine sites are unavailable at time of sampling. The sampling pool must target high risk sites using the criteria below.

- **Samples must be collected from Tier 1 sites, unless …**
- insufficient Tier 1 sampling sites are available, then **Tier 2** sites must be used, unless …
- insufficient Tier 1 and Tier 2 sampling sites are available, then **Tier 3** sites must be used.
- If no Tier 1, 2, or 3 sites are available, sampling sites must be representative of plumbing materials typically found throughout the water system.

TIER 1 SITES - Single family residences with either: o Lead service lines (LSL)* o Interior lead plumbing Multiple family residences (MFR) with LSLs or interior lead plumbing may be used as Tier 1 sites when MFR comprise at least 20 percent of the total service connections.
TIER 2 SITES – Other buildings or multiple family residences with either: o Lead service lines* o Interior lead plumbing
TIER 3 SITES - Single family residences with: o Copper plumbing with lead solder installed before July 1988
OTHER SITES o Sites representative of plumbing materials commonly found throughout the water supply.
*** Priority should be placed on sites with full LSLs, followed by partial LSLs, followed by lead goosenecks or pigtails.**

Also Note:

- Each round of sampling should be conducted at the **SAME** sampling sites unless …
  - a site no longer meets tiering criteria (for example, a site is no longer Tier 1 after having the lead service line replaced); or
  - a site is unavailable (for example, a site has no water service, resident refuses to participate, etc.)
- **DO NOT** sample from outside hose spigots or utility sinks.
  - For residential sites, samples **MUST BE** collected from kitchen or bathroom taps typically used for consumption. For non-residential sites, samples **MUST BE** collected from taps typically used for consumption.
- Samples **MAY NOT** be taken from taps that have point of use or point of entry treatment devices designed to remove inorganic contaminants, such as an iron removal filter, reverse osmosis system, or water softener.

Lead and Copper Sampling Pool Form Instructions

Water Supply Name, WSSN, and County: Enter your water supply information.

Standard Number of Sites Required: Enter the standard number of sites you are required to sample based on your population.

Reduced Number of Sites Required: Enter the number of sites you would be required to sample if the MDEQ reduces your monitoring.

People Served	Standard Sites	Reduced Sites
More than 100,000	100	50
10,001 to 100,000	60	30
3,301 to 10,000	40	20
501 to 3,300	20	10
101 to 500	10	5
Fewer than 101	5	5

Address: Enter the street number or other unique identifier (such as lot or unit number) of the sampling site and include the city if the water utility services multiple cities.

Tier, Category, and Structure Type: Enter the appropriate codes from the table below in the Tier, Category, and Structure Type columns to identify the selection criteria for each site.

Tier	Category	Structure Type	Description
Tier 1	A	SFR	Single Family Residence (SFR) with lead service line
	B	SFR	SFR with interior lead plumbing
	C	MFR	Multi-family Residence (MFR) if MFRs comprise at least 20% of total service connections
Tier 2	D	MFR or BLDG	MFR or other building (BLDG) with lead service line
	E	MFR or BLDG	MFR or other BLDG with interior lead plumbing
Tier 3	F	SFR	SFR with copper plumbing with lead solder installed before 1988
Other	OT	SFR, MFR, Or BLDG	If no Tier 1, 2, 3 sites, use sites representative of plumbing commonly found throughout the supply

Service Line and Interior Plumbing Material: Enter the appropriate codes from the table below in the Service Line Material and Interior Plumbing Material columns.

Material		
L	=	Lead
CLS	=	Copper with lead solder installed before July 1988
C	=	Copper installed after July 1988
G	=	Galvanized
P	=	Plastic

Site Validation Method: Enter method used to verify site information (permit records, visual inspection, etc.).

NOTE: It is **highly recommended** that the plan contains more sites than are required for standard monitoring. For example, if the standard number of required sampling sites is 10, list 5 or more additional, appropriately tiered sites that may be used as an alternate if an original site is unavailable.

MICHIGAN COMMUNITY WATER SUPPLY LEAD AND COPPER TAP SAMPLING POOL (cont.)

WSSN: _____ Supply Name: _____ Page _____ of _____

Site No.	Address	Tier Level	Category	Structure Type	Service Line Material	Interior Plumbing Material	Site Validation Method
00	*Ex: 0000 Any Street – Any Town, MI*	*1*	*A*	*SFR*	*L*	*C*	*Visual*

Use additional pages for water supplies requiring more sampling sites.

Michigan Lead and Copper Rule
Lead and Copper Tap Sample Site Selection Criteria

Community water supplies must identify a pool of lead and copper sampling sites containing **AT LEAST** the number of sites necessary to conduct **STANDARD** monitoring (see instructions for number of required sites). It is highly recommended that the sampling pool contain more sites than required in case routine sites are unavailable at time of sampling. The sampling pool must target high risk sites using the criteria below.

- **Samples must be collected from Tier 1 sites, unless …**
- insufficient Tier 1 sampling sites are available, then **Tier 2** sites must be used, unless …
- insufficient Tier 1 and Tier 2 sampling sites are available, then **Tier 3** sites must be used.
- If no Tier 1, 2, or 3 sites are available, sampling sites must be representative of plumbing materials typically found throughout the water system.

TIER 1 SITES - Single family residences with either: o Lead service lines (LSL)***** o Interior lead plumbing Multiple family residences (MFR) with LSLs or interior lead plumbing may be used as Tier 1 sites when MFR comprise at least 20 percent of the total service connections.
TIER 2 SITES – Other buildings or multiple family residences with either: o Lead service lines***** o Interior lead plumbing
TIER 3 SITES - Single family residences with: o Copper plumbing with lead solder installed before July 1988
OTHER SITES o Sites representative of plumbing materials commonly found throughout the water supply.
*** Priority should be placed on sites with full LSLs, followed by partial LSLs, followed by lead goosenecks or pigtails.**

Also Note:

- Each round of sampling should be conducted at the **SAME** sampling sites unless …
  - a site no longer meets tiering criteria (for example, a site is no longer Tier 1 after having the lead service line replaced); or
  - a site is unavailable (for example, a site has no water service, resident refuses to participate, etc.)
- **DO NOT** sample from outside hose spigots or utility sinks.
  - For residential sites, samples **MUST BE** collected from kitchen or bathroom taps typically used for consumption. For non-residential sites, samples **MUST BE** collected from taps typically used for consumption.
- Samples **MAY NOT** be taken from taps that have point of use or point of entry treatment devices designed to remove inorganic contaminants, such as an iron removal filter, reverse osmosis system, or water softener.

Lead and Copper Sampling Pool Form Instructions

Water Supply Name, WSSN, and County: Enter your water supply information.

Standard Number of Sites Required: Enter the standard number of sites you are required to sample based on your population.

Reduced Number of Sites Required: Enter the number of sites you would be required to sample if the MDEQ reduces your monitoring.

People Served	Standard Sites	Reduced Sites
More than 100,000	100	50
10,001 to 100,000	60	30
3,301 to 10,000	40	20
501 to 3,300	20	10
101 to 500	10	5
Fewer than 101	5	5

Address: Enter the street number or other unique identifier (such as lot or unit number) of the sampling site and include the city if the water utility services multiple cities.

Tier, Category, and Structure Type: Enter the appropriate codes from the table below in the Tier, Category, and Structure Type columns to identify the selection criteria for each site.

Tier	Category	Structure Type	Description
Tier 1	A	SFR	Single Family Residence (SFR) with lead service line
	B	SFR	SFR with interior lead plumbing
	C	MFR	Multi-family Residence (MFR) if MFRs comprise at least 20% of total service connections
Tier 2	D	MFR or BLDG	MFR or other building (BLDG) with lead service line
	E	MFR or BLDG	MFR or other BLDG with interior lead plumbing
Tier 3	F	SFR	SFR with copper plumbing with lead solder installed before 1988
Other	OT	SFR, MFR, Or BLDG	If no Tier 1, 2, 3 sites, use sites representative of plumbing commonly found throughout the supply

Service Line and Interior Plumbing Material: Enter the appropriate codes from the table below in the Service Line Material and Interior Plumbing Material columns.

Material		
L	=	Lead
CLS	=	Copper with lead solder installed before July 1988
C	=	Copper installed after July 1988
G	=	Galvanized
P	=	Plastic

Site Validation Method: Enter method used to verify site information (permit records, visual inspection, etc.).

NOTE: It is **highly recommended** that the plan contains more sites than are required for standard monitoring. For example, if the standard number of required sampling sites is 10, list 5 or more additional, appropriately tiered sites that may be used as an alternate if an original site is unavailable.

MICHIGAN DEPARTMENT OF ENVIRONMENTAL QUALITY
DRINKING WATER AND MUNICIPAL ASSISTANCE DIVISION

SAMPLING PLAN – LEAD AND COPPER

Issued under authority of the Michigan Safe Drinking Water Act, 1976 PA 399, and Administrative Rules, as amended. Administrative Rule R 325.10710a requires a water supply to monitor for lead and copper according to a pool of targeted sampling sites in accordance with designated site selection criteria. Complete and submit this form to MDEQ.

Michigan Lead and Copper Rule
Lead and Copper Tap Sample Site Selection Criteria

Community water supplies must identify a pool of lead and copper sampling sites containing **AT LEAST** the number of sites necessary to conduct **STANDARD** monitoring (see instructions for number of required sites). It is highly recommended that the sampling pool contain more sites than required in case routine sites are unavailable at time of sampling. The sampling pool must target high risk sites using the criteria below.

- **Samples must be collected from Tier 1 sites, unless …**
- insufficient Tier 1 sampling sites are available, then **Tier 2** sites must be used, unless …
- insufficient Tier 1 and Tier 2 sampling sites are available, then **Tier 3** sites must be used.
- If no Tier 1, 2, or 3 sites are available, sampling sites must be representative of plumbing materials typically found throughout the water system.

TIER 1 SITES - Single family residences with either: o Lead service lines (LSL)* o Interior lead plumbing Multiple family residences (MFR) with LSLs or interior lead plumbing may be used as Tier 1 sites when MFR comprise at least 20 percent of the total service connections.
TIER 2 SITES – Other buildings or multiple family residences with either: o Lead service lines* o Interior lead plumbing
TIER 3 SITES - Single family residences with: o Copper plumbing with lead solder installed before July 1988
OTHER SITES o Sites representative of plumbing materials commonly found throughout the water supply.
*** Priority should be placed on sites with full LSLs, followed by partial LSLs, followed by lead goosenecks or pigtails.**

Also Note:

- Each round of sampling should be conducted at the **SAME** sampling sites unless …
  - a site no longer meets tiering criteria (for example, a site is no longer Tier 1 after having the lead service line replaced); or
  - a site is unavailable (for example, a site has no water service, resident refuses to participate, etc.)
- **DO NOT** sample from outside hose spigots or utility sinks.
  - For residential sites, samples **MUST BE** collected from kitchen or bathroom taps typically used for consumption. For non-residential sites, samples **MUST BE** collected from taps typically used for consumption.
- Samples **MAY NOT** be taken from taps that have point of use or point of entry treatment devices designed to remove inorganic contaminants, such as an iron removal filter, reverse osmosis system, or water softener.

Lead and Copper Sampling Pool Form Instructions

Water Supply Name, WSSN, and County: Enter your water supply information.

Standard Number of Sites Required: Enter the standard number of sites you are required to sample based on your population.

Reduced Number of Sites Required: Enter the number of sites you would be required to sample if the MDEQ reduces your monitoring.

People Served	Standard Sites	Reduced Sites
More than 100,000	100	50
10,001 to 100,000	60	30
3,301 to 10,000	40	20
501 to 3,300	20	10
101 to 500	10	5
Fewer than 101	5	5

Address: Enter the street number or other unique identifier (such as lot or unit number) of the sampling site and include the city if the water utility services multiple cities.

Tier, Category, and Structure Type: Enter the appropriate codes from the table below in the Tier, Category, and Structure Type columns to identify the selection criteria for each site.

Tier	Category	Structure Type	Description
Tier 1	A	SFR	Single Family Residence (SFR) with lead service line
	B	SFR	SFR with interior lead plumbing
	C	MFR	Multi-family Residence (MFR) if MFRs comprise at least 20% of total service connections
Tier 2	D	MFR or BLDG	MFR or other building (BLDG) with lead service line
	E	MFR or BLDG	MFR or other BLDG with interior lead plumbing
Tier 3	F	SFR	SFR with copper plumbing with lead solder installed before 1988
Other	OT	SFR, MFR, Or BLDG	If no Tier 1, 2, 3 sites, use sites representative of plumbing commonly found throughout the supply

Service Line and Interior Plumbing Material: Enter the appropriate codes from the table below in the Service Line Material and Interior Plumbing Material columns.

Material		
L	=	Lead
CLS	=	Copper with lead solder installed before July 1988
C	=	Copper installed after July 1988
G	=	Galvanized
P	=	Plastic

RECEIVED
Sept 16 2020
EGLE-DWEHD-CWSS-LCU

Site Validation Method: Enter method used to verify site information (permit records, visual inspection, etc.).

NOTE: It is **highly recommended** that the plan contains more sites than are required for standard monitoring. For example, if the standard number of required sampling sites is 10, list 5 or more additional, appropriately tiered sites that may be used as an alternate if an original site is unavailable.

MICHIGAN DEPARTMENT OF ENVIRONMENTAL QUALITY
DRINKING WATER AND MUNICIPAL ASSISTANCE DIVISION

SAMPLING PLAN – LEAD AND COPPER

Issued under authority of the Michigan Safe Drinking Water Act, 1976 PA 399, and Administrative Rules, as amended. Administrative Rule R 325.10710a requires a water supply to monitor for lead and copper according to a pool of targeted sampling sites in accordance with designated site selection criteria. Complete and submit this form to MDEQ.

WSSN: _____ Supply Name: _____ Page _____ of _____

Michigan Lead and Copper Rule
Lead and Copper Tap Sample Site Selection Criteria

Community water supplies must identify a pool of lead and copper sampling sites containing **AT LEAST** the number of sites necessary to conduct **STANDARD** monitoring (see instructions for number of required sites). It is highly recommended that the sampling pool contain more sites than required in case routine sites are unavailable at time of sampling. The sampling pool must target high risk sites using the criteria below.

- **Samples must be collected from Tier 1 sites, unless …**
- insufficient Tier 1 sampling sites are available, then **Tier 2** sites must be used, unless …
- insufficient Tier 1 and Tier 2 sampling sites are available, then **Tier 3** sites must be used.
- If no Tier 1, 2, or 3 sites are available, sampling sites must be representative of plumbing materials typically found throughout the water system.

TIER 1 SITES - Single family residences with either: o Lead service lines (LSL)***** o Interior lead plumbing Multiple family residences (MFR) with LSLs or interior lead plumbing may be used as Tier 1 sites when MFR comprise at least 20 percent of the total service connections.
TIER 2 SITES – Other buildings or multiple family residences with either: o Lead service lines***** o Interior lead plumbing
TIER 3 SITES - Single family residences with: o Copper plumbing with lead solder installed before July 1988
OTHER SITES o Sites representative of plumbing materials commonly found throughout the water supply.
*** Priority should be placed on sites with full LSLs, followed by partial LSLs, followed by lead goosenecks or pigtails.**

Also Note:

- Each round of sampling should be conducted at the **SAME** sampling sites unless …
  - a site no longer meets tiering criteria (for example, a site is no longer Tier 1 after having the lead service line replaced); or
  - a site is unavailable (for example, a site has no water service, resident refuses to participate, etc.)

- **DO NOT** sample from outside hose spigots or utility sinks.
    - For residential sites, samples **MUST BE** collected from kitchen or bathroom taps typically used for consumption. For non-residential sites, samples **MUST BE** collected from taps typically used for consumption.
- Samples **MAY NOT** be taken from taps that have point of use or point of entry treatment devices designed to remove inorganic contaminants, such as an iron removal filter, reverse osmosis system, or water softener.

Lead and Copper Sampling Pool Form Instructions

Water Supply Name, WSSN, and County: Enter your water supply information.

Standard Number of Sites Required: Enter the standard number of sites you are required to sample based on your population.

Reduced Number of Sites Required: Enter the number of sites you would be required to sample if the MDEQ reduces your monitoring.

People Served	Standard Sites	Reduced Sites
More than 100,000	100	50
10,001 to 100,000	60	30
3,301 to 10,000	40	20
501 to 3,300	20	10
101 to 500	10	5
Fewer than 101	5	5

Address: Enter the street number or other unique identifier (such as lot or unit number) of the sampling site and include the city if the water utility services multiple cities.

Tier, Category, and Structure Type: Enter the appropriate codes from the table below in the Tier, Category, and Structure Type columns to identify the selection criteria for each site.

Tier	Category	Structure Type	Description
Tier 1	A	SFR	Single Family Residence (SFR) with lead service line
	B	SFR	SFR with interior lead plumbing
	C	MFR	Multi-family Residence (MFR) if MFRs comprise at least 20% of total service connections
Tier 2	D	MFR or BLDG	MFR or other building (BLDG) with lead service line
	E	MFR or BLDG	MFR or other BLDG with interior lead plumbing
Tier 3	F	SFR	SFR with copper plumbing with lead solder installed before 1988
Other	OT	SFR, MFR, Or BLDG	If no Tier 1, 2, 3 sites, use sites representative of plumbing commonly found throughout the supply

Service Line and Interior Plumbing Material: Enter the appropriate codes from the table below in the Service Line Material and Interior Plumbing Material columns.

Material		
L	=	Lead
CLS	=	Copper with lead solder installed before July 1988
C	=	Copper installed after July 1988
G	=	Galvanized
P	=	Plastic

Site Validation Method: Enter method used to verify site information (permit records, visual inspection, etc.).

NOTE: It is **highly recommended** that the plan contains more sites than are required for standard monitoring. For example, if the standard number of required sampling sites is 10, list 5 or more additional, appropriately tiered sites that may be used as an alternate if an original site is unavailable.

MICHIGAN DEPARTMENT OF ENVIRONMENTAL QUALITY
DRINKING WATER AND MUNICIPAL ASSISTANCE DIVISION

SAMPLING PLAN – LEAD AND COPPER

Issued under authority of the Michigan Safe Drinking Water Act, 1976 PA 399, and Administrative Rules, as amended. Administrative Rule R 325.10710a requires a water supply to monitor for lead and copper according to a pool of targeted sampling sites in accordance with designated site selection criteria. Complete and submit this form to MDEQ.

Michigan Lead and Copper Rule
Lead and Copper Tap Sample Site Selection Criteria

Community water supplies must identify a pool of lead and copper sampling sites containing **AT LEAST** the number of sites necessary to conduct **STANDARD** monitoring (see instructions for number of required sites). It is highly recommended that the sampling pool contain more sites than required in case routine sites are unavailable at time of sampling. The sampling pool must target high risk sites using the criteria below.

- **Samples must be collected from Tier 1 sites, unless …**
- insufficient Tier 1 sampling sites are available, then **Tier 2** sites must be used, unless …
- insufficient Tier 1 and Tier 2 sampling sites are available, then **Tier 3** sites must be used.
- If no Tier 1, 2, or 3 sites are available, sampling sites must be representative of plumbing materials typically found throughout the water system.

TIER 1 SITES - Single family residences with either: o Lead service lines (LSL)***** o Interior lead plumbing Multiple family residences (MFR) with LSLs or interior lead plumbing may be used as Tier 1 sites when MFR comprise at least 20 percent of the total service connections.
TIER 2 SITES – Other buildings or multiple family residences with either: o Lead service lines***** o Interior lead plumbing
TIER 3 SITES - Single family residences with: o Copper plumbing with lead solder installed before July 1988
OTHER SITES o Sites representative of plumbing materials commonly found throughout the water supply.
*** Priority should be placed on sites with full LSLs, followed by partial LSLs, followed by lead goosenecks or pigtails.**

Also Note:

- Each round of sampling should be conducted at the **SAME** sampling sites unless …
  - a site no longer meets tiering criteria (for example, a site is no longer Tier 1 after having the lead service line replaced); or
  - a site is unavailable (for example, a site has no water service, resident refuses to participate, etc.)
- **DO NOT** sample from outside hose spigots or utility sinks.
  - For residential sites, samples **MUST BE** collected from kitchen or bathroom taps typically used for consumption. For non-residential sites, samples **MUST BE** collected from taps typically used for consumption.
- Samples **MAY NOT** be taken from taps that have point of use or point of entry treatment devices designed to remove inorganic contaminants, such as an iron removal filter, reverse osmosis system, or water softener.

Lead and Copper Sampling Pool Form Instructions

Water Supply Name, WSSN, and County: Enter your water supply information.

Standard Number of Sites Required: Enter the standard number of sites you are required to sample based on your population.

Reduced Number of Sites Required: Enter the number of sites you would be required to sample if the MDEQ reduces your monitoring.

People Served	Standard Sites	Reduced Sites
More than 100,000	100	50
10,001 to 100,000	60	30
3,301 to 10,000	40	20
501 to 3,300	20	10
101 to 500	10	5
Fewer than 101	5	5

Address: Enter the street number or other unique identifier (such as lot or unit number) of the sampling site and include the city if the water utility services multiple cities.

Tier, Category, and Structure Type: Enter the appropriate codes from the table below in the Tier, Category, and Structure Type columns to identify the selection criteria for each site.

Tier	Category	Structure Type	Description
Tier 1	A	SFR	Single Family Residence (SFR) with lead service line
	B	SFR	SFR with interior lead plumbing
	C	MFR	Multi-family Residence (MFR) if MFRs comprise at least 20% of total service connections
Tier 2	D	MFR or BLDG	MFR or other building (BLDG) with lead service line
	E	MFR or BLDG	MFR or other BLDG with interior lead plumbing
Tier 3	F	SFR	SFR with copper plumbing with lead solder installed before 1988
Other	OT	SFR, MFR, Or BLDG	If no Tier 1, 2, 3 sites, use sites representative of plumbing commonly found throughout the supply

Service Line and Interior Plumbing Material: Enter the appropriate codes from the table below in the Service Line Material and Interior Plumbing Material columns.

Material		
L	=	Lead
CLS	=	Copper with lead solder installed before July 1988
C	=	Copper installed after July 1988
G	=	Galvanized
P	=	Plastic

Site Validation Method: Enter method used to verify site information (permit records, visual inspection, etc.).

NOTE: It is **highly recommended** that the plan contains more sites than are required for standard monitoring. For example, if the standard number of required sampling sites is 10, list 5 or more additional, appropriately tiered sites that may be used as an alternate if an original site is unavailable.

MICHIGAN DEPARTMENT OF ENVIRONMENTAL QUALITY
DRINKING WATER AND MUNICIPAL ASSISTANCE DIVISION

SAMPLING PLAN – LEAD AND COPPER

Issued under authority of the Michigan Safe Drinking Water Act, 1976 PA 399, and Administrative Rules, as amended. Administrative Rule R 325.10710a requires a water supply to monitor for lead and copper according to a pool of targeted sampling sites in accordance with designated site selection criteria. Complete and submit this form to MDEQ.

Use additional pages for water supplies requiring more sampling sites.

Michigan Lead and Copper Rule

Lead and Copper Tap Sample Site Selection Criteria

Community water supplies must identify a pool of lead and copper sampling sites containing **AT LEAST** the number of sites necessary to conduct **STANDARD** monitoring (see instructions for number of required sites). It is highly recommended that the sampling pool contain more sites than required in case routine sites are unavailable at time of sampling. The sampling pool must target high risk sites using the criteria below.

- **Samples must be collected from Tier 1 sites, unless …**
- insufficient Tier 1 sampling sites are available, then **Tier 2** sites must be used, unless …
- insufficient Tier 1 and Tier 2 sampling sites are available, then **Tier 3** sites must be used.
- If no Tier 1, 2, or 3 sites are available, sampling sites must be representative of plumbing materials typically found throughout the water system.

TIER 1 SITES - Single family residences with either: o Lead service lines (LSL)***** o Interior lead plumbing Multiple family residences (MFR) with LSLs or interior lead plumbing may be used as Tier 1 sites when MFR comprise at least 20 percent of the total service connections.
TIER 2 SITES – Other buildings or multiple family residences with either: o Lead service lines***** o Interior lead plumbing
TIER 3 SITES - Single family residences with: o Copper plumbing with lead solder installed before July 1988
OTHER SITES o Sites representative of plumbing materials commonly found throughout the water supply.
*** Priority should be placed on sites with full LSLs, followed by partial LSLs, followed by lead goosenecks or pigtails.**

Also Note:

- Each round of sampling should be conducted at the **SAME** sampling sites unless …
  - a site no longer meets tiering criteria (for example, a site is no longer Tier 1 after having the lead service line replaced); or
  - a site is unavailable (for example, a site has no water service, resident refuses to participate, etc.)
- **DO NOT** sample from outside hose spigots or utility sinks.
  - For residential sites, samples **MUST BE** collected from kitchen or bathroom taps typically used for consumption. For non-residential sites, samples **MUST BE** collected from taps typically used for consumption.
- Samples **MAY NOT** be taken from taps that have point of use or point of entry treatment devices designed to remove inorganic contaminants, such as an iron removal filter, reverse osmosis system, or water softener.

Lead and Copper Sampling Pool Form Instructions

Water Supply Name, WSSN, and County: Enter your water supply information.

Standard Number of Sites Required: Enter the standard number of sites you are required to sample based on your population.

Reduced Number of Sites Required: Enter the number of sites you would be required to sample if the MDEQ reduces your monitoring.

People Served	Standard Sites	Reduced Sites
More than 100,000	100	50
10,001 to 100,000	60	30
3,301 to 10,000	40	20
501 to 3,300	20	10
101 to 500	10	5
Fewer than 101	5	5

Address: Enter the street number or other unique identifier (such as lot or unit number) of the sampling site and include the city if the water utility services multiple cities.

Tier, Category, and Structure Type: Enter the appropriate codes from the table below in the Tier, Category, and Structure Type columns to identify the selection criteria for each site.

Tier	Category	Structure Type	Description
Tier 1	A	SFR	Single Family Residence (SFR) with lead service line
	B	SFR	SFR with interior lead plumbing
	C	MFR	Multi-family Residence (MFR) if MFRs comprise at least 20% of total service connections
Tier 2	D	MFR or BLDG	MFR or other building (BLDG) with lead service line
	E	MFR or BLDG	MFR or other BLDG with interior lead plumbing
Tier 3	F	SFR	SFR with copper plumbing with lead solder installed before 1988
Other	OT	SFR, MFR, Or BLDG	If no Tier 1, 2, 3 sites, use sites representative of plumbing commonly found throughout the supply

Service Line and Interior Plumbing Material: Enter the appropriate codes from the table below in the Service Line Material and Interior Plumbing Material columns.

Material		
L	=	Lead
CLS	=	Copper with lead solder installed before July 1988
C	=	Copper installed after July 1988
G	=	Galvanized
P	=	Plastic

Site Validation Method: Enter method used to verify site information (permit records, visual inspection, etc.).

NOTE: It is **highly recommended** that the plan contains more sites than are required for standard monitoring. For example, if the standard number of required sampling sites is 10, list 5 or more additional, appropriately tiered sites that may be used as an alternate if an original site is unavailable.

MICHIGAN DEPARTMENT OF ENVIRONMENTAL QUALITY
DRINKING WATER AND MUNICIPAL ASSISTANCE DIVISION

SAMPLING PLAN – LEAD AND COPPER

Issued under authority of the Michigan Safe Drinking Water Act, 1976 PA 399, and Administrative Rules, as amended. Administrative Rule R 325.10710a requires a water supply to monitor for lead and copper according to a pool of targeted sampling sites in accordance with designated site selection criteria. Complete and submit this form to MDEQ.

Michigan Lead and Copper Rule
Lead and Copper Tap Sample Site Selection Criteria

Community water supplies must identify a pool of lead and copper sampling sites containing **AT LEAST** the number of sites necessary to conduct **STANDARD** monitoring (see instructions for number of required sites). It is highly recommended that the sampling pool contain more sites than required in case routine sites are unavailable at time of sampling. The sampling pool must target high risk sites using the criteria below.

- **Samples must be collected from Tier 1 sites, unless …**
- insufficient Tier 1 sampling sites are available, then **Tier 2** sites must be used, unless …
- insufficient Tier 1 and Tier 2 sampling sites are available, then **Tier 3** sites must be used.
- If no Tier 1, 2, or 3 sites are available, sampling sites must be representative of plumbing materials typically found throughout the water system.

TIER 1 SITES - Single family residences with either: o Lead service lines (LSL)***** o Interior lead plumbing Multiple family residences (MFR) with LSLs or interior lead plumbing may be used as Tier 1 sites when MFR comprise at least 20 percent of the total service connections.
TIER 2 SITES – Other buildings or multiple family residences with either: o Lead service lines***** o Interior lead plumbing
TIER 3 SITES - Single family residences with: o Copper plumbing with lead solder installed before July 1988
OTHER SITES o Sites representative of plumbing materials commonly found throughout the water supply.
*** Priority should be placed on sites with full LSLs, followed by partial LSLs, followed by lead goosenecks or pigtails.**

Also Note:

- Each round of sampling should be conducted at the **SAME** sampling sites unless …
  - a site no longer meets tiering criteria (for example, a site is no longer Tier 1 after having the lead service line replaced); or
  - a site is unavailable (for example, a site has no water service, resident refuses to participate, etc.)
- **DO NOT** sample from outside hose spigots or utility sinks.
  - For residential sites, samples **MUST BE** collected from kitchen or bathroom taps typically used for consumption. For non-residential sites, samples **MUST BE** collected from taps typically used for consumption.
- Samples **MAY NOT** be taken from taps that have point of use or point of entry treatment devices designed to remove inorganic contaminants, such as an iron removal filter, reverse osmosis system, or water softener.

Lead and Copper Sampling Pool Form Instructions

Water Supply Name, WSSN, and County: Enter your water supply information.

Standard Number of Sites Required: Enter the standard number of sites you are required to sample based on your population.

Reduced Number of Sites Required: Enter the number of sites you would be required to sample if the MDEQ reduces your monitoring.

People Served	Standard Sites	Reduced Sites
More than 100,000	100	50
10,001 to 100,000	60	30
3,301 to 10,000	40	20
501 to 3,300	20	10
101 to 500	10	5
Fewer than 101	5	5

Address: Enter the street number or other unique identifier (such as lot or unit number) of the sampling site and include the city if the water utility services multiple cities.

Tier, Category, and Structure Type: Enter the appropriate codes from the table below in the Tier, Category, and Structure Type columns to identify the selection criteria for each site.

Tier	Category	Structure Type	Description
Tier 1	A	SFR	Single Family Residence (SFR) with lead service line
	B	SFR	SFR with interior lead plumbing
	C	MFR	Multi-family Residence (MFR) if MFRs comprise at least 20% of total service connections
Tier 2	D	MFR or BLDG	MFR or other building (BLDG) with lead service line
	E	MFR or BLDG	MFR or other BLDG with interior lead plumbing
Tier 3	F	SFR	SFR with copper plumbing with lead solder installed before 1988
Other	OT	SFR, MFR, Or BLDG	If no Tier 1, 2, 3 sites, use sites representative of plumbing commonly found throughout the supply

Service Line and Interior Plumbing Material: Enter the appropriate codes from the table below in the Service Line Material and Interior Plumbing Material columns.

Material		
L	=	Lead
CLS	=	Copper with lead solder installed before July 1988
C	=	Copper installed after July 1988
G	=	Galvanized
P	=	Plastic

Site Validation Method: Enter method used to verify site information (permit records, visual inspection, etc.).

NOTE: It is **highly recommended** that the plan contains more sites than are required for standard monitoring. For example, if the standard number of required sampling sites is 10, list 5 or more additional, appropriately tiered sites that may be used as an alternate if an original site is unavailable.

Michigan Lead and Copper Rule
Lead and Copper Tap Sample Site Selection Criteria

Community water supplies must identify a pool of lead and copper sampling sites containing **AT LEAST** the number of sites necessary to conduct **STANDARD** monitoring (see instructions for number of required sites). It is highly recommended that the sampling pool contain more sites than required in case routine sites are unavailable at time of sampling. The sampling pool must target high risk sites using the criteria below.

- **Samples must be collected from Tier 1 sites, unless …**
- insufficient Tier 1 sampling sites are available, then **Tier 2** sites must be used, unless …
- insufficient Tier 1 and Tier 2 sampling sites are available, then **Tier 3** sites must be used.
- If no Tier 1, 2, or 3 sites are available, sampling sites must be representative of plumbing materials typically found throughout the water system.

TIER 1 SITES - Single family residences with either: o Lead service lines (LSL)* o Interior lead plumbing Multiple family residences (MFR) with LSLs or interior lead plumbing may be used as Tier 1 sites when MFR comprise at least 20 percent of the total service connections.
TIER 2 SITES – Other buildings or multiple family residences with either: o Lead service lines* o Interior lead plumbing
TIER 3 SITES - Single family residences with: o Copper plumbing with lead solder installed before July 1988
OTHER SITES o Sites representative of plumbing materials commonly found throughout the water supply.
*** Priority should be placed on sites with full LSLs, followed by partial LSLs, followed by lead goosenecks or pigtails.**

Also Note:

- Each round of sampling should be conducted at the **SAME** sampling sites unless …
  - a site no longer meets tiering criteria (for example, a site is no longer Tier 1 after having the lead service line replaced); or
  - a site is unavailable (for example, a site has no water service, resident refuses to participate, etc.)
- **DO NOT** sample from outside hose spigots or utility sinks.
  - For residential sites, samples **MUST BE** collected from kitchen or bathroom taps typically used for consumption. For non-residential sites, samples **MUST BE** collected from taps typically used for consumption.
- Samples **MAY NOT** be taken from taps that have point of use or point of entry treatment devices designed to remove inorganic contaminants, such as an iron removal filter, reverse osmosis system, or water softener.

Lead and Copper Sampling Pool Form Instructions

Water Supply Name, WSSN, and County: Enter your water supply information.

Standard Number of Sites Required: Enter the standard number of sites you are required to sample based on your population.

Reduced Number of Sites Required: Enter the number of sites you would be required to sample if the MDEQ reduces your monitoring.

People Served	Standard Sites	Reduced Sites
More than 100,000	100	50
10,001 to 100,000	60	30
3,301 to 10,000	40	20
501 to 3,300	20	10
101 to 500	10	5
Fewer than 101	5	5

Address: Enter the street number or other unique identifier (such as lot or unit number) of the sampling site and include the city if the water utility services multiple cities.

Tier, Category, and Structure Type: Enter the appropriate codes from the table below in the Tier, Category, and Structure Type columns to identify the selection criteria for each site.

Tier	Category	Structure Type	Description
Tier 1	A	SFR	Single Family Residence (SFR) with lead service line
	B	SFR	SFR with interior lead plumbing
	C	MFR	Multi-family Residence (MFR) if MFRs comprise at least 20% of total service connections
Tier 2	D	MFR or BLDG	MFR or other building (BLDG) with lead service line
	E	MFR or BLDG	MFR or other BLDG with interior lead plumbing
Tier 3	F	SFR	SFR with copper plumbing with lead solder installed before 1988
Other	OT	SFR, MFR, Or BLDG	If no Tier 1, 2, 3 sites, use sites representative of plumbing commonly found throughout the supply

Service Line and Interior Plumbing Material: Enter the appropriate codes from the table below in the Service Line Material and Interior Plumbing Material columns.

Material		
L	=	Lead
CLS	=	Copper with lead solder installed before July 1988
C	=	Copper installed after July 1988
G	=	Galvanized
P	=	Plastic

SEP 1 0 2020

Site Validation Method: Enter method used to verify site information (permit records, visual inspection, etc.).

NOTE: It is **highly recommended** that the plan contains more sites than are required for standard monitoring. For example, if the standard number of required sampling sites is 10, list 5 or more additional, appropriately tiered sites that may be used as an alternate if an original site is unavailable.

Michigan Lead and Copper Rule
Lead and Copper Tap Sample Site Selection Criteria

Community water supplies must identify a pool of lead and copper sampling sites containing **AT LEAST** the number of sites necessary to conduct **STANDARD** monitoring (see instructions for number of required sites). It is highly recommended that the sampling pool contain more sites than required in case routine sites are unavailable at time of sampling. The sampling pool must target high risk sites using the criteria below.

- **Samples must be collected from Tier 1 sites, unless …**
- insufficient Tier 1 sampling sites are available, then **Tier 2** sites must be used, unless …
- insufficient Tier 1 and Tier 2 sampling sites are available, then **Tier 3** sites must be used.
- If no Tier 1, 2, or 3 sites are available, sampling sites must be representative of plumbing materials typically found throughout the water system.

TIER 1 SITES - Single family residences with either: ○ Lead service lines (LSL)* ○ Interior lead plumbing Multiple family residences (MFR) with LSLs or interior lead plumbing may be used as Tier 1 sites when MFR comprise at least 20 percent of the total service connections.
TIER 2 SITES – Other buildings or multiple family residences with either: ○ Lead service lines* ○ Interior lead plumbing
TIER 3 SITES - Single family residences with: ○ Copper plumbing with lead solder installed before July 1988
OTHER SITES ○ Sites representative of plumbing materials commonly found throughout the water supply.
*** Priority should be placed on sites with full LSLs, followed by partial LSLs, followed by lead goosenecks or pigtails.**

Also Note:

- Each round of sampling should be conducted at the **SAME** sampling sites unless …
  - a site no longer meets tiering criteria (for example, a site is no longer Tier 1 after having the lead service line replaced); or
  - a site is unavailable (for example, a site has no water service, resident refuses to participate, etc.)
- **DO NOT** sample from outside hose spigots or utility sinks.
  - For residential sites, samples **MUST BE** collected from kitchen or bathroom taps typically used for consumption. For non-residential sites, samples **MUST BE** collected from taps typically used for consumption.
- Samples **MAY NOT** be taken from taps that have point of use or point of entry treatment devices designed to remove inorganic contaminants, such as an iron removal filter, reverse osmosis system, or water softener.

Michigan Lead and Copper Rule
Lead and Copper Tap Sample Site Selection Criteria

Community water supplies must identify a pool of lead and copper sampling sites containing **AT LEAST** the number of sites necessary to conduct **STANDARD** monitoring (see instructions for number of required sites). It is highly recommended that the sampling pool contain more sites than required in case routine sites are unavailable at time of sampling. The sampling pool must target high risk sites using the criteria below.

- **Samples must be collected from Tier 1 sites, unless …**
- insufficient Tier 1 sampling sites are available, then **Tier 2** sites must be used, unless …
- insufficient Tier 1 and Tier 2 sampling sites are available, then **Tier 3** sites must be used.
- If no Tier 1, 2, or 3 sites are available, sampling sites must be representative of plumbing materials typically found throughout the water system.

TIER 1 SITES - Single family residences with either: ○ Lead service lines (LSL)* ○ Interior lead plumbing Multiple family residences (MFR) with LSLs or interior lead plumbing may be used as Tier 1 sites when MFR comprise at least 20 percent of the total service connections.
TIER 2 SITES – Other buildings or multiple family residences with either: ○ Lead service lines* ○ Interior lead plumbing
TIER 3 SITES - Single family residences with: ○ Copper plumbing with lead solder installed before July 1988
OTHER SITES ○ Sites representative of plumbing materials commonly found throughout the water supply.
*** Priority should be placed on sites with full LSLs, followed by partial LSLs, followed by lead goosenecks or pigtails.**

Also Note:

- Each round of sampling should be conducted at the **SAME** sampling sites unless …
  - a site no longer meets tiering criteria (for example, a site is no longer Tier 1 after having the lead service line replaced); or
  - a site is unavailable (for example, a site has no water service, resident refuses to participate, etc.)
- **DO NOT** sample from outside hose spigots or utility sinks.
  - For residential sites, samples **MUST BE** collected from kitchen or bathroom taps typically used for consumption. For non-residential sites, samples **MUST BE** collected from taps typically used for consumption.
- Samples **MAY NOT** be taken from taps that have point of use or point of entry treatment devices designed to remove inorganic contaminants, such as an iron removal filter, reverse osmosis system, or water softener.

Lead and Copper Sampling Pool Form Instructions

Water Supply Name, WSSN, and County: Enter your water supply information.

Standard Number of Sites Required: Enter the standard number of sites you are required to sample based on your population.

Reduced Number of Sites Required: Enter the number of sites you would be required to sample if the MDEQ reduces your monitoring.

People Served	Standard Sites	Reduced Sites
More than 100,000	100	50
10,001 to 100,000	60	30
3,301 to 10,000	40	20
501 to 3,300	20	10
101 to 500	10	5
Fewer than 101	5	5

Address: Enter the street number or other unique identifier (such as lot or unit number) of the sampling site and include the city if the water utility services multiple cities.

Tier, Category, and Structure Type: Enter the appropriate codes from the table below in the Tier, Category, and Structure Type columns to identify the selection criteria for each site.

Tier	Category	Structure Type	Description
Tier 1	A	SFR	Single Family Residence (SFR) with lead service line
	B	SFR	SFR with interior lead plumbing
	C	MFR	Multi-family Residence (MFR) if MFRs comprise at least 20% of total service connections
Tier 2	D	MFR or BLDG	MFR or other building (BLDG) with lead service line
	E	MFR or BLDG	MFR or other BLDG with interior lead plumbing
Tier 3	F	SFR	SFR with copper plumbing with lead solder installed before 1988
Other	OT	SFR, MFR, Or BLDG	If no Tier 1, 2, 3 sites, use sites representative of plumbing commonly found throughout the supply

Service Line and Interior Plumbing Material: Enter the appropriate codes from the table below in the Service Line Material and Interior Plumbing Material columns.

Material		
L	=	Lead
CLS	=	Copper with lead solder installed before July 1988
C	=	Copper installed after July 1988
G	=	Galvanized
P	=	Plastic

Site Validation Method: Enter method used to verify site information (permit records, visual inspection, etc.).

NOTE: It is **highly recommended** that the plan contains more sites than are required for standard monitoring. For example, if the standard number of required sampling sites is 10, list 5 or more additional, appropriately tiered sites that may be used as an alternate if an original site is unavailable.

MICHIGAN DEPARTMENT OF ENVIRONMENTAL QUALITY
DRINKING WATER AND MUNICIPAL ASSISTANCE DIVISION

SAMPLING PLAN – LEAD AND COPPER

Issued under authority of the Michigan Safe Drinking Water Act, 1976 PA 399, and Administrative Rules, as amended. Administrative Rule R 325.10710a requires a water supply to monitor for lead and copper according to a pool of targeted sampling sites in accordance with designated site selection criteria. Complete and submit this form to MDEQ.

MICHIGAN COMMUNITY WATER SUPPLY LEAD AND COPPER TAP SAMPLING POOL (cont.)

WSSN: _____ **Supply Name:** _____ **Page** _____ **of** _____

Site No.	Address	Tier Level	Category	Structure Type	Service Line Material	Interior Plumbing Material	Site Validation Method
00	*Ex: 0000 Any Street – Any Town, MI*	*1*	*A*	*SFR*	*L*	*C*	*Visual*

Use additional pages for water supplies requiring more sampling sites.

Michigan Lead and Copper Rule
Lead and Copper Tap Sample Site Selection Criteria

Community water supplies must identify a pool of lead and copper sampling sites containing **AT LEAST** the number of sites necessary to conduct **STANDARD** monitoring (see instructions for number of required sites). It is highly recommended that the sampling pool contain more sites than required in case routine sites are unavailable at time of sampling. The sampling pool must target high risk sites using the criteria below.

- **Samples must be collected from Tier 1 sites, unless …**
- insufficient Tier 1 sampling sites are available, then **Tier 2** sites must be used, unless …
- insufficient Tier 1 and Tier 2 sampling sites are available, then **Tier 3** sites must be used.
- If no Tier 1, 2, or 3 sites are available, sampling sites must be representative of plumbing materials typically found throughout the water system.

TIER 1 SITES - Single family residences with either: ○ Lead service lines (LSL)* ○ Interior lead plumbing Multiple family residences (MFR) with LSLs or interior lead plumbing may be used as Tier 1 sites when MFR comprise at least 20 percent of the total service connections.
TIER 2 SITES – Other buildings or multiple family residences with either: ○ Lead service lines* ○ Interior lead plumbing
TIER 3 SITES - Single family residences with: ○ Copper plumbing with lead solder installed before July 1988
OTHER SITES ○ Sites representative of plumbing materials commonly found throughout the water supply.
*** Priority should be placed on sites with full LSLs, followed by partial LSLs, followed by lead goosenecks or pigtails.**

Also Note:

- Each round of sampling should be conducted at the **SAME** sampling sites unless …
  - a site no longer meets tiering criteria (for example, a site is no longer Tier 1 after having the lead service line replaced); or
  - a site is unavailable (for example, a site has no water service, resident refuses to participate, etc.)
- **DO NOT** sample from outside hose spigots or utility sinks.
  - For residential sites, samples **MUST BE** collected from kitchen or bathroom taps typically used for consumption. For non-residential sites, samples **MUST BE** collected from taps typically used for consumption.
- Samples **MAY NOT** be taken from taps that have point of use or point of entry treatment devices designed to remove inorganic contaminants, such as an iron removal filter, reverse osmosis system, or water softener.

Lead and Copper Sampling Pool Form Instructions

Water Supply Name, WSSN, and County: Enter your water supply information.

Standard Number of Sites Required: Enter the standard number of sites you are required to sample based on your population.

Reduced Number of Sites Required: Enter the number of sites you would be required to sample if the MDEQ reduces your monitoring.

People Served	Standard Sites	Reduced Sites
More than 100,000	100	50
10,001 to 100,000	60	30
3,301 to 10,000	40	20
501 to 3,300	20	10
101 to 500	10	5
Fewer than 101	5	5

Address: Enter the street number or other unique identifier (such as lot or unit number) of the sampling site and include the city if the water utility services multiple cities.

Tier, Category, and Structure Type: Enter the appropriate codes from the table below in the Tier, Category, and Structure Type columns to identify the selection criteria for each site.

Tier	Category	Structure Type	Description
Tier 1	A	SFR	Single Family Residence (SFR) with lead service line
	B	SFR	SFR with interior lead plumbing
	C	MFR	Multi-family Residence (MFR) if MFRs comprise at least 20% of total service connections
Tier 2	D	MFR or BLDG	MFR or other building (BLDG) with lead service line
	E	MFR or BLDG	MFR or other BLDG with interior lead plumbing
Tier 3	F	SFR	SFR with copper plumbing with lead solder installed before 1988
Other	OT	SFR, MFR, Or BLDG	If no Tier 1, 2, 3 sites, use sites representative of plumbing commonly found throughout the supply

Service Line and Interior Plumbing Material: Enter the appropriate codes from the table below in the Service Line Material and Interior Plumbing Material columns.

Material		
L	=	Lead
CLS	=	Copper with lead solder installed before July 1988
C	=	Copper installed after July 1988
G	=	Galvanized
P	=	Plastic

Site Validation Method: Enter method used to verify site information (permit records, visual inspection, etc.).

NOTE: It is **highly recommended** that the plan contains more sites than are required for standard monitoring. For example, if the standard number of required sampling sites is 10, list 5 or more additional, appropriately tiered sites that may be used as an alternate if an original site is unavailable.

SAMPLING PLAN – LEAD AND COPPER

Issued under authority of the Michigan Safe Drinking Water Act, 1976 PA 399, and Administrative Rules, as amended. Administrative Rule R 325.10710a requires a water supply to monitor for lead and copper according to a pool of targeted sampling sites in accordance with designated site selection criteria. Complete and submit this form to MDEQ.

Michigan Lead and Copper Rule
Lead and Copper Tap Sample Site Selection Criteria

Community water supplies must identify a pool of lead and copper sampling sites containing **AT LEAST** the number of sites necessary to conduct **STANDARD** monitoring (see instructions for number of required sites). It is highly recommended that the sampling pool contain more sites than required in case routine sites are unavailable at time of sampling. The sampling pool must target high risk sites using the criteria below.

- **Samples must be collected from Tier 1 sites, unless ...**
- insufficient Tier 1 sampling sites are available, then **Tier 2** sites must be used, unless ...
- insufficient Tier 1 and Tier 2 sampling sites are available, then **Tier 3** sites must be used.
- If no Tier 1, 2, or 3 sites are available, sampling sites must be representative of plumbing materials typically found throughout the water system.

TIER 1 SITES - Single family residences with either: o Lead service lines (LSL)* o Interior lead plumbing Multiple family residences (MFR) with LSLs or interior lead plumbing may be used as Tier 1 sites when MFR comprise at least 20 percent of the total service connections.
TIER 2 SITES – Other buildings or multiple family residences with either: o Lead service lines* o Interior lead plumbing
TIER 3 SITES - Single family residences with: o Copper plumbing with lead solder installed before July 1988
OTHER SITES o Sites representative of plumbing materials commonly found throughout the water supply.
*** Priority should be placed on sites with full LSLs, followed by partial LSLs, followed by lead goosenecks or pigtails.**

Also Note:

- Each round of sampling should be conducted at the **SAME** sampling sites unless ...
  - a site no longer meets tiering criteria (for example, a site is no longer Tier 1 after having the lead service line replaced); or
  - a site is unavailable (for example, a site has no water service, resident refuses to participate, etc.)
- **DO NOT** sample from outside hose spigots or utility sinks.
  - For residential sites, samples **MUST BE** collected from kitchen or bathroom taps typically used for consumption. For non-residential sites, samples **MUST BE** collected from taps typically used for consumption.
- Samples **MAY NOT** be taken from taps that have point of use or point of entry treatment devices designed to remove inorganic contaminants, such as an iron removal filter, reverse osmosis system, or water softener.

Lead and Copper Sampling Pool Form Instructions

Water Supply Name, WSSN, and County: Enter your water supply information.

Standard Number of Sites Required: Enter the standard number of sites you are required to sample based on your population.

Reduced Number of Sites Required: Enter the number of sites you would be required to sample if the MDEQ reduces your monitoring.

People Served	Standard Sites	Reduced Sites
More than 100,000	100	50
10,001 to 100,000	60	30
3,301 to 10,000	40	20
501 to 3,300	20	10
101 to 500	10	5
Fewer than 101	5	5

Address: Enter the street number or other unique identifier (such as lot or unit number) of the sampling site and include the city if the water utility services multiple cities.

Tier, Category, and Structure Type: Enter the appropriate codes from the table below in the Tier, Category, and Structure Type columns to identify the selection criteria for each site.

Tier	Category	Structure Type	Description
Tier 1	A	SFR	Single Family Residence (SFR) with lead service line
	B	SFR	SFR with interior lead plumbing
	C	MFR	Multi-family Residence (MFR) if MFRs comprise at least 20% of total service connections
Tier 2	D	MFR or BLDG	MFR or other building (BLDG) with lead service line
	E	MFR or BLDG	MFR or other BLDG with interior lead plumbing
Tier 3	F	SFR	SFR with copper plumbing with lead solder installed before 1988
Other	OT	SFR, MFR, Or BLDG	If no Tier 1, 2, 3 sites, use sites representative of plumbing commonly found throughout the supply

Service Line and Interior Plumbing Material: Enter the appropriate codes from the table below in the Service Line Material and Interior Plumbing Material columns.

Material		
L	=	Lead
CLS	=	Copper with lead solder installed before July 1988
C	=	Copper installed after July 1988
G	=	Galvanized
P	=	Plastic

Site Validation Method: Enter method used to verify site information (permit records, visual inspection, etc.).

NOTE: It is **highly recommended** that the plan contains more sites than are required for standard monitoring. For example, if the standard number of required sampling sites is 10, list 5 or more additional, appropriately tiered sites that may be used as an alternate if an original site is unavailable.

22	320 Pin Oak	3	H	SFR	C	C	Visual

Use additional pages for water supplies requiring more sampling sites.

Michigan Lead and Copper Rule
Lead and Copper Tap Sample Site Selection Criteria

Community water supplies must identify a pool of lead and copper sampling sites containing **AT LEAST** the number of sites necessary to conduct **STANDARD** monitoring (see instructions for number of required sites). It is highly recommended that the sampling pool contain more sites than required in case routine sites are unavailable at time of sampling. The sampling pool must target high risk sites using the criteria below.

- **Samples must be collected from Tier 1 sites, unless ...**
- insufficient Tier 1 sampling sites are available, then **Tier 2** sites must be used, unless ...
- insufficient Tier 1 and Tier 2 sampling sites are available, then **Tier 3** sites must be used.
- If no Tier 1, 2, or 3 sites are available, sampling sites must be representative of plumbing materials typically found throughout the water system.

TIER 1 SITES - Single family residences with either: o Lead service lines (LSL)* o Interior lead plumbing Multiple family residences (MFR) with LSLs or interior lead plumbing may be used as Tier 1 sites when MFR comprise at least 20 percent of the total service connections.
TIER 2 SITES – Other buildings or multiple family residences with either: o Lead service lines* o Interior lead plumbing
TIER 3 SITES - Single family residences with: o Copper plumbing with lead solder installed before July 1988
OTHER SITES o Sites representative of plumbing materials commonly found throughout the water supply.
*** Priority should be placed on sites with full LSLs, followed by partial LSLs, followed by lead goosenecks or pigtails.**

Also Note:

- Each round of sampling should be conducted at the **SAME** sampling sites unless ...
  - a site no longer meets tiering criteria (for example, a site is no longer Tier 1 after having the lead service line replaced); or
  - a site is unavailable (for example, a site has no water service, resident refuses to participate, etc.)
- **DO NOT** sample from outside hose spigots or utility sinks.
  - For residential sites, samples **MUST BE** collected from kitchen or bathroom taps typically used for consumption. For non-residential sites, samples **MUST BE** collected from taps typically used for consumption.
- Samples **MAY NOT** be taken from taps that have point of use or point of entry treatment devices designed to remove inorganic contaminants, such as an iron removal filter, reverse osmosis system, or water softener.

Lead and Copper Sampling Pool Form Instructions

Water Supply Name, WSSN, and County: Enter your water supply information.

Standard Number of Sites Required: Enter the standard number of sites you are required to sample based on your population.

Reduced Number of Sites Required: Enter the number of sites you would be required to sample if the MDEQ reduces your monitoring.

People Served	Standard Sites	Reduced Sites
More than 100,000	100	50
10,001 to 100,000	60	30
3,301 to 10,000	40	20
501 to 3,300	20	10
101 to 500	10	5
Fewer than 101	5	5

Address: Enter the street number or other unique identifier (such as lot or unit number) of the sampling site and include the city if the water utility services multiple cities.

Tier, Category, and Structure Type: Enter the appropriate codes from the table below in the Tier, Category, and Structure Type columns to identify the selection criteria for each site.

Tier	Category	Structure Type	Description
Tier 1	A	SFR	Single Family Residence (SFR) with lead service line
	B	SFR	SFR with interior lead plumbing
	C	MFR	Multi-family Residence (MFR) if MFRs comprise at least 20% of total service connections
Tier 2	D	MFR or BLDG	MFR or other building (BLDG) with lead service line
	E	MFR or BLDG	MFR or other BLDG with interior lead plumbing
Tier 3	F	SFR	SFR with copper plumbing with lead solder installed before 1988
Other	OT	SFR, MFR, Or BLDG	If no Tier 1, 2, 3 sites, use sites representative of plumbing commonly found throughout the supply

Service Line and Interior Plumbing Material: Enter the appropriate codes from the table below in the Service Line Material and Interior Plumbing Material columns.

Material		
L	=	Lead
CLS	=	Copper with lead solder installed before July 1988
C	=	Copper installed after July 1988
G	=	Galvanized
P	=	Plastic

Site Validation Method: Enter method used to verify site information (permit records, visual inspection, etc.).

NOTE: It is **highly recommended** that the plan contains more sites than are required for standard monitoring. For example, if the standard number of required sampling sites is 10, list 5 or more additional, appropriately tiered sites that may be used as an alternate if an original site is unavailable.

SAMPLING PLAN – LEAD AND COPPER

Issued under authority of the Michigan Safe Drinking Water Act, 1976 PA 399, and Administrative Rules, as amended. Administrative Rule R 325.10710a requires a water supply to monitor for lead and copper according to a pool of targeted sampling sites in accordance with designated site selection criteria. Complete and submit this form to MDEQ.

Michigan Lead and Copper Rule
Lead and Copper Tap Sample Site Selection Criteria

Community water supplies must identify a pool of lead and copper sampling sites containing **AT LEAST** the number of sites necessary to conduct **STANDARD** monitoring (see instructions for number of required sites). It is highly recommended that the sampling pool contain more sites than required in case routine sites are unavailable at time of sampling. The sampling pool must target high risk sites using the criteria below.

- **Samples must be collected from Tier 1 sites, unless ...**
- insufficient Tier 1 sampling sites are available, then **Tier 2** sites must be used, unless ...
- insufficient Tier 1 and Tier 2 sampling sites are available, then **Tier 3** sites must be used.
- If no Tier 1, 2, or 3 sites are available, sampling sites must be representative of plumbing materials typically found throughout the water system.

TIER 1 SITES - Single family residences with either: ○ Lead service lines (LSL)* ○ Interior lead plumbing Multiple family residences (MFR) with LSLs or interior lead plumbing may be used as Tier 1 sites when MFR comprise at least 20 percent of the total service connections.
TIER 2 SITES – Other buildings or multiple family residences with either: ○ Lead service lines* ○ Interior lead plumbing
TIER 3 SITES - Single family residences with: ○ Copper plumbing with lead solder installed before July 1988
OTHER SITES ○ Sites representative of plumbing materials commonly found throughout the water supply.
*** Priority should be placed on sites with full LSLs, followed by partial LSLs, followed by lead goosenecks or pigtails.**

Also Note:

- Each round of sampling should be conducted at the **SAME** sampling sites unless ...
  - a site no longer meets tiering criteria (for example, a site is no longer Tier 1 after having the lead service line replaced); or
  - a site is unavailable (for example, a site has no water service, resident refuses to participate, etc.)
- **DO NOT** sample from outside hose spigots or utility sinks.
  - For residential sites, samples **MUST BE** collected from kitchen or bathroom taps typically used for consumption. For non-residential sites, samples **MUST BE** collected from taps typically used for consumption.
- Samples **MAY NOT** be taken from taps that have point of use or point of entry treatment devices designed to remove inorganic contaminants, such as an iron removal filter, reverse osmosis system, or water softener.

Lead and Copper Sampling Pool Form Instructions

Water Supply Name, WSSN, and County: Enter your water supply information.

Standard Number of Sites Required: Enter the standard number of sites you are required to sample based on your population.

Reduced Number of Sites Required: Enter the number of sites you would be required to sample if the MDEQ reduces your monitoring.

People Served	Standard Sites	Reduced Sites
More than 100,000	100	50
10,001 to 100,000	60	30
3,301 to 10,000	40	20
501 to 3,300	20	10
101 to 500	10	5
Fewer than 101	5	5

Address: Enter the street number or other unique identifier (such as lot or unit number) of the sampling site and include the city if the water utility services multiple cities.

Tier, Category, and Structure Type: Enter the appropriate codes from the table below in the Tier, Category, and Structure Type columns to identify the selection criteria for each site.

Tier	Category	Structure Type	Description
Tier 1	A	SFR	Single Family Residence (SFR) with lead service line
	B	SFR	SFR with interior lead plumbing
	C	MFR	Multi-family Residence (MFR) if MFRs comprise at least 20% of total service connections
Tier 2	D	MFR or BLDG	MFR or other building (BLDG) with lead service line
	E	MFR or BLDG	MFR or other BLDG with interior lead plumbing
Tier 3	F	SFR	SFR with copper plumbing with lead solder installed before 1988
Other	OT	SFR, MFR, Or BLDG	If no Tier 1, 2, 3 sites, use sites representative of plumbing commonly found throughout the supply

Service Line and Interior Plumbing Material: Enter the appropriate codes from the table below in the Service Line Material and Interior Plumbing Material columns.

Material		
L	=	Lead
CLS	=	Copper with lead solder installed before July 1988
C	=	Copper installed after July 1988
G	=	Galvanized
P	=	Plastic

Site Validation Method: Enter method used to verify site information (permit records, visual inspection, etc.).

NOTE: It is **highly recommended** that the plan contains more sites than are required for standard monitoring. For example, if the standard number of required sampling sites is 10, list 5 or more additional, appropriately tiered sites that may be used as an alternate if an original site is unavailable.

Michigan Lead and Copper Rule
Lead and Copper Tap Sample Site Selection Criteria

Community water supplies must identify a pool of lead and copper sampling sites containing **AT LEAST** the number of sites necessary to conduct **STANDARD** monitoring (see instructions for number of required sites). It is highly recommended that the sampling pool contain more sites than required in case routine sites are unavailable at time of sampling. The sampling pool must target high risk sites using the criteria below.

- **Samples must be collected from Tier 1 sites, unless …**
- insufficient Tier 1 sampling sites are available, then **Tier 2** sites must be used, unless …
- insufficient Tier 1 and Tier 2 sampling sites are available, then **Tier 3** sites must be used.
- If no Tier 1, 2, or 3 sites are available, sampling sites must be representative of plumbing materials typically found throughout the water system.

TIER 1 SITES - Single family residences with either: o Lead service lines (LSL)***** o Interior lead plumbing Multiple family residences (MFR) with LSLs or interior lead plumbing may be used as Tier 1 sites when MFR comprise at least 20 percent of the total service connections.
TIER 2 SITES – Other buildings or multiple family residences with either: o Lead service lines***** o Interior lead plumbing
TIER 3 SITES - Single family residences with: o Copper plumbing with lead solder installed before July 1988
OTHER SITES o Sites representative of plumbing materials commonly found throughout the water supply.
*** Priority should be placed on sites with full LSLs, followed by partial LSLs, followed by lead goosenecks or pigtails.**

Also Note:

- Each round of sampling should be conducted at the **SAME** sampling sites unless …
  - a site no longer meets tiering criteria (for example, a site is no longer Tier 1 after having the lead service line replaced); or
  - a site is unavailable (for example, a site has no water service, resident refuses to participate, etc.)
- **DO NOT** sample from outside hose spigots or utility sinks.
  - For residential sites, samples **MUST BE** collected from kitchen or bathroom taps typically used for consumption. For non-residential sites, samples **MUST BE** collected from taps typically used for consumption.
- Samples **MAY NOT** be taken from taps that have point of use or point of entry treatment devices designed to remove inorganic contaminants, such as an iron removal filter, reverse osmosis system, or water softener.

Lead and Copper Sampling Pool Form Instructions

Water Supply Name, WSSN, and County: Enter your water supply information.

Standard Number of Sites Required: Enter the standard number of sites you are required to sample based on your population.

Reduced Number of Sites Required: Enter the number of sites you would be required to sample if the MDEQ reduces your monitoring.

People Served	Standard Sites	Reduced Sites
More than 100,000	100	50
10,001 to 100,000	60	30
3,301 to 10,000	40	20
501 to 3,300	20	10
101 to 500	10	5
Fewer than 101	5	5

Address: Enter the street number or other unique identifier (such as lot or unit number) of the sampling site and include the city if the water utility services multiple cities.

Tier, Category, and Structure Type: Enter the appropriate codes from the table below in the Tier, Category, and Structure Type columns to identify the selection criteria for each site.

Tier	Category	Structure Type	Description
Tier 1	A	SFR	Single Family Residence (SFR) with lead service line
	B	SFR	SFR with interior lead plumbing
	C	MFR	Multi-family Residence (MFR) if MFRs comprise at least 20% of total service connections
Tier 2	D	MFR or BLDG	MFR or other building (BLDG) with lead service line
	E	MFR or BLDG	MFR or other BLDG with interior lead plumbing
Tier 3	F	SFR	SFR with copper plumbing with lead solder installed before 1988
Other	OT	SFR, MFR, Or BLDG	If no Tier 1, 2, 3 sites, use sites representative of plumbing commonly found throughout the supply

Service Line and Interior Plumbing Material: Enter the appropriate codes from the table below in the Service Line Material and Interior Plumbing Material columns.

Material		
L	=	Lead
CLS	=	Copper with lead solder installed before July 1988
C	=	Copper installed after July 1988
G	=	Galvanized
P	=	Plastic

Site Validation Method: Enter method used to verify site information (permit records, visual inspection, etc.).

NOTE: It is **highly recommended** that the plan contains more sites than are required for standard monitoring. For example, if the standard number of required sampling sites is 10, list 5 or more additional, appropriately tiered sites that may be used as an alternate if an original site is unavailable.

MICHIGAN DEPARTMENT OF ENVIRONMENTAL QUALITY
DRINKING WATER AND MUNICIPAL ASSISTANCE DIVISION

SAMPLING PLAN – LEAD AND COPPER

Issued under authority of the Michigan Safe Drinking Water Act, 1976 PA 399, and Administrative Rules, as amended. Administrative Rule R 325.10710a requires a water supply to monitor for lead and copper according to a pool of targeted sampling sites in accordance with designated site selection criteria. Complete and submit this form to MDEQ.

Michigan Lead and Copper Rule
Lead and Copper Tap Sample Site Selection Criteria

Community water supplies must identify a pool of lead and copper sampling sites containing **AT LEAST** the number of sites necessary to conduct **STANDARD** monitoring (see instructions for number of required sites). It is highly recommended that the sampling pool contain more sites than required in case routine sites are unavailable at time of sampling. The sampling pool must target high risk sites using the criteria below.

- **Samples must be collected from Tier 1 sites, unless ...**
- insufficient Tier 1 sampling sites are available, then **Tier 2** sites must be used, unless ...
- insufficient Tier 1 and Tier 2 sampling sites are available, then **Tier 3** sites must be used.
- If no Tier 1, 2, or 3 sites are available, sampling sites must be representative of plumbing materials typically found throughout the water system.

TIER 1 SITES - Single family residences with either: o Lead service lines (LSL)* o Interior lead plumbing Multiple family residences (MFR) with LSLs or interior lead plumbing may be used as Tier 1 sites when MFR comprise at least 20 percent of the total service connections.
TIER 2 SITES – Other buildings or multiple family residences with either: o Lead service lines* o Interior lead plumbing
TIER 3 SITES - Single family residences with: o Copper plumbing with lead solder installed before July 1988
OTHER SITES o Sites representative of plumbing materials commonly found throughout the water supply.
*** Priority should be placed on sites with full LSLs, followed by partial LSLs, followed by lead goosenecks or pigtails.**

Also Note:

- Each round of sampling should be conducted at the **SAME** sampling sites unless ...
  - a site no longer meets tiering criteria (for example, a site is no longer Tier 1 after having the lead service line replaced); or
  - a site is unavailable (for example, a site has no water service, resident refuses to participate, etc.)
- **DO NOT** sample from outside hose spigots or utility sinks.
  - For residential sites, samples **MUST BE** collected from kitchen or bathroom taps typically used for consumption. For non-residential sites, samples **MUST BE** collected from taps typically used for consumption.
- Samples **MAY NOT** be taken from taps that have point of use or point of entry treatment devices designed to remove inorganic contaminants, such as an iron removal filter, reverse osmosis system, or water softener.

Lead and Copper Sampling Pool Form Instructions

Water Supply Name, WSSN, and County: Enter your water supply information.

Standard Number of Sites Required: Enter the standard number of sites you are required to sample based on your population.

Reduced Number of Sites Required: Enter the number of sites you would be required to sample if the MDEQ reduces your monitoring.

People Served	Standard Sites	Reduced Sites
More than 100,000	100	50
10,001 to 100,000	60	30
3,301 to 10,000	40	20
501 to 3,300	20	10
101 to 500	10	5
Fewer than 101	5	5

Address: Enter the street number or other unique identifier (such as lot or unit number) of the sampling site and include the city if the water utility services multiple cities.

Tier, Category, and Structure Type: Enter the appropriate codes from the table below in the Tier, Category, and Structure Type columns to identify the selection criteria for each site.

Tier	Category	Structure Type	Description
Tier 1	A	SFR	Single Family Residence (SFR) with lead service line
	B	SFR	SFR with interior lead plumbing
	C	MFR	Multi-family Residence (MFR) if MFRs comprise at least 20% of total service connections
Tier 2	D	MFR or BLDG	MFR or other building (BLDG) with lead service line
	E	MFR or BLDG	MFR or other BLDG with interior lead plumbing
Tier 3	F	SFR	SFR with copper plumbing with lead solder installed before 1988
Other	OT	SFR, MFR, Or BLDG	If no Tier 1, 2, 3 sites, use sites representative of plumbing commonly found throughout the supply

Service Line and Interior Plumbing Material: Enter the appropriate codes from the table below in the Service Line Material and Interior Plumbing Material columns.

Material		
L	=	Lead
CLS	=	Copper with lead solder installed before July 1988
C	=	Copper installed after July 1988
G	=	Galvanized
P	=	Plastic

Site Validation Method: Enter method used to verify site information (permit records, visual inspection, etc.).

NOTE: It is **highly recommended** that the plan contains more sites than are required for standard monitoring. For example, if the standard number of required sampling sites is 10, list 5 or more additional, appropriately tiered sites that may be used as an alternate if an original site is unavailable.

MICHIGAN DEPARTMENT OF ENVIRONMENTAL QUALITY
DRINKING WATER AND MUNICIPAL ASSISTANCE DIVISION

SAMPLING PLAN – LEAD AND COPPER

Issued under authority of the Michigan Safe Drinking Water Act, 1976 PA 399, and Administrative Rules, as amended. Administrative Rule R 325.10710a requires a water supply to monitor for lead and copper according to a pool of targeted sampling sites in accordance with designated site selection criteria. Complete and submit this form to MDEQ.

Michigan Lead and Copper Rule
Lead and Copper Tap Sample Site Selection Criteria

Community water supplies must identify a pool of lead and copper sampling sites containing **AT LEAST** the number of sites necessary to conduct **STANDARD** monitoring (see instructions for number of required sites). It is highly recommended that the sampling pool contain more sites than required in case routine sites are unavailable at time of sampling. The sampling pool must target high risk sites using the criteria below.

- **Samples must be collected from Tier 1 sites, unless …**
- insufficient Tier 1 sampling sites are available, then **Tier 2** sites must be used, unless …
- insufficient Tier 1 and Tier 2 sampling sites are available, then **Tier 3** sites must be used.
- If no Tier 1, 2, or 3 sites are available, sampling sites must be representative of plumbing materials typically found throughout the water system.

TIER 1 SITES - Single family residences with either: o Lead service lines (LSL)***** o Interior lead plumbing Multiple family residences (MFR) with LSLs or interior lead plumbing may be used as Tier 1 sites when MFR comprise at least 20 percent of the total service connections.
TIER 2 SITES – Other buildings or multiple family residences with either: o Lead service lines***** o Interior lead plumbing
TIER 3 SITES - Single family residences with: o Copper plumbing with lead solder installed before July 1988
OTHER SITES o Sites representative of plumbing materials commonly found throughout the water supply.
*** Priority should be placed on sites with full LSLs, followed by partial LSLs, followed by lead goosenecks or pigtails.**

Also Note:

- Each round of sampling should be conducted at the **SAME** sampling sites unless …
  - a site no longer meets tiering criteria (for example, a site is no longer Tier 1 after having the lead service line replaced); or
  - a site is unavailable (for example, a site has no water service, resident refuses to participate, etc.)
- **DO NOT** sample from outside hose spigots or utility sinks.
  - For residential sites, samples **MUST BE** collected from kitchen or bathroom taps typically used for consumption. For non-residential sites, samples **MUST BE** collected from taps typically used for consumption.
- Samples **MAY NOT** be taken from taps that have point of use or point of entry treatment devices designed to remove inorganic contaminants, such as an iron removal filter, reverse osmosis

system, or water softener.

Lead and Copper Sampling Pool Form Instructions

Water Supply Name, WSSN, and County: Enter your water supply information.

Standard Number of Sites Required: Enter the standard number of sites you are required to sample based on your population.

Reduced Number of Sites Required: Enter the number of sites you would be required to sample if the MDEQ reduces your monitoring.

People Served	Standard Sites	Reduced Sites
More than 100,000	100	50
10,001 to 100,000	60	30
3,301 to 10,000	40	20
501 to 3,300	20	10
101 to 500	10	5
Fewer than 101	5	5

Address: Enter the street number or other unique identifier (such as lot or unit number) of the sampling site and include the city if the water utility services multiple cities.

Tier, Category, and Structure Type: Enter the appropriate codes from the table below in the Tier, Category, and Structure Type columns to identify the selection criteria for each site.

Tier	Category	Structure Type	Description
Tier 1	A	SFR	Single Family Residence (SFR) with lead service line
	B	SFR	SFR with interior lead plumbing
	C	MFR	Multi-family Residence (MFR) if MFRs comprise at least 20% of total service connections
Tier 2	D	MFR or BLDG	MFR or other building (BLDG) with lead service line
	E	MFR or BLDG	MFR or other BLDG with interior lead plumbing
Tier 3	F	SFR	SFR with copper plumbing with lead solder installed before 1988
Other	OT	SFR, MFR, Or BLDG	If no Tier 1, 2, 3 sites, use sites representative of plumbing commonly found throughout the supply

Service Line and Interior Plumbing Material: Enter the appropriate codes from the table below in the Service Line Material and Interior Plumbing Material columns.

Material		
L	=	Lead
CLS	=	Copper with lead solder installed before July 1988
C	=	Copper installed after July 1988
G	=	Galvanized
P	=	Plastic

Site Validation Method: Enter method used to verify site information (permit records, visual inspection, etc.).

NOTE: It is **highly recommended** that the plan contains more sites than are required for standard monitoring. For example, if the standard number of required sampling sites is 10, list 5 or more additional, appropriately tiered sites that may be used as an alternate if an original site is unavailable.

MICHIGAN DEPARTMENT OF ENVIRONMENTAL QUALITY
DRINKING WATER AND MUNICIPAL ASSISTANCE DIVISION

SAMPLING PLAN – LEAD AND COPPER

Issued under authority of the Michigan Safe Drinking Water Act, 1976 PA 399, and Administrative Rules, as amended. Administrative Rule R 325.10710a requires a water supply to monitor for lead and copper according to a pool of targeted sampling sites in accordance with designated site selection criteria. Complete and submit this form to MDEQ.

Michigan Lead and Copper Rule
Lead and Copper Tap Sample Site Selection Criteria

Community water supplies must identify a pool of lead and copper sampling sites containing **AT LEAST** the number of sites necessary to conduct **STANDARD** monitoring (see instructions for number of required sites). It is highly recommended that the sampling pool contain more sites than required in case routine sites are unavailable at time of sampling. The sampling pool must target high risk sites using the criteria below.

- **Samples must be collected from Tier 1 sites, unless …**
- insufficient Tier 1 sampling sites are available, then **Tier 2** sites must be used, unless …
- insufficient Tier 1 and Tier 2 sampling sites are available, then **Tier 3** sites must be used.
- If no Tier 1, 2, or 3 sites are available, sampling sites must be representative of plumbing materials typically found throughout the water system.

TIER 1 SITES - Single family residences with either: o Lead service lines (LSL)* o Interior lead plumbing Multiple family residences (MFR) with LSLs or interior lead plumbing may be used as Tier 1 sites when MFR comprise at least 20 percent of the total service connections.
TIER 2 SITES – Other buildings or multiple family residences with either: o Lead service lines* o Interior lead plumbing
TIER 3 SITES - Single family residences with: o Copper plumbing with lead solder installed before July 1988
OTHER SITES o Sites representative of plumbing materials commonly found throughout the water supply.
*** Priority should be placed on sites with full LSLs, followed by partial LSLs, followed by lead goosenecks or pigtails.**

Also Note:

- Each round of sampling should be conducted at the **SAME** sampling sites unless …
  - a site no longer meets tiering criteria (for example, a site is no longer Tier 1 after having the lead service line replaced); or
  - a site is unavailable (for example, a site has no water service, resident refuses to participate, etc.)
- **DO NOT** sample from outside hose spigots or utility sinks.
  - For residential sites, samples **MUST BE** collected from kitchen or bathroom taps typically used for consumption. For non-residential sites, samples **MUST BE** collected from taps typically used for consumption.
- Samples **MAY NOT** be taken from taps that have point of use or point of entry treatment devices designed to remove inorganic contaminants, such as an iron removal filter, reverse osmosis system, or water softener.

Lead and Copper Sampling Pool Form Instructions

Water Supply Name, WSSN, and County: Enter your water supply information.

Standard Number of Sites Required: Enter the standard number of sites you are required to sample based on your population.

Reduced Number of Sites Required: Enter the number of sites you would be required to sample if the MDEQ reduces your monitoring.

People Served	Standard Sites	Reduced Sites
More than 100,000	100	50
10,001 to 100,000	60	30
3,301 to 10,000	40	20
501 to 3,300	20	10
101 to 500	10	5
Fewer than 101	5	5

Address: Enter the street number or other unique identifier (such as lot or unit number) of the sampling site and include the city if the water utility services multiple cities.

Tier, Category, and Structure Type: Enter the appropriate codes from the table below in the Tier, Category, and Structure Type columns to identify the selection criteria for each site.

Tier	Category	Structure Type	Description
Tier 1	A	SFR	Single Family Residence (SFR) with lead service line
	B	SFR	SFR with interior lead plumbing
	C	MFR	Multi-family Residence (MFR) if MFRs comprise at least 20% of total service connections
Tier 2	D	MFR or BLDG	MFR or other building (BLDG) with lead service line
	E	MFR or BLDG	MFR or other BLDG with interior lead plumbing
Tier 3	F	SFR	SFR with copper plumbing with lead solder installed before 1988
Other	OT	SFR, MFR, Or BLDG	If no Tier 1, 2, 3 sites, use sites representative of plumbing commonly found throughout the supply

Service Line and Interior Plumbing Material: Enter the appropriate codes from the table below in the Service Line Material and Interior Plumbing Material columns.

Material		
L	=	Lead
CLS	=	Copper with lead solder installed before July 1988
C	=	Copper installed after July 1988
G	=	Galvanized
P	=	Plastic

Site Validation Method: Enter method used to verify site information (permit records, visual inspection, etc.).

NOTE: It is **highly recommended** that the plan contains more sites than are required for standard monitoring. For example, if the standard number of required sampling sites is 10, list 5 or more additional, appropriately tiered sites that may be used as an alternate if an original site is unavailable.

Michigan Lead and Copper Rule
Lead and Copper Tap Sample Site Selection Criteria

Community water supplies must identify a pool of lead and copper sampling sites containing **AT LEAST** the number of sites necessary to conduct **STANDARD** monitoring (see instructions for number of required sites). It is highly recommended that the sampling pool contain more sites than required in case routine sites are unavailable at time of sampling. The sampling pool must target high risk sites using the criteria below.

- **Samples must be collected from Tier 1 sites, unless …**
- insufficient Tier 1 sampling sites are available, then **Tier 2** sites must be used, unless …
- insufficient Tier 1 and Tier 2 sampling sites are available, then **Tier 3** sites must be used.
- If no Tier 1, 2, or 3 sites are available, sampling sites must be representative of plumbing materials typically found throughout the water system.

TIER 1 SITES - Single family residences with either: ○ Lead service lines (LSL)* ○ Interior lead plumbing Multiple family residences (MFR) with LSLs or interior lead plumbing may be used as Tier 1 sites when MFR comprise at least 20 percent of the total service connections.
TIER 2 SITES – Other buildings or multiple family residences with either: ○ Lead service lines* ○ Interior lead plumbing
TIER 3 SITES - Single family residences with: ○ Copper plumbing with lead solder installed before July 1988
OTHER SITES ○ Sites representative of plumbing materials commonly found throughout the water supply.
*** Priority should be placed on sites with full LSLs, followed by partial LSLs, followed by lead goosenecks or pigtails.**

Also Note:

- Each round of sampling should be conducted at the **SAME** sampling sites unless …
  - a site no longer meets tiering criteria (for example, a site is no longer Tier 1 after having the lead service line replaced); or
  - a site is unavailable (for example, a site has no water service, resident refuses to participate, etc.)
- **DO NOT** sample from outside hose spigots or utility sinks.
  - For residential sites, samples **MUST BE** collected from kitchen or bathroom taps typically used for consumption. For non-residential sites, samples **MUST BE** collected from taps typically used for consumption.
- Samples **MAY NOT** be taken from taps that have point of use or point of entry treatment devices designed to remove inorganic contaminants, such as an iron removal filter, reverse osmosis

system, or water softener.

Lead and Copper Sampling Pool Form Instructions

Water Supply Name, WSSN, and County: Enter your water supply information.

Standard Number of Sites Required: Enter the standard number of sites you are required to sample based on your population.

Reduced Number of Sites Required: Enter the number of sites you would be required to sample if the MDEQ reduces your monitoring.

People Served	Standard Sites	Reduced Sites
More than 100,000	100	50
10,001 to 100,000	60	30
3,301 to 10,000	40	20
501 to 3,300	20	10
101 to 500	10	5
Fewer than 101	5	5

Address: Enter the street number or other unique identifier (such as lot or unit number) of the sampling site and include the city if the water utility services multiple cities.

Tier, Category, and Structure Type: Enter the appropriate codes from the table below in the Tier, Category, and Structure Type columns to identify the selection criteria for each site.

Tier	Category	Structure Type	Description
Tier 1	A	SFR	Single Family Residence (SFR) with lead service line
	B	SFR	SFR with interior lead plumbing
	C	MFR	Multi-family Residence (MFR) if MFRs comprise at least 20% of total service connections
Tier 2	D	MFR or BLDG	MFR or other building (BLDG) with lead service line
	E	MFR or BLDG	MFR or other BLDG with interior lead plumbing
Tier 3	F	SFR	SFR with copper plumbing with lead solder installed before 1988
Other	OT	SFR, MFR, Or BLDG	If no Tier 1, 2, 3 sites, use sites representative of plumbing commonly found throughout the supply

Service Line and Interior Plumbing Material: Enter the appropriate codes from the table below in the Service Line Material and Interior Plumbing Material columns.

Material		
L	=	Lead
CLS	=	Copper with lead solder installed before July 1988
C	=	Copper installed after July 1988
G	=	Galvanized
P	=	Plastic

RECEIVED

Michigan Lead and Copper Rule
Lead and Copper Tap Sample Site Selection Criteria

Community water supplies must identify a pool of lead and copper sampling sites containing **AT LEAST** the number of sites necessary to conduct **STANDARD** monitoring (see instructions for number of required sites). It is highly recommended that the sampling pool contain more sites than required in case routine sites are unavailable at time of sampling. The sampling pool must target high risk sites using the criteria below.

- **Samples must be collected from Tier 1 sites, unless …**
- insufficient Tier 1 sampling sites are available, then **Tier 2** sites must be used, unless …
- insufficient Tier 1 and Tier 2 sampling sites are available, then **Tier 3** sites must be used.
- If no Tier 1, 2, or 3 sites are available, sampling sites must be representative of plumbing materials typically found throughout the water system.

TIER 1 SITES - Single family residences with either: o Lead service lines (LSL)***** o Interior lead plumbing Multiple family residences (MFR) with LSLs or interior lead plumbing may be used as Tier 1 sites when MFR comprise at least 20 percent of the total service connections.
TIER 2 SITES – Other buildings or multiple family residences with either: o Lead service lines***** o Interior lead plumbing
TIER 3 SITES - Single family residences with: o Copper plumbing with lead solder installed before July 1988
OTHER SITES o Sites representative of plumbing materials commonly found throughout the water supply.
*** Priority should be placed on sites with full LSLs, followed by partial LSLs, followed by lead goosenecks or pigtails.**

Also Note:

- Each round of sampling should be conducted at the **SAME** sampling sites unless …
  - a site no longer meets tiering criteria (for example, a site is no longer Tier 1 after having the lead service line replaced); or
  - a site is unavailable (for example, a site has no water service, resident refuses to participate, etc.)
- **DO NOT** sample from outside hose spigots or utility sinks.
  - For residential sites, samples **MUST BE** collected from kitchen or bathroom taps typically used for consumption. For non-residential sites, samples **MUST BE** collected from taps typically used for consumption.
- Samples **MAY NOT** be taken from taps that have point of use or point of entry treatment devices designed to remove inorganic contaminants, such as an iron removal filter, reverse osmosis system, or water softener.

Lead and Copper Sampling Pool Form Instructions

Water Supply Name, WSSN, and County: Enter your water supply information.

Standard Number of Sites Required: Enter the standard number of sites you are required to sample based on your population.

Reduced Number of Sites Required: Enter the number of sites you would be required to sample if the MDEQ reduces your monitoring.

People Served	Standard Sites	Reduced Sites
More than 100,000	100	50
10,001 to 100,000	60	30
3,301 to 10,000	40	20
501 to 3,300	20	10
101 to 500	10	5
Fewer than 101	5	5

Address: Enter the street number or other unique identifier (such as lot or unit number) of the sampling site and include the city if the water utility services multiple cities.

Tier, Category, and Structure Type: Enter the appropriate codes from the table below in the Tier, Category, and Structure Type columns to identify the selection criteria for each site.

Tier	Category	Structure Type	Description
Tier 1	A	SFR	Single Family Residence (SFR) with lead service line
	B	SFR	SFR with interior lead plumbing
	C	MFR	Multi-family Residence (MFR) if MFRs comprise at least 20% of total service connections
Tier 2	D	MFR or BLDG	MFR or other building (BLDG) with lead service line
	E	MFR or BLDG	MFR or other BLDG with interior lead plumbing
Tier 3	F	SFR	SFR with copper plumbing with lead solder installed before 1988
Other	OT	SFR, MFR, Or BLDG	If no Tier 1, 2, 3 sites, use sites representative of plumbing commonly found throughout the supply

Service Line and Interior Plumbing Material: Enter the appropriate codes from the table below in the Service Line Material and Interior Plumbing Material columns.

Material		
L	=	Lead
CLS	=	Copper with lead solder installed before July 1988
C	=	Copper installed after July 1988
G	=	Galvanized
P	=	Plastic

Site Validation Method: Enter method used to verify site information (permit records, visual inspection, etc.).

NOTE: It is **highly recommended** that the plan contains more sites than are required for standard monitoring. For example, if the standard number of required sampling sites is 10, list 5 or more additional, appropriately tiered sites that may be used as an alternate if an original site is unavailable.

Lead and Copper Sampling Pool Plan (LCSP)

Under the Michigan Safe Drinking Water Act, 1976 PA 399, as amended, specifically R 325.10710a(1)(a)

"Lead and Copper Sampling Pool"

July 6, 2020
(CEI Project No. 190402)

Summary:

CEI performed an inventory on the Emmett Charter Townships water services. A total of 995 services were mapped, based off of tie cards and other information CEI received from the City of Battle Creek and Emmett Charter Township. The potential lead water services were identified and ranked according to their appropriate tier level classification. The estimated population of Emmett Township is 2550 people which requires a total of 20 standard sites to be sampled. The first sampling plan was submitted to EGLE on May 29, 2020.

Emmett Charter Township entered into a contract with Hunter Prell to excavate and verify the potential lead water services in the Township. This revised sampling plan updates the previous plan to include new information recently obtained in the field. A total of 20 sites are identified in this plan. All 20 sites were sampled in June of 2020. The water bottles have been delivered to the EGLE lab in Lansing, Michigan. We are currently waiting on the results from the last six sites. The first 14 sample results have been sent to the homeowners. Once the remaining six site results are received, they will be forwarded to the homeowners. We will also forward the necessary certification to EGLE at that time.

If you have any questions regarding this plan, please contact Rick Eshlaman P.E. at Civil Engineers, Inc. 14250 Beadle Lake Road, Suite 150, Battle Creek, MI 49014. Phone (269) 962-5127, Mobile (269) 207-7933, or Email reshlaman@cei-bc.com

Michigan Lead and Copper Rule
Lead and Copper Tap Sample Site Selection Criteria

Community water supplies must identify a pool of lead and copper sampling sites containing **AT LEAST** the number of sites necessary to conduct **STANDARD** monitoring (see instructions for number of required sites). It is highly recommended that the sampling pool contain more sites than required in case routine sites are unavailable at time of sampling. The sampling pool must target high risk sites using the criteria below.

- **Samples must be collected from Tier 1 sites, unless …**
- insufficient Tier 1 sampling sites are available, then **Tier 2** sites must be used, unless …
- insufficient Tier 1 and Tier 2 sampling sites are available, then **Tier 3** sites must be used.
- If no Tier 1, 2, or 3 sites are available, sampling sites must be representative of plumbing materials typically found throughout the water system.

TIER 1 SITES - Single family residences with either: o Lead service lines (LSL)* o Interior lead plumbing Multiple family residences (MFR) with LSLs or interior lead plumbing may be used as Tier 1 sites when MFR comprise at least 20 percent of the total service connections.
TIER 2 SITES – Other buildings or multiple family residences with either: o Lead service lines* o Interior lead plumbing
TIER 3 SITES - Single family residences with: o Copper plumbing with lead solder installed before July 1988
OTHER SITES o Sites representative of plumbing materials commonly found throughout the water supply.
*** Priority should be placed on sites with full LSLs, followed by partial LSLs, followed by lead goosenecks or pigtails.**

Also Note:

- Each round of sampling should be conducted at the **SAME** sampling sites unless …
  - a site no longer meets tiering criteria (for example, a site is no longer Tier 1 after having the lead service line replaced); or
  - a site is unavailable (for example, a site has no water service, resident refuses to participate, etc.)
- **DO NOT** sample from outside hose spigots or utility sinks.
  - For residential sites, samples **MUST BE** collected from kitchen or bathroom taps typically used for consumption. For non-residential sites, samples **MUST BE** collected from taps typically used for consumption.
- Samples **MAY NOT** be taken from taps that have point of use or point of entry treatment devices designed to remove inorganic contaminants, such as an iron removal filter, reverse osmosis system, or water softener.

Lead and Copper Sampling Pool Form Instructions

Water Supply Name, WSSN, and County: Enter your water supply information.

Standard Number of Sites Required: Enter the standard number of sites you are required to sample based on your population.

Reduced Number of Sites Required: Enter the number of sites you would be required to sample if the MDEQ reduces your monitoring.

People Served	Standard Sites	Reduced Sites
More than 100,000	100	50
10,001 to 100,000	60	30
3,301 to 10,000	40	20
501 to 3,300	20	10
101 to 500	10	5
Fewer than 101	5	5

Address: Enter the street number or other unique identifier (such as lot or unit number) of the sampling site and include the city if the water utility services multiple cities.

Tier, Category, and Structure Type: Enter the appropriate codes from the table below in the Tier, Category, and Structure Type columns to identify the selection criteria for each site.

Tier	Category	Structure Type	Description
Tier 1	A	SFR	Single Family Residence (SFR) with lead service line
	B	SFR	SFR with interior lead plumbing
	C	MFR	Multi-family Residence (MFR) if MFRs comprise at least 20% of total service connections
Tier 2	D	MFR or BLDG	MFR or other building (BLDG) with lead service line
	E	MFR or BLDG	MFR or other BLDG with interior lead plumbing
Tier 3	F	SFR	SFR with copper plumbing with lead solder installed before 1988
Other	OT	SFR, MFR, Or BLDG	If no Tier 1, 2, 3 sites, use sites representative of plumbing commonly found throughout the supply

Service Line and Interior Plumbing Material: Enter the appropriate codes from the table below in the Service Line Material and Interior Plumbing Material columns.

Material		
L	=	Lead
CLS	=	Copper with lead solder installed before July 1988
C	=	Copper installed after July 1988
G	=	Galvanized
P	=	Plastic

Site Validation Method: Enter method used to verify site information (permit records, visual inspection, etc.).

NOTE: It is **highly recommended** that the plan contains more sites than are required for standard monitoring. For example, if the standard number of required sampling sites is 10, list 5 or more additional, appropriately tiered sites that may be used as an alternate if an original site is unavailable.

MICHIGAN DEPARTMENT OF ENVIRONMENTAL QUALITY
DRINKING WATER AND MUNICIPAL ASSISTANCE DIVISION

SAMPLING PLAN – LEAD AND COPPER

Issued under authority of the Michigan Safe Drinking Water Act, 1976 PA 399, and Administrative Rules, as amended. Administrative Rule R 325.10710a requires a water supply to monitor for lead and copper according to a pool of targeted sampling sites in accordance with designated site selection criteria. Complete and submit this form to MDEQ.

MICHIGAN COMMUNITY WATER SUPPLY LEAD AND COPPER TAP SAMPLING POOL (cont.)

WSSN: _2430_____ Supply Name: City of Frankfort_____
Page ___1__ of __1___

Site No.	Address	Tier Level	Category	Structure Type	Service Line Material	Interior Plumbing Material	Site Validation Method

Use additional pages for water supplies requiring more sampling sites.

Michigan Lead and Copper Rule
Lead and Copper Tap Sample Site Selection Criteria

Community water supplies must identify a pool of lead and copper sampling sites containing **AT LEAST** the number of sites necessary to conduct **STANDARD** monitoring (see instructions for number of required sites). It is highly recommended that the sampling pool contain more sites than required in case routine sites are unavailable at time of sampling. The sampling pool must target high risk sites using the criteria below.

- **Samples must be collected from Tier 1 sites, unless …**
- insufficient Tier 1 sampling sites are available, then **Tier 2** sites must be used, unless …
- insufficient Tier 1 and Tier 2 sampling sites are available, then **Tier 3** sites must be used.
- If no Tier 1, 2, or 3 sites are available, sampling sites must be representative of plumbing materials typically found throughout the water system.

TIER 1 SITES - Single family residences with either: o Lead service lines (LSL)***** o Interior lead plumbing Multiple family residences (MFR) with LSLs or interior lead plumbing may be used as Tier 1 sites when MFR comprise at least 20 percent of the total service connections.
TIER 2 SITES – Other buildings or multiple family residences with either: o Lead service lines***** o Interior lead plumbing
TIER 3 SITES - Single family residences with: o Copper plumbing with lead solder installed before July 1988
OTHER SITES o Sites representative of plumbing materials commonly found throughout the water supply.
*** Priority should be placed on sites with full LSLs, followed by partial LSLs, followed by lead goosenecks or pigtails.**

Also Note:

- Each round of sampling should be conducted at the **SAME** sampling sites unless …
  - a site no longer meets tiering criteria (for example, a site is no longer Tier 1 after having the lead service line replaced); or
  - a site is unavailable (for example, a site has no water service, resident refuses to participate, etc.)
- **DO NOT** sample from outside hose spigots or utility sinks.
  - For residential sites, samples **MUST BE** collected from kitchen or bathroom taps typically used for consumption. For non-residential sites, samples **MUST BE** collected from taps typically used for consumption.
- Samples **MAY NOT** be taken from taps that have point of use or point of entry treatment devices designed to remove inorganic contaminants, such as an iron removal filter, reverse osmosis

system, or water softener.

Lead and Copper Sampling Pool Form Instructions

Water Supply Name, WSSN, and County: Enter your water supply information.

Standard Number of Sites Required: Enter the standard number of sites you are required to sample based on your population.

Reduced Number of Sites Required: Enter the number of sites you would be required to sample if the MDEQ reduces your monitoring.

People Served	Standard Sites	Reduced Sites
More than 100,000	100	50
10,001 to 100,000	60	30
3,301 to 10,000	40	20
501 to 3,300	20	10
101 to 500	10	5
Fewer than 101	5	5

Address: Enter the street number or other unique identifier (such as lot or unit number) of the sampling site and include the city if the water utility services multiple cities.

Tier, Category, and Structure Type: Enter the appropriate codes from the table below in the Tier, Category, and Structure Type columns to identify the selection criteria for each site.

Tier	Category	Structure Type	Description
Tier 1	A	SFR	Single Family Residence (SFR) with lead service line
	B	SFR	SFR with interior lead plumbing
	C	MFR	Multi-family Residence (MFR) if MFRs comprise at least 20% of total service connections
Tier 2	D	MFR or BLDG	MFR or other building (BLDG) with lead service line
	E	MFR or BLDG	MFR or other BLDG with interior lead plumbing
Tier 3	F	SFR	SFR with copper plumbing with lead solder installed before 1988
Other	OT	SFR, MFR, Or BLDG	If no Tier 1, 2, 3 sites, use sites representative of plumbing commonly found throughout the supply

Service Line and Interior Plumbing Material: Enter the appropriate codes from the table below in the Service Line Material and Interior Plumbing Material columns.

Material		
L	=	Lead
CLS	=	Copper with lead solder installed before July 1988
C	=	Copper installed after July 1988
G	=	Galvanized
P	=	Plastic

Site Validation Method: Enter method used to verify site information (permit records, visual inspection, etc.).

NOTE: It is **highly recommended** that the plan contains more sites than are required for standard monitoring. For example, if the standard number of required sampling sites is 10, list 5 or more additional, appropriately tiered sites that may be used as an alternate if an original site is unavailable.

Michigan Lead and Copper Rule
Lead and Copper Tap Sample Site Selection Criteria

Community water supplies must identify a pool of lead and copper sampling sites containing **AT LEAST** the number of sites necessary to conduct **STANDARD** monitoring (see instructions for number of required sites). It is highly recommended that the sampling pool contain more sites than required in case routine sites are unavailable at time of sampling. The sampling pool must target high risk sites using the criteria below.

- **Samples must be collected from Tier 1 sites, unless …**
- insufficient Tier 1 sampling sites are available, then **Tier 2** sites must be used, unless …
- insufficient Tier 1 and Tier 2 sampling sites are available, then **Tier 3** sites must be used.
- If no Tier 1, 2, or 3 sites are available, sampling sites must be representative of plumbing materials typically found throughout the water system.

TIER 1 SITES - Single family residences with either: o Lead service lines (LSL)***** o Interior lead plumbing Multiple family residences (MFR) with LSLs or interior lead plumbing may be used as Tier 1 sites when MFR comprise at least 20 percent of the total service connections.
TIER 2 SITES – Other buildings or multiple family residences with either: o Lead service lines***** o Interior lead plumbing
TIER 3 SITES - Single family residences with: o Copper plumbing with lead solder installed before July 1988
OTHER SITES o Sites representative of plumbing materials commonly found throughout the water supply.
*** Priority should be placed on sites with full LSLs, followed by partial LSLs, followed by lead goosenecks or pigtails.**

Also Note:

- Each round of sampling should be conducted at the **SAME** sampling sites unless …
  - a site no longer meets tiering criteria (for example, a site is no longer Tier 1 after having the lead service line replaced); or
  - a site is unavailable (for example, a site has no water service, resident refuses to participate, etc.)
- **DO NOT** sample from outside hose spigots or utility sinks.
  - For residential sites, samples **MUST BE** collected from kitchen or bathroom taps typically used for consumption. For non-residential sites, samples **MUST BE** collected from taps typically used for consumption.
- Samples **MAY NOT** be taken from taps that have point of use or point of entry treatment devices designed to remove inorganic contaminants, such as an iron removal filter, reverse osmosis system, or water softener.

Lead and Copper Sampling Pool Form Instructions

Water Supply Name, WSSN, and County: Enter your water supply information.

Standard Number of Sites Required: Enter the standard number of sites you are required to sample based on your population.

Reduced Number of Sites Required: Enter the number of sites you would be required to sample if the MDEQ reduces your monitoring.

People Served	Standard Sites	Reduced Sites
More than 100,000	100	50
10,001 to 100,000	60	30
3,301 to 10,000	40	20
501 to 3,300	20	10
101 to 500	10	5
Fewer than 101	5	5

Address: Enter the street number or other unique identifier (such as lot or unit number) of the sampling site and include the city if the water utility services multiple cities.

Tier, Category, and Structure Type: Enter the appropriate codes from the table below in the Tier, Category, and Structure Type columns to identify the selection criteria for each site.

Tier	Category	Structure Type	Description
Tier 1	A	SFR	Single Family Residence (SFR) with lead service line
	B	SFR	SFR with interior lead plumbing
	C	MFR	Multi-family Residence (MFR) if MFRs comprise at least 20% of total service connections
Tier 2	D	MFR or BLDG	MFR or other building (BLDG) with lead service line
	E	MFR or BLDG	MFR or other BLDG with interior lead plumbing
Tier 3	F	SFR	SFR with copper plumbing with lead solder installed before 1988
Other	OT	SFR, MFR, Or BLDG	If no Tier 1, 2, 3 sites, use sites representative of plumbing commonly found throughout the supply

Service Line and Interior Plumbing Material: Enter the appropriate codes from the table below in the Service Line Material and Interior Plumbing Material columns.

Material		
L	=	Lead
CLS	=	Copper with lead solder installed before July 1988
C	=	Copper installed after July 1988
G	=	Galvanized
P	=	Plastic

Site Validation Method: Enter method used to verify site information (permit records, visual inspection, etc.).

NOTE: It is **highly recommended** that the plan contains more sites than are required for standard monitoring. For example, if the standard number of required sampling sites is 10, list 5 or more additional, appropriately tiered sites that may be used as an alternate if an original site is unavailable.

MICHIGAN COMMUNITY WATER SUPPLY LEAD AND COPPER TAP SAMPLING POOL (cont.)

WSSN: 02650 **Supply Name:** Gladwin

Site No.	Address	Tier Level	Category	Structure Type	Service Line Material	Interior Plumbing Material	Site Validation Method
00	*Ex: 0000 Any Street – Any Town, MI*	*1*	*A*	*SFR*	*L*	*C*	*Visual*

Use additional pages for water supplies requiring more sampling sites.

Michigan Lead and Copper Rule
Lead and Copper Tap Sample Site Selection Criteria

Community water supplies must identify a pool of lead and copper sampling sites containing **AT LEAST** the number of sites necessary to conduct **STANDARD** monitoring (see instructions for number of required sites). It is highly recommended that the sampling pool contain more sites than required in case routine sites are unavailable at time of sampling. The sampling pool must target high risk sites using the criteria below.

- **Samples must be collected from Tier 1 sites, unless …**
- insufficient Tier 1 sampling sites are available, then **Tier 2** sites must be used, unless …
- insufficient Tier 1 and Tier 2 sampling sites are available, then **Tier 3** sites must be used.
- If no Tier 1, 2, or 3 sites are available, sampling sites must be representative of plumbing materials typically found throughout the water system.

TIER 1 SITES - Single family residences with either: ○ Lead service lines (LSL)* ○ Interior lead plumbing Multiple family residences (MFR) with LSLs or interior lead plumbing may be used as Tier 1 sites when MFR comprise at least 20 percent of the total service connections.
TIER 2 SITES – Other buildings or multiple family residences with either: ○ Lead service lines* ○ Interior lead plumbing
TIER 3 SITES - Single family residences with: ○ Copper plumbing with lead solder installed before July 1988
OTHER SITES ○ Sites representative of plumbing materials commonly found throughout the water supply.
*** Priority should be placed on sites with full LSLs, followed by partial LSLs, followed by lead goosenecks or pigtails.**

Also Note:

- Each round of sampling should be conducted at the **SAME** sampling sites unless …
  - a site no longer meets tiering criteria (for example, a site is no longer Tier 1 after having the lead service line replaced); or
  - a site is unavailable (for example, a site has no water service, resident refuses to participate, etc.)
- **DO NOT** sample from outside hose spigots or utility sinks.
  - For residential sites, samples **MUST BE** collected from kitchen or bathroom taps typically used for consumption. For non-residential sites, samples **MUST BE** collected from taps typically used for consumption.
- Samples **MAY NOT** be taken from taps that have point of use or point of entry treatment devices designed to remove inorganic contaminants, such as an iron removal filter, reverse osmosis system, or water softener.

Lead and Copper Sampling Pool Form Instructions

Water Supply Name, WSSN, and County: Enter your water supply information.

Standard Number of Sites Required: Enter the standard number of sites you are required to sample based on your population.

Reduced Number of Sites Required: Enter the number of sites you would be required to sample if the MDEQ reduces your monitoring.

People Served	Standard Sites	Reduced Sites
More than 100,000	100	50
10,001 to 100,000	60	30
3,301 to 10,000	40	20
501 to 3,300	20	10
101 to 500	10	5
Fewer than 101	5	5

Address: Enter the street number or other unique identifier (such as lot or unit number) of the sampling site and include the city if the water utility services multiple cities.

Tier, Category, and Structure Type: Enter the appropriate codes from the table below in the Tier, Category, and Structure Type columns to identify the selection criteria for each site.

Tier	Category	Structure Type	Description
Tier 1	A	SFR	Single Family Residence (SFR) with lead service line
	B	SFR	SFR with interior lead plumbing
	C	MFR	Multi-family Residence (MFR) if MFRs comprise at least 20% of total service connections
Tier 2	D	MFR or BLDG	MFR or other building (BLDG) with lead service line
	E	MFR or BLDG	MFR or other BLDG with interior lead plumbing
Tier 3	F	SFR	SFR with copper plumbing with lead solder installed before 1988
Other	OT	SFR, MFR, Or BLDG	If no Tier 1, 2, 3 sites, use sites representative of plumbing commonly found throughout the supply

Service Line and Interior Plumbing Material: Enter the appropriate codes from the table below in the Service Line Material and Interior Plumbing Material columns.

Material		
L	=	Lead
CLS	=	Copper with lead solder installed before July 1988
C	=	Copper installed after July 1988
G	=	Galvanized
P	=	Plastic

Site Validation Method: Enter method used to verify site information (permit records, visual inspection, etc.).

NOTE: It is **highly recommended** that the plan contains more sites than are required for standard monitoring. For example, if the standard number of required sampling sites is 10, list 5 or more additional, appropriately tiered sites that may be used as an alternate if an original site is unavailable.

Michigan Lead and Copper Rule
Lead and Copper Tap Sample Site Selection Criteria

Community water supplies must identify a pool of lead and copper sampling sites containing **AT LEAST** the number of sites necessary to conduct **STANDARD** monitoring (see instructions for number of required sites). It is highly recommended that the sampling pool contain more sites than required in case routine sites are unavailable at time of sampling. The sampling pool must target high risk sites using the criteria below.

- **Samples must be collected from Tier 1 sites, unless ...**
- insufficient Tier 1 sampling sites are available, then **Tier 2** sites must be used, unless ...
- insufficient Tier 1 and Tier 2 sampling sites are available, then **Tier 3** sites must be used.
- If no Tier 1, 2, or 3 sites are available, sampling sites must be representative of plumbing materials typically found throughout the water system.

TIER 1 SITES - Single family residences with either: o Lead service lines (LSL)* o Interior lead plumbing Multiple family residences (MFR) with LSLs or interior lead plumbing may be used as Tier 1 sites when MFR comprise at least 20 percent of the total service connections.
TIER 2 SITES – Other buildings or multiple family residences with either: o Lead service lines* o Interior lead plumbing
TIER 3 SITES - Single family residences with: o Copper plumbing with lead solder installed before July 1988
OTHER SITES o Sites representative of plumbing materials commonly found throughout the water supply.
*** Priority should be placed on sites with full LSLs, followed by partial LSLs, followed by lead goosenecks or pigtails.**

Also Note:

- Each round of sampling should be conducted at the **SAME** sampling sites unless ...
  - a site no longer meets tiering criteria (for example, a site is no longer Tier 1 after having the lead service line replaced); or
  - a site is unavailable (for example, a site has no water service, resident refuses to participate, etc.)
- **DO NOT** sample from outside hose spigots or utility sinks.
  - For residential sites, samples **MUST BE** collected from kitchen or bathroom taps typically used for consumption. For non-residential sites, samples **MUST BE** collected from taps typically used for consumption.
- Samples **MAY NOT** be taken from taps that have point of use or point of entry treatment devices designed to remove inorganic contaminants, such as an iron removal filter, reverse osmosis system, or water softener.

Lead and Copper Sampling Pool Form Instructions

Water Supply Name, WSSN, and County: Enter your water supply information.

Standard Number of Sites Required: Enter the standard number of sites you are required to sample based on your population.

Reduced Number of Sites Required: Enter the number of sites you would be required to sample if the MDEQ reduces your monitoring.

People Served	Standard Sites	Reduced Sites
More than 100,000	100	50
10,001 to 100,000	60	30
3,301 to 10,000	40	20
501 to 3,300	20	10
101 to 500	10	5
Fewer than 101	5	5

Address: Enter the street number or other unique identifier (such as lot or unit number) of the sampling site and include the city if the water utility services multiple cities.

Tier, Category, and Structure Type: Enter the appropriate codes from the table below in the Tier, Category, and Structure Type columns to identify the selection criteria for each site.

Tier	Category	Structure Type	Description
Tier 1	A	SFR	Single Family Residence (SFR) with lead service line
	B	SFR	SFR with interior lead plumbing
	C	MFR	Multi-family Residence (MFR) if MFRs comprise at least 20% of total service connections
Tier 2	D	MFR or BLDG	MFR or other building (BLDG) with lead service line
	E	MFR or BLDG	MFR or other BLDG with interior lead plumbing
Tier 3	F	SFR	SFR with copper plumbing with lead solder installed before 1988
Other	OT	SFR, MFR, Or BLDG	If no Tier 1, 2, 3 sites, use sites representative of plumbing commonly found throughout the supply

Service Line and Interior Plumbing Material: Enter the appropriate codes from the table below in the Service Line Material and Interior Plumbing Material columns.

Material		
L	=	Lead
CLS	=	Copper with lead solder installed before July 1988
C	=	Copper installed after July 1988
G	=	Galvanized
P	=	Plastic

Site Validation Method: Enter method used to verify site information (permit records, visual inspection, etc.).

NOTE: It is **highly recommended** that the plan contains more sites than are required for standard monitoring. For example, if the standard number of required sampling sites is 10, list 5 or more additional, appropriately tiered sites that may be used as an alternate if an original site is unavailable.

MICHIGAN DEPARTMENT OF ENVIRONMENTAL QUALITY
DRINKING WATER AND MUNICIPAL ASSISTANCE DIVISION

SAMPLING PLAN – LEAD AND COPPER

Issued under authority of the Michigan Safe Drinking Water Act, 1976 PA 399, and Administrative Rules, as amended. Administrative Rule R 325.10710a requires a water supply to monitor for lead and copper according to a pool of targeted sampling sites in accordance with designated site selection criteria. Complete and submit this form to MDEQ.

SAMPLING PLAN – LEAD AND COPPER

Issued under authority of the Michigan Safe Drinking Water Act, 1976 PA 399, and Administrative Rules, as amended. Administrative Rule R 325.10710a requires a water supply to monitor for lead and copper according to a pool of targeted sampling sites in accordance with designated site selection criteria. Complete and submit this form to MDEQ.

Michigan Lead and Copper Rule
Lead and Copper Tap Sample Site Selection Criteria

Community water supplies must identify a pool of lead and copper sampling sites containing **AT LEAST** the number of sites necessary to conduct **STANDARD** monitoring (see instructions for number of required sites). It is highly recommended that the sampling pool contain more sites than required in case routine sites are unavailable at time of sampling. The sampling pool must target high risk sites using the criteria below.

- **Samples must be collected from Tier 1 sites, unless ...**
- insufficient Tier 1 sampling sites are available, then **Tier 2** sites must be used, unless ...
- insufficient Tier 1 and Tier 2 sampling sites are available, then **Tier 3** sites must be used.
- If no Tier 1, 2, or 3 sites are available, sampling sites must be representative of plumbing materials typically found throughout the water system.

TIER 1 SITES - Single family residences with either:

- Lead service lines (LSL)*
- Interior lead plumbing

Multiple family residences (MFR) with LSLs or interior lead plumbing may be used as Tier 1 sites when MFR comprise at least 20 percent of the total service connections.

TIER 2 SITES – Other buildings or multiple family residences with either:

- Lead service lines*
- Interior lead plumbing

TIER 3 SITES - Single family residences with:

- Copper plumbing with lead solder installed before July 1988

OTHER SITES

- Sites representative of plumbing materials commonly found throughout the water supply.

*** Priority should be placed on sites with full LSLs, followed by partial LSLs, followed by lead goosenecks or pigtails.**

Also Note:

- Each round of sampling should be conducted at the **SAME** sampling sites unless ...
  - a site no longer meets tiering criteria (for example, a site is no longer Tier 1 after having the lead service line replaced); or
  - a site is unavailable (for example, a site has no water service, resident refuses to participate, etc.)
- **DO NOT** sample from outside hose spigots or utility sinks.
  - For residential sites, samples **MUST BE** collected from kitchen or bathroom taps typically used for consumption. For non-residential sites, samples **MUST BE** collected from taps typically used for consumption.

- Samples **MAY NOT** be taken from taps that have point of use or point of entry treatment devices designed to remove inorganic contaminants, such as an iron removal filter, reverse osmosis system, or water softener.

Lead and Copper Sampling Pool Form Instructions

Water Supply Name, WSSN, and County: Enter your water supply information.

Standard Number of Sites Required: Enter the standard number of sites you are required to sample based on your population.

Reduced Number of Sites Required: Enter the number of sites you would be required to sample if the MDEQ reduces your monitoring.

People Served	Standard Sites	Reduced Sites
More than 100,000	100	50
10,001 to 100,000	60	30
3,301 to 10,000	40	20
501 to 3,300	20	10
101 to 500	10	5
Fewer than 101	5	5

Address: Enter the street number or other unique identifier (such as lot or unit number) of the sampling site and include the city if the water utility services multiple cities.

Tier, Category, and Structure Type: Enter the appropriate codes from the table below in the Tier, Category, and Structure Type columns to identify the selection criteria for each site.

Tier	Category	Structure Type	Description
Tier 1	A	SFR	Single Family Residence (SFR) with lead service line
	B	SFR	SFR with interior lead plumbing
	C	MFR	Multi-family Residence (MFR) if MFRs comprise at least 20% of total service connections
Tier 2	D	MFR or BLDG	MFR or other building (BLDG) with lead service line
	E	MFR or BLDG	MFR or other BLDG with interior lead plumbing
Tier 3	F	SFR	SFR with copper plumbing with lead solder installed before 1988
Other	OT	SFR, MFR, Or BLDG	If no Tier 1, 2, 3 sites, use sites representative of plumbing commonly found throughout the supply

Service Line and Interior Plumbing Material: Enter the appropriate codes from the table below in the Service Line Material and Interior Plumbing Material columns.

Material		
L	=	Lead
CLS	=	Copper with lead solder installed before July 1988
C	=	Copper installed after July 1988
G	=	Galvanized
P	=	Plastic

Site Validation Method: Enter method used to verify site information (permit records, visual inspection, etc.).

NOTE: It is **highly recommended** that the plan contains more sites than are required for standard monitoring. For example, if the standard number of required sampling sites is 10, list 5 or more additional, appropriately tiered sites that may be used as an alternate if an original site is unavailable.

MICHIGAN DEPARTMENT OF ENVIRONMENTAL QUALITY
DRINKING WATER AND MUNICIPAL ASSISTANCE DIVISION

SAMPLING PLAN – LEAD AND COPPER

Issued under authority of the Michigan Safe Drinking Water Act, 1976 PA 399, and Administrative Rules, as amended. Administrative Rule R 325.10710a requires a water supply to monitor for lead and copper according to a pool of targeted sampling sites in accordance with designated site selection criteria. Complete and submit this form to MDEQ.

Michigan Lead and Copper Rule
Lead and Copper Tap Sample Site Selection Criteria

Community water supplies must identify a pool of lead and copper sampling sites containing **AT LEAST** the number of sites necessary to conduct **STANDARD** monitoring (see instructions for number of required sites). It is highly recommended that the sampling pool contain more sites than required in case routine sites are unavailable at time of sampling. The sampling pool must target high risk sites using the criteria below.

- **Samples must be collected from Tier 1 sites, unless …**
- insufficient Tier 1 sampling sites are available, then **Tier 2** sites must be used, unless …
- insufficient Tier 1 and Tier 2 sampling sites are available, then **Tier 3** sites must be used.
- If no Tier 1, 2, or 3 sites are available, sampling sites must be representative of plumbing materials typically found throughout the water system.

TIER 1 SITES - Single family residences with either: o Lead service lines (LSL)***** o Interior lead plumbing Multiple family residences (MFR) with LSLs or interior lead plumbing may be used as Tier 1 sites when MFR comprise at least 20 percent of the total service connections.
TIER 2 SITES – Other buildings or multiple family residences with either: o Lead service lines***** o Interior lead plumbing
TIER 3 SITES - Single family residences with: o Copper plumbing with lead solder installed before July 1988
OTHER SITES o Sites representative of plumbing materials commonly found throughout the water supply.
*** Priority should be placed on sites with full LSLs, followed by partial LSLs, followed by lead goosenecks or pigtails.**

Also Note:

- Each round of sampling should be conducted at the **SAME** sampling sites unless …
  - a site no longer meets tiering criteria (for example, a site is no longer Tier 1 after having the lead service line replaced); or
  - a site is unavailable (for example, a site has no water service, resident refuses to participate, etc.)
- **DO NOT** sample from outside hose spigots or utility sinks.
  - For residential sites, samples **MUST BE** collected from kitchen or bathroom taps typically used for consumption. For non-residential sites, samples **MUST BE** collected from taps typically used for consumption.
- Samples **MAY NOT** be taken from taps that have point of use or point of entry treatment devices designed to remove inorganic contaminants, such as an iron removal filter, reverse osmosis system, or water softener.

Lead and Copper Sampling Pool Form Instructions

Water Supply Name, WSSN, and County: Enter your water supply information.

Standard Number of Sites Required: Enter the standard number of sites you are required to sample based on your population.

Reduced Number of Sites Required: Enter the number of sites you would be required to sample if the MDEQ reduces your monitoring.

People Served	Standard Sites	Reduced Sites
More than 100,000	100	50
10,001 to 100,000	60	30
3,301 to 10,000	40	20
501 to 3,300	20	10
101 to 500	10	5
Fewer than 101	5	5

Address: Enter the street number or other unique identifier (such as lot or unit number) of the sampling site and include the city if the water utility services multiple cities.

Tier, Category, and Structure Type: Enter the appropriate codes from the table below in the Tier, Category, and Structure Type columns to identify the selection criteria for each site.

Tier	Category	Structure Type	Description
Tier 1	A	SFR	Single Family Residence (SFR) with lead service line
	B	SFR	SFR with interior lead plumbing
	C	MFR	Multi-family Residence (MFR) if MFRs comprise at least 20% of total service connections
Tier 2	D	MFR or BLDG	MFR or other building (BLDG) with lead service line
	E	MFR or BLDG	MFR or other BLDG with interior lead plumbing
Tier 3	F	SFR	SFR with copper plumbing with lead solder installed before 1988
Other	OT	SFR, MFR, Or BLDG	If no Tier 1, 2, 3 sites, use sites representative of plumbing commonly found throughout the supply

Service Line and Interior Plumbing Material: Enter the appropriate codes from the table below in the Service Line Material and Interior Plumbing Material columns.

Material		
L	=	Lead
CLS	=	Copper with lead solder installed before July 1988
C	=	Copper installed after July 1988
G	=	Galvanized
P	=	Plastic

Site Validation Method: Enter method used to verify site information (permit records, visual inspection, etc.).

NOTE: It is **highly recommended** that the plan contains more sites than are required for standard monitoring. For example, if the standard number of required sampling sites is 10, list 5 or more additional, appropriately tiered sites that may be used as an alternate if an original site is unavailable.

SAMPLING PLAN – LEAD AND COPPER

Issued under authority of the Michigan Safe Drinking Water Act, 1976 PA 399, and Administrative Rules, as amended. Administrative Rule R 325.10710a requires a water supply to monitor for lead and copper according to a pool of targeted sampling sites in accordance with designated site selection criteria. Complete and submit this form to MDEQ.

Michigan Lead and Copper Rule
Lead and Copper Tap Sample Site Selection Criteria

Community water supplies must identify a pool of lead and copper sampling sites containing **AT LEAST** the number of sites necessary to conduct **STANDARD** monitoring (see instructions for number of required sites). It is highly recommended that the sampling pool contain more sites than required in case routine sites are unavailable at time of sampling. The sampling pool must target high risk sites using the criteria below.

- **Samples must be collected from Tier 1 sites, unless ...**
- insufficient Tier 1 sampling sites are available, then **Tier 2** sites must be used, unless ...
- insufficient Tier 1 and Tier 2 sampling sites are available, then **Tier 3** sites must be used.
- If no Tier 1, 2, or 3 sites are available, sampling sites must be representative of plumbing materials typically found throughout the water system.

TIER 1 SITES - Single family residences with either: o Lead service lines (LSL)* o Interior lead plumbing Multiple family residences (MFR) with LSLs or interior lead plumbing may be used as Tier 1 sites when MFR comprise at least 20 percent of the total service connections.
TIER 2 SITES – Other buildings or multiple family residences with either: o Lead service lines* o Interior lead plumbing
TIER 3 SITES - Single family residences with: o Copper plumbing with lead solder installed before July 1988
OTHER SITES o Sites representative of plumbing materials commonly found throughout the water supply.
*** Priority should be placed on sites with full LSLs, followed by partial LSLs, followed by lead goosenecks or pigtails.**

Also Note:

- Each round of sampling should be conducted at the **SAME** sampling sites unless ...
  - a site no longer meets tiering criteria (for example, a site is no longer Tier 1 after having the lead service line replaced); or
  - a site is unavailable (for example, a site has no water service, resident refuses to participate, etc.)
- **DO NOT** sample from outside hose spigots or utility sinks.
  - For residential sites, samples **MUST BE** collected from kitchen or bathroom taps typically used for consumption. For non-residential sites, samples **MUST BE** collected from taps typically used for consumption.
- Samples **MAY NOT** be taken from taps that have point of use or point of entry treatment devices designed to remove inorganic contaminants, such as an iron removal filter, reverse osmosis system, or water softener.

Lead and Copper Sampling Pool Form Instructions

Water Supply Name, WSSN, and County: Enter your water supply information.

Standard Number of Sites Required: Enter the standard number of sites you are required to sample based on your population.

Reduced Number of Sites Required: Enter the number of sites you would be required to sample if the MDEQ reduces your monitoring.

People Served	Standard Sites	Reduced Sites
More than 100,000	100	50
10,001 to 100,000	60	30
3,301 to 10,000	40	20
501 to 3,300	20	10
101 to 500	10	5
Fewer than 101	5	5

Address: Enter the street number or other unique identifier (such as lot or unit number) of the sampling site and include the city if the water utility services multiple cities.

Tier, Category, and Structure Type: Enter the appropriate codes from the table below in the Tier, Category, and Structure Type columns to identify the selection criteria for each site.

Tier	Category	Structure Type	Description
Tier 1	A	SFR	Single Family Residence (SFR) with lead service line
	B	SFR	SFR with interior lead plumbing
	C	MFR	Multi-family Residence (MFR) if MFRs comprise at least 20% of total service connections
Tier 2	D	MFR or BLDG	MFR or other building (BLDG) with lead service line
	E	MFR or BLDG	MFR or other BLDG with interior lead plumbing
Tier 3	F	SFR	SFR with copper plumbing with lead solder installed before 1988
Other	OT	SFR, MFR, Or BLDG	If no Tier 1, 2, 3 sites, use sites representative of plumbing commonly found throughout the supply

Service Line and Interior Plumbing Material: Enter the appropriate codes from the table below in the Service Line Material and Interior Plumbing Material columns.

Material		
L	=	Lead
CLS	=	Copper with lead solder installed before July 1988
C	=	Copper installed after July 1988
G	=	Galvanized
P	=	Plastic

Site Validation Method: Enter method used to verify site information (permit records, visual inspection, etc.).

NOTE: It is **highly recommended** that the plan contains more sites than are required for standard monitoring. For example, if the standard number of required sampling sites is 10, list 5 or more additional, appropriately tiered sites that may be used as an alternate if an original site is unavailable.

MICHIGAN DEPARTMENT OF ENVIRONMENTAL QUALITY
DRINKING WATER AND MUNICIPAL ASSISTANCE DIVISION

SAMPLING PLAN – LEAD AND COPPER

Issued under authority of the Michigan Safe Drinking Water Act, 1976 PA 399, and Administrative Rules, as amended. Administrative Rule R 325.10710a requires a water supply to monitor for lead and copper according to a pool of targeted sampling sites in accordance with designated site selection criteria. Complete and submit this form to MDEQ.

Michigan Lead and Copper Rule
Lead and Copper Tap Sample Site Selection Criteria

Community water supplies must identify a pool of lead and copper sampling sites containing **AT LEAST** the number of sites necessary to conduct **STANDARD** monitoring (see instructions for number of required sites). It is highly recommended that the sampling pool contain more sites than required in case routine sites are unavailable at time of sampling. The sampling pool must target high risk sites using the criteria below.

- **Samples must be collected from Tier 1 sites, unless …**
- insufficient Tier 1 sampling sites are available, then **Tier 2** sites must be used, unless …
- insufficient Tier 1 and Tier 2 sampling sites are available, then **Tier 3** sites must be used.
- If no Tier 1, 2, or 3 sites are available, sampling sites must be representative of plumbing materials typically found throughout the water system.

TIER 1 SITES - Single family residences with either: o Lead service lines (LSL)***** o Interior lead plumbing Multiple family residences (MFR) with LSLs or interior lead plumbing may be used as Tier 1 sites when MFR comprise at least 20 percent of the total service connections.
TIER 2 SITES – Other buildings or multiple family residences with either: o Lead service lines***** o Interior lead plumbing
TIER 3 SITES - Single family residences with: o Copper plumbing with lead solder installed before July 1988
OTHER SITES o Sites representative of plumbing materials commonly found throughout the water supply.
*** Priority should be placed on sites with full LSLs, followed by partial LSLs, followed by lead goosenecks or pigtails.**

Also Note:

- Each round of sampling should be conducted at the **SAME** sampling sites unless …
  - a site no longer meets tiering criteria (for example, a site is no longer Tier 1 after having the lead service line replaced); or
  - a site is unavailable (for example, a site has no water service, resident refuses to participate, etc.)
- **DO NOT** sample from outside hose spigots or utility sinks.
  - For residential sites, samples **MUST BE** collected from kitchen or bathroom taps typically used for consumption. For non-residential sites, samples **MUST BE** collected from taps typically used for consumption.

- Samples **MAY NOT** be taken from taps that have point of use or point of entry treatment devices designed to remove inorganic contaminants, such as an iron removal filter, reverse osmosis system, or water softener.

Lead and Copper Sampling Pool Form Instructions

Water Supply Name, WSSN, and County: Enter your water supply information.

Standard Number of Sites Required: Enter the standard number of sites you are required to sample based on your population.

Reduced Number of Sites Required: Enter the number of sites you would be required to sample if the MDEQ reduces your monitoring.

People Served	Standard Sites	Reduced Sites
More than 100,000	100	50
10,001 to 100,000	60	30
3,301 to 10,000	40	20
501 to 3,300	20	10
101 to 500	10	5
Fewer than 101	5	5

Address: Enter the street number or other unique identifier (such as lot or unit number) of the sampling site and include the city if the water utility services multiple cities.

Tier, Category, and Structure Type: Enter the appropriate codes from the table below in the Tier, Category, and Structure Type columns to identify the selection criteria for each site.

Tier	Category	Structure Type	Description
Tier 1	A	SFR	Single Family Residence (SFR) with lead service line
	B	SFR	SFR with interior lead plumbing
	C	MFR	Multi-family Residence (MFR) if MFRs comprise at least 20% of total service connections
Tier 2	D	MFR or BLDG	MFR or other building (BLDG) with lead service line
	E	MFR or BLDG	MFR or other BLDG with interior lead plumbing
Tier 3	F	SFR	SFR with copper plumbing with lead solder installed before 1988
Other	OT	SFR, MFR, Or BLDG	If no Tier 1, 2, 3 sites, use sites representative of plumbing commonly found throughout the supply

Service Line and Interior Plumbing Material: Enter the appropriate codes from the table below in the Service Line Material and Interior Plumbing Material columns.

Material		
L	=	Lead
CLS	=	Copper with lead solder installed before July 1988
C	=	Copper installed after July 1988
G	=	Galvanized
P	=	Plastic

Site Validation Method: Enter method used to verify site information (permit records, visual inspection, etc.).

NOTE: It is **highly recommended** that the plan contains more sites than are required for standard monitoring. For example, if the standard number of required sampling sites is 10, list 5 or more additional, appropriately tiered sites that may be used as an alternate if an original site is unavailable.

MICHIGAN DEPARTMENT OF ENVIRONMENTAL QUALITY
DRINKING WATER AND MUNICIPAL ASSISTANCE DIVISION

SAMPLING PLAN – LEAD AND COPPER

Issued under authority of the Michigan Safe Drinking Water Act, 1976 PA 399, and Administrative Rules, as amended. Administrative Rule R 325.10710a requires a water supply to monitor for lead and copper according to a pool of targeted sampling sites in accordance with designated site selection criteria. Complete and submit this form to MDEQ.

[1] Tier	[2] Category	Description
Tier 1	A*	Single Family w/ lead service line
	B	Single Family w/ interior lead plumbing
	C	Multi Family Residence (MFR) w/ a lead service line*, or lead interior plumbing, if MFRs comprise at least 20% of total service connections.
	* Use Form A if any samples collected from sites with lead service lines to allow reporting of 1st and 5th liter results.	
Tier 2	D*	Multi Family or building w/ lead service line
	E	Multi Family or building w/ interior lead plumbing
Tier 3	F	Single Family w/ copper plumbing with lead solder installed before July 1988
Other	OT	If no Tier 1, 2, 3 sites, use sites representative of plumbing commonly found throughout the supply.

[3] Material
L* = Lead C = Copper G = Galvanized P = Plastic * Use Form A if any samples collected from sites with lead service lines to report 1st and 5th liter results.

[4] Tap Type
K = Kitchen Sink B = Bathroom Sink O = Other (not an option for residential sites)

Michigan Lead and Copper Rule
Lead and Copper Tap Sample Site Selection Criteria

Community water supplies must identify a pool of lead and copper sampling sites containing **AT LEAST** the number of sites necessary to conduct **STANDARD** monitoring (see instructions for number of required sites). It is highly recommended that the sampling pool contain more sites than required in case routine sites are unavailable at time of sampling. The sampling pool must target high risk sites using the criteria below.

- **Samples must be collected from Tier 1 sites, unless ...**
- insufficient Tier 1 sampling sites are available, then **Tier 2** sites must be used, unless ...
- insufficient Tier 1 and Tier 2 sampling sites are available, then **Tier 3** sites must be used.
- If no Tier 1, 2, or 3 sites are available, sampling sites must be representative of plumbing materials typically found throughout the water system.

TIER 1 SITES - Single family residences with either: o Lead service lines (LSL)* o Interior lead plumbing Multiple family residences (MFR) with LSLs or interior lead plumbing may be used as Tier 1 sites when MFR comprise at least 20 percent of the total service connections.
TIER 2 SITES – Other buildings or multiple family residences with either: o Lead service lines* o Interior lead plumbing
TIER 3 SITES - Single family residences with: o Copper plumbing with lead solder installed before July 1988
OTHER SITES o Sites representative of plumbing materials commonly found throughout the water supply.
*** Priority should be placed on sites with full LSLs, followed by partial LSLs, followed by lead goosenecks or pigtails.**

Also Note:

- Each round of sampling should be conducted at the **SAME** sampling sites unless ...
  - a site no longer meets tiering criteria (for example, a site is no longer Tier 1 after having the lead service line replaced); or
  - a site is unavailable (for example, a site has no water service, resident refuses to participate, etc.)
- **DO NOT** sample from outside hose spigots or utility sinks.
  - For residential sites, samples **MUST BE** collected from kitchen or bathroom taps typically used for consumption. For non-residential sites, samples **MUST BE** collected from taps typically used for consumption.
- Samples **MAY NOT** be taken from taps that have point of use or point of entry treatment devices designed to remove inorganic contaminants, such as an iron removal filter, reverse osmosis system, or water softener.

Lead and Copper Sampling Pool Form Instructions

Water Supply Name, WSSN, and County: Enter your water supply information.

Standard Number of Sites Required: Enter the standard number of sites you are required to sample based on your population.

Reduced Number of Sites Required: Enter the number of sites you would be required to sample if the MDEQ reduces your monitoring.

People Served	Standard Sites	Reduced Sites
More than 100,000	100	50
10,001 to 100,000	60	30
3,301 to 10,000	40	20
501 to 3,300	20	10
101 to 500	10	5
Fewer than 101	5	5

Address: Enter the street number or other unique identifier (such as lot or unit number) of the sampling site and include the city if the water utility services multiple cities.

Tier, Category, and Structure Type: Enter the appropriate codes from the table below in the Tier, Category, and Structure Type columns to identify the selection criteria for each site.

Tier	Category	Structure Type	Description
Tier 1	A	SFR	Single Family Residence (SFR) with lead service line
	B	SFR	SFR with interior lead plumbing
	C	MFR	Multi-family Residence (MFR) if MFRs comprise at least 20% of total service connections
Tier 2	D	MFR or BLDG	MFR or other building (BLDG) with lead service line
	E	MFR or BLDG	MFR or other BLDG with interior lead plumbing
Tier 3	F	SFR	SFR with copper plumbing with lead solder installed before 1988
Other	OT	SFR, MFR, Or BLDG	If no Tier 1, 2, 3 sites, use sites representative of plumbing commonly found throughout the supply

Service Line and Interior Plumbing Material: Enter the appropriate codes from the table below in the Service Line Material and Interior Plumbing Material columns.

Material		
L	=	Lead
CLS	=	Copper with lead solder installed before July 1988
C	=	Copper installed after July 1988
G	=	Galvanized
P	=	Plastic

Site Validation Method: Enter method used to verify site information (permit records, visual inspection, etc.).

NOTE: It is **highly recommended** that the plan contains more sites than are required for standard monitoring. For example, if the standard number of required sampling sites is 10, list 5 or more additional, appropriately tiered sites that may be used as an alternate if an original site is unavailable.

MICHIGAN DEPARTMENT OF ENVIRONMENTAL QUALITY
DRINKING WATER AND MUNICIPAL ASSISTANCE DIVISION

SAMPLING PLAN – LEAD AND COPPER

Issued under authority of the Michigan Safe Drinking Water Act, 1976 PA 399, and Administrative Rules, as amended. Administrative Rule R 325.10710a requires a water supply to monitor for lead and copper according to a pool of targeted sampling sites in accordance with designated site selection criteria. Complete and submit this form to MDEQ.

(*) Sample site 95 – 100, have good records of a lead service line...homeowner wants to be on sample pool. Inside pipe verification still pending. Homeowner will call with info, email a photo, or schedule an appointment for city serviceman to check for them.

Michigan Lead and Copper Rule
Lead and Copper Tap Sample Site Selection Criteria

Community water supplies must identify a pool of lead and copper sampling sites containing **AT LEAST** the number of sites necessary to conduct **STANDARD** monitoring (see instructions for number of required sites). It is highly recommended that the sampling pool contain more sites than required in case routine sites are unavailable at time of sampling. The sampling pool must target high risk sites using the criteria below.

- **Samples must be collected from Tier 1 sites, unless …**
- insufficient Tier 1 sampling sites are available, then **Tier 2** sites must be used, unless …
- insufficient Tier 1 and Tier 2 sampling sites are available, then **Tier 3** sites must be used.
- If no Tier 1, 2, or 3 sites are available, sampling sites must be representative of plumbing materials typically found throughout the water system.

TIER 1 SITES - Single family residences with either: ○ Lead service lines (LSL)* ○ Interior lead plumbing Multiple family residences (MFR) with LSLs or interior lead plumbing may be used as Tier 1 sites when MFR comprise at least 20 percent of the total service connections.
TIER 2 SITES – Other buildings or multiple family residences with either: ○ Lead service lines* ○ Interior lead plumbing
TIER 3 SITES - Single family residences with: ○ Copper plumbing with lead solder installed before July 1988
OTHER SITES ○ Sites representative of plumbing materials commonly found throughout the water supply.
*** Priority should be placed on sites with full LSLs, followed by partial LSLs, followed by lead goosenecks or pigtails.**

Also Note:

- Each round of sampling should be conducted at the **SAME** sampling sites unless …
  - a site no longer meets tiering criteria (for example, a site is no longer Tier 1 after having the lead service line replaced); or
  - a site is unavailable (for example, a site has no water service, resident refuses to participate, etc.)
- **DO NOT** sample from outside hose spigots or utility sinks.
  - For residential sites, samples **MUST BE** collected from kitchen or bathroom taps typically used for consumption. For non-residential sites, samples **MUST BE** collected from taps typically used for consumption.
- Samples **MAY NOT** be taken from taps that have point of use or point of entry treatment devices designed to remove inorganic contaminants, such as an iron removal filter, reverse osmosis system, or water softener.

Lead and Copper Sampling Pool Form Instructions

Water Supply Name, WSSN, and County: Enter your water supply information.

Standard Number of Sites Required: Enter the standard number of sites you are required to sample based on your population.

Reduced Number of Sites Required: Enter the number of sites you would be required to sample if the MDEQ reduces your monitoring.

People Served	Standard Sites	Reduced Sites
More than 100,000	100	50
10,001 to 100,000	60	30
3,301 to 10,000	40	20
501 to 3,300	20	10
101 to 500	10	5
Fewer than 101	5	5

Address: Enter the street number or other unique identifier (such as lot or unit number) of the sampling site and include the city if the water utility services multiple cities.

Tier, Category, and Structure Type: Enter the appropriate codes from the table below in the Tier, Category, and Structure Type columns to identify the selection criteria for each site.

Tier	Category	Structure Type	Description
Tier 1	A	SFR	Single Family Residence (SFR) with lead service line
	B	SFR	SFR with interior lead plumbing
	C	MFR	Multi-family Residence (MFR) if MFRs comprise at least 20% of total service connections
Tier 2	D	MFR or BLDG	MFR or other building (BLDG) with lead service line
	E	MFR or BLDG	MFR or other BLDG with interior lead plumbing
Tier 3	F	SFR	SFR with copper plumbing with lead solder installed before 1988
Other	OT	SFR, MFR, Or BLDG	If no Tier 1, 2, 3 sites, use sites representative of plumbing commonly found throughout the supply

Service Line and Interior Plumbing Material: Enter the appropriate codes from the table below in the Service Line Material and Interior Plumbing Material columns.

Material		
L	=	Lead
CLS	=	Copper with lead solder installed before July 1988
C	=	Copper installed after July 1988
G	=	Galvanized
P	=	Plastic

Site Validation Method: Enter method used to verify site information (permit records, visual inspection, etc.).

NOTE: It is **highly recommended** that the plan contains more sites than are required for standard monitoring. For example, if the standard number of required sampling sites is 10, list 5 or more additional, appropriately tiered sites that may be used as an alternate if an original site is unavailable.

MICHIGAN DEPARTMENT OF ENVIRONMENTAL QUALITY
DRINKING WATER AND MUNICIPAL ASSISTANCE DIVISION

SAMPLING PLAN – LEAD AND COPPER

Issued under authority of the Michigan Safe Drinking Water Act, 1976 PA 399, and Administrative Rules, as amended. Administrative Rule R 325.10710a requires a water supply to monitor for lead and copper according to a pool of targeted sampling sites in accordance with designated site selection criteria. Complete and submit this form to MDEQ.

Lead service line sample site plan update for City of Hillsdale, WSSN 03170.

City hired Taplin Group to come in to hydro vac down around 750 curb stops last year (2020) to identify what materials were present.

To date, we have confirmed materials used on about 880 services, of those about 34% (about 299) of services are known to be LSL. We also found 4 current sample sites to not be valid tier 1 sites and removed them from the sample site plan.

Many sample sites have "not inspected" for the category as we have not yet gained access to test for lead solder. We will determine if lead solder is present when we actually go and sample these locations.

Out of those found to be LSL, we sent a questionnaire to 240 single family residences, asking if they fit the sample criteria and were willing to participate in sampling. Received about a 17% response rate and added twenty tier 1 sample sites to our site plan.

City plans to hydro vac another 750 to 1000 curb stops in 2021.

Regards,

Jeff Gier
City of Hillsdale BPU

Michigan Lead and Copper Rule
Lead and Copper Tap Sample Site Selection Criteria

Community water supplies must identify a pool of lead and copper sampling sites containing **AT LEAST** the number of sites necessary to conduct **STANDARD** monitoring (see instructions for number of required sites). It is highly recommended that the sampling pool contain more sites than required in case routine sites are unavailable at time of sampling. The sampling pool must target high risk sites using the criteria below.

- **Samples must be collected from Tier 1 sites, unless …**
- insufficient Tier 1 sampling sites are available, then **Tier 2** sites must be used, unless …
- Insufficient Tier 1 and Tier 2 sampling sites are available, then **Tier 3** sites must be used.
- If no Tier 1, 2, or 3 sites are available, sampling sites must be representative of plumbing materials typically found throughout the water system.

TIER 1 SITES - Single family residences with either:

- Lead service lines (LSL)*
- Interior lead plumbing

Multiple family residences (MFR) with LSLs or interior lead plumbing may be used as Tier 1 sites when MFR comprise at least 20 percent of the total service connections.

TIER 2 SITES – Other buildings or multiple family residences with either:

- Lead service lines*
- Interior lead plumbing

TIER 3 SITES - Single family residences with:

- Copper plumbing with lead solder installed before July 1988

OTHER SITES

- Sites representative of plumbing materials commonly found throughout the water supply.

*** Priority should be placed on sites with full LSLs, followed by partial LSLs, followed by lead goosenecks or pigtails.**

Also Note:

- Each round of sampling should be conducted at the **SAME** sampling sites unless …
  - a site no longer meets tiering criteria (for example, a site is no longer Tier 1 after having the lead service line replaced); or

MICHIGAN DEPARTMENT OF ENVIRONMENTAL QUALITY
DRINKING WATER AND MUNICIPAL ASSISTANCE DIVISION

SAMPLING PLAN – LEAD AND COPPER

Issued under authority of the Michigan Safe Drinking Water Act, 1976 PA 399, and Administrative Rules, as amended. Administrative Rule R 325.10710a requires a water supply to monitor for lead and copper according to a pool of targeted sampling sites in accordance with designated site selection criteria. Complete and submit this form to MDEQ.

Use additional pages for water supplies requiring more sampling sites.

Michigan Lead and Copper Rule
Lead and Copper Tap Sample Site Selection Criteria

Community water supplies must identify a pool of lead and copper sampling sites containing **AT LEAST** the number of sites necessary to conduct **STANDARD** monitoring (see instructions for number of required sites). It is highly recommended that the sampling pool contain more sites than required in case routine sites are unavailable at time of sampling. The sampling pool must target high risk sites using the criteria below.

- **Samples must be collected from Tier 1 sites, unless …**
- insufficient Tier 1 sampling sites are available, then **Tier 2** sites must be used, unless …
- insufficient Tier 1 and Tier 2 sampling sites are available, then **Tier 3** sites must be used.
- If no Tier 1, 2, or 3 sites are available, sampling sites must be representative of plumbing materials typically found throughout the water system.

TIER 1 SITES - Single family residences with either: o Lead service lines (LSL)* o Interior lead plumbing Multiple family residences (MFR) with LSLs or interior lead plumbing may be used as Tier 1 sites when MFR comprise at least 20 percent of the total service connections.
TIER 2 SITES – Other buildings or multiple family residences with either: o Lead service lines* o Interior lead plumbing
TIER 3 SITES - Single family residences with: o Copper plumbing with lead solder installed before July 1988
OTHER SITES o Sites representative of plumbing materials commonly found throughout the water supply.
*** Priority should be placed on sites with full LSLs, followed by partial LSLs, followed by lead goosenecks or pigtails.**

Also Note:

- Each round of sampling should be conducted at the **SAME** sampling sites unless …
  - a site no longer meets tiering criteria (for example, a site is no longer Tier 1 after having the lead service line replaced); or
  - a site is unavailable (for example, a site has no water service, resident refuses to participate, etc.)
- **DO NOT** sample from outside hose spigots or utility sinks.
  - For residential sites, samples **MUST BE** collected from kitchen or bathroom taps typically used for consumption. For non-residential sites, samples **MUST BE** collected from taps typically used for consumption.
- Samples **MAY NOT** be taken from taps that have point of use or point of entry treatment devices designed to remove inorganic contaminants, such as an iron removal filter, reverse osmosis system, or water softener.

Lead and Copper Sampling Pool Form Instructions

Water Supply Name, WSSN, and County: Enter your water supply information.

Standard Number of Sites Required: Enter the standard number of sites you are required to sample based on your population.

Reduced Number of Sites Required: Enter the number of sites you would be required to sample if the MDEQ reduces your monitoring.

People Served	Standard Sites	Reduced Sites
More than 100,000	100	50
10,001 to 100,000	60	30
3,301 to 10,000	40	20
501 to 3,300	20	10
101 to 500	10	5
Fewer than 101	5	5

Address: Enter the street number or other unique identifier (such as lot or unit number) of the sampling site and include the city if the water utility services multiple cities.

Tier, Category, and Structure Type: Enter the appropriate codes from the table below in the Tier, Category, and Structure Type columns to identify the selection criteria for each site.

Tier	Category	Structure Type	Description
Tier 1	A	SFR	Single Family Residence (SFR) with lead service line
	B	SFR	SFR with interior lead plumbing
	C	MFR	Multi-family Residence (MFR) if MFRs comprise at least 20% of total service connections
Tier 2	D	MFR or BLDG	MFR or other building (BLDG) with lead service line
	E	MFR or BLDG	MFR or other BLDG with interior lead plumbing
Tier 3	F	SFR	SFR with copper plumbing with lead solder installed before 1988
Other	OT	SFR, MFR, Or BLDG	If no Tier 1, 2, 3 sites, use sites representative of plumbing commonly found throughout the supply

Service Line and Interior Plumbing Material: Enter the appropriate codes from the table below in the Service Line Material and Interior Plumbing Material columns.

Material		
L	=	Lead
CLS	=	Copper with lead solder installed before July 1988
C	=	Copper installed after July 1988
G	=	Galvanized
P	=	Plastic

Site Validation Method: Enter method used to verify site information (permit records, visual inspection, etc.).

NOTE: It is **highly recommended** that the plan contains more sites than are required for standard monitoring. For example, if the standard number of required sampling sites is 10, list 5 or more additional, appropriately tiered sites that may be used as an alternate if an original site is unavailable.

MICHIGAN DEPARTMENT OF ENVIRONMENTAL QUALITY
DRINKING WATER AND MUNICIPAL ASSISTANCE DIVISION

SAMPLING PLAN – LEAD AND COPPER

Issued under authority of the Michigan Safe Drinking Water Act, 1976 PA 399, and Administrative Rules, as amended. Administrative Rule R 325.10710a requires a water supply to monitor for lead and copper according to a pool of targeted sampling sites in accordance with designated site selection criteria. Complete and submit this form to MDEQ.

MICHIGAN DEPARTMENT OF ENVIRONMENTAL QUALITY
DRINKING WATER AND MUNICIPAL ASSISTANCE DIVISION

SAMPLING PLAN – LEAD AND COPPER

Issued under authority of the Michigan Safe Drinking Water Act, 1976 PA 399, and Administrative Rules, as amended. Administrative Rule R 325.10710a requires a water supply to monitor for lead and copper according to a pool of targeted sampling sites in accordance with designated site selection criteria. Complete and submit this form to MDEQ.

SAMPLING PLAN – LEAD AND COPPER

Issued under authority of the Michigan Safe Drinking Water Act, 1976 PA 399, and Administrative Rules, as amended. Administrative Rule R 325.10710a requires a water supply to monitor for lead and copper according to a pool of targeted sampling sites in accordance with designated site selection criteria. Complete and submit this form to MDEQ.

Michigan Lead and Copper Rule
Lead and Copper Tap Sample Site Selection Criteria

Community water supplies must identify a pool of lead and copper sampling sites containing **AT LEAST** the number of sites necessary to conduct **STANDARD** monitoring (see instructions for number of required sites). It is highly recommended that the sampling pool contain more sites than required in case routine sites are unavailable at time of sampling. The sampling pool must target high risk sites using the criteria below.

- **Samples must be collected from Tier 1 sites, unless …**
- insufficient Tier 1 sampling sites are available, then **Tier 2** sites must be used, unless …
- insufficient Tier 1 and Tier 2 sampling sites are available, then **Tier 3** sites must be used.
- If no Tier 1, 2, or 3 sites are available, sampling sites must be representative of plumbing materials typically found throughout the water system.

TIER 1 SITES - Single family residences with either: o Lead service lines (LSL)***** o Interior lead plumbing Multiple family residences (MFR) with LSLs or interior lead plumbing may be used as Tier 1 sites when MFR comprise at least 20 percent of the total service connections.
TIER 2 SITES – Other buildings or multiple family residences with either: o Lead service lines***** o Interior lead plumbing
TIER 3 SITES - Single family residences with: o Copper plumbing with lead solder installed before July 1988
OTHER SITES o Sites representative of plumbing materials commonly found throughout the water supply.
*** Priority should be placed on sites with full LSLs, followed by partial LSLs, followed by lead goosenecks or pigtails.**

Also Note:

- Each round of sampling should be conducted at the **SAME** sampling sites unless …
  - a site no longer meets tiering criteria (for example, a site is no longer Tier 1 after having the lead service line replaced); or
  - a site is unavailable (for example, a site has no water service, resident refuses to participate, etc.)
- **DO NOT** sample from outside hose spigots or utility sinks.
  - For residential sites, samples **MUST BE** collected from kitchen or bathroom taps typically used for consumption. For non-residential sites, samples **MUST BE** collected from taps typically used for consumption.
- Samples **MAY NOT** be taken from taps that have point of use or point of entry treatment devices designed to remove inorganic contaminants, such as an iron removal filter, reverse osmosis

system, or water softener.

Lead and Copper Sampling Pool Form Instructions

Water Supply Name, WSSN, and County: Enter your water supply information.

Standard Number of Sites Required: Enter the standard number of sites you are required to sample based on your population.

Reduced Number of Sites Required: Enter the number of sites you would be required to sample if the MDEQ reduces your monitoring.

People Served	Standard Sites	Reduced Sites
More than 100,000	100	50
10,001 to 100,000	60	30
3,301 to 10,000	40	20
501 to 3,300	20	10
101 to 500	10	5
Fewer than 101	5	5

Address: Enter the street number or other unique identifier (such as lot or unit number) of the sampling site and include the city if the water utility services multiple cities.

Tier, Category, and Structure Type: Enter the appropriate codes from the table below in the Tier, Category, and Structure Type columns to identify the selection criteria for each site.

Tier	Category	Structure Type	Description
Tier 1	A	SFR	Single Family Residence (SFR) with lead service line
	B	SFR	SFR with interior lead plumbing
	C	MFR	Multi-family Residence (MFR) if MFRs comprise at least 20% of total service connections
Tier 2	D	MFR or BLDG	MFR or other building (BLDG) with lead service line
	E	MFR or BLDG	MFR or other BLDG with interior lead plumbing
Tier 3	F	SFR	SFR with copper plumbing with lead solder installed before 1988
Other	OT	SFR, MFR, Or BLDG	If no Tier 1, 2, 3 sites, use sites representative of plumbing commonly found throughout the supply

Service Line and Interior Plumbing Material: Enter the appropriate codes from the table below in the Service Line Material and Interior Plumbing Material columns.

Material		
L	=	Lead
CLS	=	Copper with lead solder installed before July 1988
C	=	Copper installed after July 1988
G	=	Galvanized
P	=	Plastic

Site Validation Method: Enter method used to verify site information (permit records, visual inspection, etc.).

NOTE: It is **highly recommended** that the plan contains more sites than are required for standard monitoring. For example, if the standard number of required sampling sites is 10, list 5 or more additional, appropriately tiered sites that may be used as an alternate if an original site is unavailable.

MICHIGAN DEPARTMENT OF ENVIRONMENTAL QUALITY
DRINKING WATER AND MUNICIPAL ASSISTANCE DIVISION

SAMPLING PLAN – LEAD AND COPPER

Issued under authority of the Michigan Safe Drinking Water Act, 1976 PA 399, and Administrative Rules, as amended. Administrative Rule R 325.10710a requires a water supply to monitor for lead and copper according to a pool of targeted sampling sites in accordance with designated site selection criteria. Complete and submit this form to MDEQ.

Michigan Lead and Copper Rule
Lead and Copper Tap Sample Site Selection Criteria

Community water supplies must identify a pool of lead and copper sampling sites containing **AT LEAST** the number of sites necessary to conduct **STANDARD** monitoring (see instructions for number of required sites). It is highly recommended that the sampling pool contain more sites than required in case routine sites are unavailable at time of sampling. The sampling pool must target high risk sites using the criteria below.

- **Samples must be collected from Tier 1 sites, unless ...**
- insufficient Tier 1 sampling sites are available, then **Tier 2** sites must be used, unless ...
- insufficient Tier 1 and Tier 2 sampling sites are available, then **Tier 3** sites must be used.
- If no Tier 1, 2, or 3 sites are available, sampling sites must be representative of plumbing materials typically found throughout the water system.

TIER 1 SITES - Single family residences with either: o Lead service lines (LSL)* o Interior lead plumbing Multiple family residences (MFR) with LSLs or interior lead plumbing may be used as Tier 1 sites when MFR comprise at least 20 percent of the total service connections.
TIER 2 SITES – Other buildings or multiple family residences with either: o Lead service lines* o Interior lead plumbing
TIER 3 SITES - Single family residences with: o Copper plumbing with lead solder installed before July 1988
OTHER SITES o Sites representative of plumbing materials commonly found throughout the water supply.
*** Priority should be placed on sites with full LSLs, followed by partial LSLs, followed by lead goosenecks or pigtails.**

Also Note:

- Each round of sampling should be conducted at the **SAME** sampling sites unless ...
  - a site no longer meets tiering criteria (for example, a site is no longer Tier 1 after having the lead service line replaced); or
  - a site is unavailable (for example, a site has no water service, resident refuses to participate, etc.)
- **DO NOT** sample from outside hose spigots or utility sinks.
  - For residential sites, samples **MUST BE** collected from kitchen or bathroom taps typically used for consumption. For non-residential sites, samples **MUST BE** collected from taps typically used for consumption.
- Samples **MAY NOT** be taken from taps that have point of use or point of entry treatment devices designed to remove inorganic contaminants, such as an iron removal filter, reverse osmosis system, or water softener.

Lead and Copper Sampling Pool Form Instructions

Water Supply Name, WSSN, and County: Enter your water supply information.

Standard Number of Sites Required: Enter the standard number of sites you are required to sample based on your population.

Reduced Number of Sites Required: Enter the number of sites you would be required to sample if the MDEQ reduces your monitoring.

People Served	Standard Sites	Reduced Sites
More than 100,000	100	50
10,001 to 100,000	60	30
3,301 to 10,000	40	20
501 to 3,300	20	10
101 to 500	10	5
Fewer than 101	5	5

Address: Enter the street number or other unique identifier (such as lot or unit number) of the sampling site and include the city if the water utility services multiple cities.

Tier, Category, and Structure Type: Enter the appropriate codes from the table below in the Tier, Category, and Structure Type columns to identify the selection criteria for each site.

Tier	Category	Structure Type	Description
Tier 1	A	SFR	Single Family Residence (SFR) with lead service line
	B	SFR	SFR with interior lead plumbing
	C	MFR	Multi-family Residence (MFR) if MFRs comprise at least 20% of total service connections
Tier 2	D	MFR or BLDG	MFR or other building (BLDG) with lead service line
	E	MFR or BLDG	MFR or other BLDG with interior lead plumbing
Tier 3	F	SFR	SFR with copper plumbing with lead solder installed before 1988
Other	OT	SFR, MFR, Or BLDG	If no Tier 1, 2, 3 sites, use sites representative of plumbing commonly found throughout the supply

Service Line and Interior Plumbing Material: Enter the appropriate codes from the table below in the Service Line Material and Interior Plumbing Material columns.

Material		
L	=	Lead
CLS	=	Copper with lead solder installed before July 1988
C	=	Copper installed after July 1988
G	=	Galvanized
P	=	Plastic

Site Validation Method: Enter method used to verify site information (permit records, visual inspection, etc.).

NOTE: It is **highly recommended** that the plan contains more sites than are required for standard monitoring. For example, if the standard number of required sampling sites is 10, list 5 or more additional, appropriately tiered sites that may be used as an alternate if an original site is unavailable.

Michigan Lead and Copper Rule
Lead and Copper Tap Sample Site Selection Criteria

Community water supplies must identify a pool of lead and copper sampling sites containing **AT LEAST** the number of sites necessary to conduct **STANDARD** monitoring (see instructions for number of required sites). It is highly recommended that the sampling pool contain more sites than required in case routine sites are unavailable at time of sampling. The sampling pool must target high risk sites using the criteria below.

- **Samples must be collected from Tier 1 sites, unless ...**
- insufficient Tier 1 sampling sites are available, then **Tier 2** sites must be used, unless ...
- insufficient Tier 1 and Tier 2 sampling sites are available, then **Tier 3** sites must be used.
- If no Tier 1, 2, or 3 sites are available, sampling sites must be representative of plumbing materials typically found throughout the water system.

TIER 1 SITES - Single family residences with either: o Lead service lines (LSL)* o Interior lead plumbing Multiple family residences (MFR) with LSLs or interior lead plumbing may be used as Tier 1 sites when MFR comprise at least 20 percent of the total service connections.
TIER 2 SITES – Other buildings or multiple family residences with either: o Lead service lines* o Interior lead plumbing
TIER 3 SITES - Single family residences with: o Copper plumbing with lead solder installed before July 1988
OTHER SITES o Sites representative of plumbing materials commonly found throughout the water supply.
*** Priority should be placed on sites with full LSLs, followed by partial LSLs, followed by lead goosenecks or pigtails.**

Also Note:

- Each round of sampling should be conducted at the **SAME** sampling sites unless ...
  - a site no longer meets tiering criteria (for example, a site is no longer Tier 1 after having the lead service line replaced); or
  - a site is unavailable (for example, a site has no water service, resident refuses to participate, etc.)
- **DO NOT** sample from outside hose spigots or utility sinks.
  - For residential sites, samples **MUST BE** collected from kitchen or bathroom taps typically used for consumption. For non-residential sites, samples **MUST BE** collected from taps typically used for consumption.
- Samples **MAY NOT** be taken from taps that have point of use or point of entry treatment devices designed to remove inorganic contaminants, such as an iron removal filter, reverse osmosis system, or water softener.

Lead and Copper Sampling Pool Form Instructions

Water Supply Name, WSSN, and County: Enter your water supply information.

Standard Number of Sites Required: Enter the standard number of sites you are required to sample based on your population.

Reduced Number of Sites Required: Enter the number of sites you would be required to sample if the MDEQ reduces your monitoring.

People Served	Standard Sites	Reduced Sites
More than 100,000	100	50
10,001 to 100,000	60	30
3,301 to 10,000	40	20
501 to 3,300	20	10
101 to 500	10	5
Fewer than 101	5	5

Address: Enter the street number or other unique identifier (such as lot or unit number) of the sampling site and include the city if the water utility services multiple cities.

Tier, Category, and Structure Type: Enter the appropriate codes from the table below in the Tier, Category, and Structure Type columns to identify the selection criteria for each site.

Tier	Category	Structure Type	Description
Tier 1	A	SFR	Single Family Residence (SFR) with lead service line
	B	SFR	SFR with interior lead plumbing
	C	MFR	Multi-family Residence (MFR) if MFRs comprise at least 20% of total service connections
Tier 2	D	MFR or BLDG	MFR or other building (BLDG) with lead service line
	E	MFR or BLDG	MFR or other BLDG with interior lead plumbing
Tier 3	F	SFR	SFR with copper plumbing with lead solder installed before 1988
Other	OT	SFR, MFR, Or BLDG	If no Tier 1, 2, 3 sites, use sites representative of plumbing commonly found throughout the supply

Service Line and Interior Plumbing Material: Enter the appropriate codes from the table below in the Service Line Material and Interior Plumbing Material columns.

Material		
L	=	Lead
CLS	=	Copper with lead solder installed before July 1988
C	=	Copper installed after July 1988
G	=	Galvanized
P	=	Plastic

Site Validation Method: Enter method used to verify site information (permit records, visual inspection, etc.).

NOTE: It is **highly recommended** that the plan contains more sites than are required for standard monitoring. For example, if the standard number of required sampling sites is 10, list 5 or more additional, appropriately tiered sites that may be used as an alternate if an original site is unavailable.

MICHIGAN DEPARTMENT OF ENVIRONMENTAL QUALITY
DRINKING WATER AND MUNICIPAL ASSISTANCE DIVISION

SAMPLING PLAN – LEAD AND COPPER

Issued under authority of the Michigan Safe Drinking Water Act, 1976 PA 399, and Administrative Rules, as amended. Administrative Rule R 325.10710a requires a water supply to monitor for lead and copper according to a pool of targeted sampling sites in accordance with designated site selection criteria. Complete and submit this form to MDEQ.

Use additional pages for water supplies requiring more sampling sites.

Michigan Lead and Copper Rule
Lead and Copper Tap Sample Site Selection Criteria

Community water supplies must identify a pool of lead and copper sampling sites containing **AT LEAST** the number of sites necessary to conduct **STANDARD** monitoring (see instructions for number of required sites). It is highly recommended that the sampling pool contain more sites than required in case routine sites are unavailable at time of sampling. The sampling pool must target high risk sites using the criteria below.

- **Samples must be collected from Tier 1 sites, unless …**
- insufficient Tier 1 sampling sites are available, then **Tier 2** sites must be used, unless …
- insufficient Tier 1 and Tier 2 sampling sites are available, then **Tier 3** sites must be used.
- If no Tier 1, 2, or 3 sites are available, sampling sites must be representative of plumbing materials typically found throughout the water system.

TIER 1 SITES - Single family residences with either: o Lead service lines (LSL)***** o Interior lead plumbing Multiple family residences (MFR) with LSLs or interior lead plumbing may be used as Tier 1 sites when MFR comprise at least 20 percent of the total service connections.
TIER 2 SITES – Other buildings or multiple family residences with either: o Lead service lines***** o Interior lead plumbing
TIER 3 SITES - Single family residences with: o Copper plumbing with lead solder installed before July 1988
OTHER SITES o Sites representative of plumbing materials commonly found throughout the water supply.
*** Priority should be placed on sites with full LSLs, followed by partial LSLs, followed by lead goosenecks or pigtails.**

Also Note:

- Each round of sampling should be conducted at the **SAME** sampling sites unless …
  - a site no longer meets tiering criteria (for example, a site is no longer Tier 1 after having the lead service line replaced); or
  - a site is unavailable (for example, a site has no water service, resident refuses to participate, etc.)
- **DO NOT** sample from outside hose spigots or utility sinks.
  - For residential sites, samples **MUST BE** collected from kitchen or bathroom taps typically used for consumption. For non-residential sites, samples **MUST BE** collected from taps typically used for consumption.
- Samples **MAY NOT** be taken from taps that have point of use or point of entry treatment devices designed to remove inorganic contaminants, such as an iron removal filter, reverse osmosis system, or water softener.

Lead and Copper Sampling Pool Form Instructions

Water Supply Name, WSSN, and County: Enter your water supply information.

Standard Number of Sites Required: Enter the standard number of sites you are required to sample based on your population.

Reduced Number of Sites Required: Enter the number of sites you would be required to sample if the MDEQ reduces your monitoring.

People Served	Standard Sites	Reduced Sites
More than 100,000	100	50
10,001 to 100,000	60	30
3,301 to 10,000	40	20
501 to 3,300	20	10
101 to 500	10	5
Fewer than 101	5	5

Address: Enter the street number or other unique identifier (such as lot or unit number) of the sampling site and include the city if the water utility services multiple cities.

Tier, Category, and Structure Type: Enter the appropriate codes from the table below in the Tier, Category, and Structure Type columns to identify the selection criteria for each site.

Tier	Category	Structure Type	Description
Tier 1	A	SFR	Single Family Residence (SFR) with lead service line
	B	SFR	SFR with interior lead plumbing
	C	MFR	Multi-family Residence (MFR) if MFRs comprise at least 20% of total service connections
Tier 2	D	MFR or BLDG	MFR or other building (BLDG) with lead service line
	E	MFR or BLDG	MFR or other BLDG with interior lead plumbing
Tier 3	F	SFR	SFR with copper plumbing with lead solder installed before 1988
Other	OT	SFR, MFR, Or BLDG	If no Tier 1, 2, 3 sites, use sites representative of plumbing commonly found throughout the supply

Service Line and Interior Plumbing Material: Enter the appropriate codes from the table below in the Service Line Material and Interior Plumbing Material columns.

Material		
L	=	Lead
CLS	=	Copper with lead solder installed before July 1988
C	=	Copper installed after July 1988
G	=	Galvanized
P	=	Plastic

Site Validation Method: Enter method used to verify site information (permit records, visual inspection, etc.).

NOTE: It is **highly recommended** that the plan contains more sites than are required for standard monitoring. For example, if the standard number of required sampling sites is 10, list 5 or more additional, appropriately tiered sites that may be used as an alternate if an original site is unavailable.

MICHIGAN DEPARTMENT OF ENVIRONMENTAL QUALITY
DRINKING WATER AND MUNICIPAL ASSISTANCE DIVISION

SAMPLING PLAN – LEAD AND COPPER

Issued under authority of the Michigan Safe Drinking Water Act, 1976 PA 399, and Administrative Rules, as amended. Administrative Rule R 325.10710a requires a water supply to monitor for lead and copper according to a pool of targeted sampling sites in accordance with designated site selection criteria. Complete and submit this form to MDEQ.

DRINKING WATER AND MUNICIPAL ASSISTANCE DIVISION

SAMPLING PLAN – LEAD AND COPPER

Issued under authority of the Michigan Safe Drinking Water Act, 1976 PA 399, and Administrative Rules, as amended. Administrative Rule R 325.10710a requires a water supply to monitor for lead and copper according to a pool of targeted sampling sites in accordance with designated site selection criteria. Complete and submit this form to MDEQ.

Use additional pages for water supplies requiring more sampling sites.

Michigan Lead and Copper Rule
Lead and Copper Tap Sample Site Selection Criteria

Community water supplies must identify a pool of lead and copper sampling sites containing **AT LEAST** the number of sites necessary to conduct **STANDARD** monitoring (see instructions for number of required sites). It is highly recommended that the sampling pool contain more sites than required in case routine sites are unavailable at time of sampling. The sampling pool must target high risk sites using the criteria below.

- **Samples must be collected from Tier 1 sites, unless …**
- insufficient Tier 1 sampling sites are available, then **Tier 2** sites must be used, unless …
- insufficient Tier 1 and Tier 2 sampling sites are available, then **Tier 3** sites must be used.
- If no Tier 1, 2, or 3 sites are available, sampling sites must be representative of plumbing materials typically found throughout the water system.

TIER 1 SITES - Single family residences with either: ○ Lead service lines (LSL)* ○ Interior lead plumbing Multiple family residences (MFR) with LSLs or interior lead plumbing may be used as Tier 1 sites when MFR comprise at least 20 percent of the total service connections.
TIER 2 SITES – Other buildings or multiple family residences with either: ○ Lead service lines* ○ Interior lead plumbing
TIER 3 SITES - Single family residences with: ○ Copper plumbing with lead solder installed before July 1988
OTHER SITES ○ Sites representative of plumbing materials commonly found throughout the water supply.
*** Priority should be placed on sites with full LSLs, followed by partial LSLs, followed by lead goosenecks or pigtails.**

Also Note:

- Each round of sampling should be conducted at the **SAME** sampling sites unless …
  - a site no longer meets tiering criteria (for example, a site is no longer Tier 1 after having the lead service line replaced); or
  - a site is unavailable (for example, a site has no water service, resident refuses to participate, etc.)
- **DO NOT** sample from outside hose spigots or utility sinks.
  - For residential sites, samples **MUST BE** collected from kitchen or bathroom taps typically used for consumption. For non-residential sites, samples **MUST BE** collected from taps typically used for consumption.
- Samples **MAY NOT** be taken from taps that have point of use or point of entry treatment devices designed to remove inorganic contaminants, such as an iron removal filter, reverse osmosis system, or water softener.

Lead and Copper Sampling Pool Form Instructions

Water Supply Name, WSSN, and County: Enter your water supply information.

Standard Number of Sites Required: Enter the standard number of sites you are required to sample based on your population.

Reduced Number of Sites Required: Enter the number of sites you would be required to sample if the MDEQ reduces your monitoring.

People Served	Standard Sites	Reduced Sites
More than 100,000	100	50
10,001 to 100,000	60	30
3,301 to 10,000	40	20
501 to 3,300	20	10
101 to 500	10	5
Fewer than 101	5	5

Address: Enter the street number or other unique identifier (such as lot or unit number) of the sampling site and include the city if the water utility services multiple cities.

Tier, Category, and Structure Type: Enter the appropriate codes from the table below in the Tier, Category, and Structure Type columns to identify the selection criteria for each site.

Tier	Category	Structure Type	Description
Tier 1	A	SFR	Single Family Residence (SFR) with lead service line
	B	SFR	SFR with interior lead plumbing
	C	MFR	Multi-family Residence (MFR) if MFRs comprise at least 20% of total service connections
Tier 2	D	MFR or BLDG	MFR or other building (BLDG) with lead service line
	E	MFR or BLDG	MFR or other BLDG with interior lead plumbing
Tier 3	F	SFR	SFR with copper plumbing with lead solder installed before 1988
Other	OT	SFR, MFR, Or BLDG	If no Tier 1, 2, 3 sites, use sites representative of plumbing commonly found throughout the supply

Service Line and Interior Plumbing Material: Enter the appropriate codes from the table below in the Service Line Material and Interior Plumbing Material columns.

Material		
L	=	Lead
CLS	=	Copper with lead solder installed before July 1988
C	=	Copper installed after July 1988
G	=	Galvanized
P	=	Plastic

Site Validation Method: Enter method used to verify site information (permit records, visual inspection, etc.).

NOTE: It is **highly recommended** that the plan contains more sites than are required for standard monitoring. For example, if the standard number of required sampling sites is 10, list 5 or more additional, appropriately tiered sites that may be used as an alternate if an original site is unavailable.

Michigan Lead an49d Copper Rule
Lead and Copper Tap Sample Site Selection Criteria

Community water supplies must identify a pool of lead and copper sampling sites containing **AT LEAST** the number of sites necessary to conduct **STANDARD** monitoring (see instructions for number of required sites). It is highly recommended that the sampling pool contain more sites than required in case routine sites are unavailable at time of sampling. The sampling pool must target high risk sites using the criteria below.

- **Samples must be collected from Tier 1 sites, unless …**
- insufficient Tier 1 sampling sites are available, then **Tier 2** sites must be used, unless …
- insufficient Tier 1 and Tier 2 sampling sites are available, then **Tier 3** sites must be used.
- If no Tier 1, 2, or 3 sites are available, sampling sites must be representative of plumbing materials typically found throughout the water system.

TIER 1 SITES - Single family residences with either: o Lead service lines (LSL)***** o Interior lead plumbing Multiple family residences (MFR) with LSLs or interior lead plumbing may be used as Tier 1 sites when MFR comprise at least 20 percent of the total service connections.
TIER 2 SITES – Other buildings or multiple family residences with either: o Lead service lines***** o Interior lead plumbing
TIER 3 SITES - Single family residences with: o Copper plumbing with lead solder installed before July 1988
OTHER SITES o Sites representative of plumbing materials commonly found throughout the water supply.
*** Priority should be placed on sites with full LSLs, followed by partial LSLs, followed by lead goosenecks or pigtails.**

Also Note:

- Each round of sampling should be conducted at the **SAME** sampling sites unless …
  - a site no longer meets tiering criteria (for example, a site is no longer Tier 1 after having the lead service line replaced); or
  - a site is unavailable (for example, a site has no water service, resident refuses to participate, etc.)
- **DO NOT** sample from outside hose spigots or utility sinks.
  - For residential sites, samples **MUST BE** collected from kitchen or bathroom taps typically used for consumption. For non-residential sites, samples **MUST BE** collected from taps typically used for consumption.
- Samples **MAY NOT** be taken from taps that have point of use or point of entry treatment devices designed to remove inorganic contaminants, such as an iron removal filter, reverse osmosis system, or water softener.

Lead and Copper Sampling Pool Form Instructions

Water Supply Name, WSSN, and County: Enter your water supply information.

Standard Number of Sites Required: Enter the standard number of sites you are required to sample based on your population.

Reduced Number of Sites Required: Enter the number of sites you would be required to sample if the MDEQ reduces your monitoring.

People Served	Standard Sites	Reduced Sites
More than 100,000	100	50
10,001 to 100,000	60	30
3,301 to 10,000	40	20
501 to 3,300	20	10
101 to 500	10	5
Fewer than 101	5	5

Address: Enter the street number or other unique identifier (such as lot or unit number) of the sampling site and include the city if the water utility services multiple cities.

Tier, Category, and Structure Type: Enter the appropriate codes from the table below in the Tier, Category, and Structure Type columns to identify the selection criteria for each site.

Tier	Category	Structure Type	Description
Tier 1	A	SFR	Single Family Residence (SFR) with lead service line
	B	SFR	SFR with interior lead plumbing
	C	MFR	Multi-family Residence (MFR) if MFRs comprise at least 20% of total service connections
Tier 2	D	MFR or BLDG	MFR or other building (BLDG) with lead service line
	E	MFR or BLDG	MFR or other BLDG with interior lead plumbing
Tier 3	F	SFR	SFR with copper plumbing with lead solder installed before 1988
Other	OT	SFR, MFR, Or BLDG	If no Tier 1, 2, 3 sites, use sites representative of plumbing commonly found throughout the supply

Service Line and Interior Plumbing Material: Enter the appropriate codes from the table below in the Service Line Material and Interior Plumbing Material columns.

Material		
L	=	Lead
CLS	=	Copper with lead solder installed before July 1988
C	=	Copper installed after July 1988
G	=	Galvanized
P	=	Plastic

Site Validation Method: Enter method used to verify site information (permit records, visual inspection, etc.).

NOTE: It is **highly recommended** that the plan contains more sites than are required for standard monitoring. For example, if the standard number of required sampling sites is 10, list 5 or more additional, appropriately tiered sites that may be used as an alternate if an original site is unavailable.

MICHIGAN DEPARTMENT OF ENVIRONMENTAL QUALITY
DRINKING WATER AND MUNICIPAL ASSISTANCE DIVISION

SAMPLING PLAN – LEAD AND COPPER

Issued under authority of the Michigan Safe Drinking Water Act, 1976 PA 399, and Administrative Rules, as amended. Administrative Rule R 325.10710a requires a water supply to monitor for lead and copper according to a pool of targeted sampling sites in accordance with designated site selection criteria. Complete and submit this form to MDEQ.

Also Note:

- Each round of sampling should be conducted at the **SAME** sampling sites unless …
  - a site no longer meets tiering criteria (for example, a site is no longer Tier 1 after having the lead service line replaced); or
  - a site is unavailable (for example, a site has no water service, resident refuses to participate, etc.)
- **DO NOT** sample from outside hose spigots or utility sinks.
  - For residential sites, samples **MUST BE** collected from kitchen or bathroom taps typically used for consumption. For non-residential sites, samples **MUST BE** collected from taps typically used for consumption.
- Samples **MAY NOT** be taken from taps that have point of use or point of entry treatment devices designed to remove inorganic contaminants, such as an iron removal filter, reverse osmosis system, or water softener.

Lead and Copper Sampling Pool Form Instructions

Water Supply Name, WSSN, and County: Enter your water supply information.

Standard Number of Sites Required: Enter the standard number of sites you are required to sample based on your population.

Reduced Number of Sites Required: Enter the number of sites you would be required to sample if the MDEQ reduces your monitoring.

People Served	Standard Sites	Reduced Sites
More than 100,000	100	50
10,001 to 100,000	60	30
3,301 to 10,000	40	20
501 to 3,300	20	10
101 to 500	10	5
Fewer than 101	5	5

Address: Enter the street number or other unique identifier (such as lot or unit number) of the sampling site and include the city if the water utility services multiple cities.

Tier, Category, and Structure Type: Enter the appropriate codes from the table below in the Tier, Category, and Structure Type columns to identify the selection criteria for each site.

Tier	Category	Structure Type	Description
Tier 1	A	SFR	Single Family Residence (SFR) with lead service line
	B	SFR	SFR with interior lead plumbing
	C	MFR	Multi-family Residence (MFR) if MFRs comprise at least 20% of total service connections
Tier 2	D	MFR or BLDG	MFR or other building (BLDG) with lead service line
	E	MFR or BLDG	MFR or other BLDG with interior lead plumbing
Tier 3	F	SFR	SFR with copper plumbing with lead solder installed before 1988
Other	OT	SFR, MFR, Or BLDG	If no Tier 1, 2, 3 sites, use sites representative of plumbing commonly found throughout the supply

Service Line and Interior Plumbing Material: Enter the appropriate codes from the table below in the Service Line Material and Interior Plumbing Material columns.

Material		
L	=	Lead
CLS	=	Copper with lead solder installed before July 1988
C	=	Copper installed after July 1988
G	=	Galvanized
P	=	Plastic

Site Validation Method: Enter method used to verify site information (permit records, visual inspection, etc.).

NOTE: It is **highly recommended** that the plan contains more sites than are required for standard monitoring. For example, if the standard number of required sampling sites is 10, list 5 or more additional, appropriately tiered sites that may be used as an alternate if an original site is unavailable.

Michigan Lead and Copper Rule
Lead and Copper Tap Sample Site Selection Criteria

Community water supplies must identify a pool of lead and copper sampling sites containing **AT LEAST** the number of sites necessary to conduct **STANDARD** monitoring (see instructions for number of required sites). It is highly recommended that the sampling pool contain more sites than required in case routine sites are unavailable at time of sampling. The sampling pool must target high risk sites using the criteria below.

- **Samples must be collected from Tier 1 sites, unless …**
- insufficient Tier 1 sampling sites are available, then **Tier 2** sites must be used, unless …
- insufficient Tier 1 and Tier 2 sampling sites are available, then **Tier 3** sites must be used.
- If no Tier 1, 2, or 3 sites are available, sampling sites must be representative of plumbing materials typically found throughout the water system.

TIER 1 SITES - Single family residences with either: o Lead service lines (LSL)***** o Interior lead plumbing Multiple family residences (MFR) with LSLs or interior lead plumbing may be used as Tier 1 sites when MFR comprise at least 20 percent of the total service connections.
TIER 2 SITES – Other buildings or multiple family residences with either: o Lead service lines***** o Interior lead plumbing
TIER 3 SITES - Single family residences with: o Copper plumbing with lead solder installed before July 1988
OTHER SITES o Sites representative of plumbing materials commonly found throughout the water supply.
*** Priority should be placed on sites with full LSLs, followed by partial LSLs, followed by lead goosenecks or pigtails.**

Also Note:

- Each round of sampling should be conducted at the **SAME** sampling sites unless …
  - a site no longer meets tiering criteria (for example, a site is no longer Tier 1 after having the lead service line replaced); or
  - a site is unavailable (for example, a site has no water service, resident refuses to participate, etc.)

- **DO NOT** sample from outside hose spigots or utility sinks.
    - For residential sites, samples **MUST BE** collected from kitchen or bathroom taps typically used for consumption. For non-residential sites, samples **MUST BE** collected from taps typically used for consumption.
- Samples **MAY NOT** be taken from taps that have point of use or point of entry treatment devices designed to remove inorganic contaminants, such as an iron removal filter, reverse osmosis system, or water softener.

Lead and Copper Sampling Pool Form Instructions

Water Supply Name, WSSN, and County: Enter your water supply information.

Standard Number of Sites Required: Enter the standard number of sites you are required to sample based on your population.

Reduced Number of Sites Required: Enter the number of sites you would be required to sample if the MDEQ reduces your monitoring.

People Served	Standard Sites	Reduced Sites
More than 100,000	100	50
10,001 to 100,000	60	30
3,301 to 10,000	40	20
501 to 3,300	20	10
101 to 500	10	5
Fewer than 101	5	5

Address: Enter the street number or other unique identifier (such as lot or unit number) of the sampling site and include the city if the water utility services multiple cities.

Tier, Category, and Structure Type: Enter the appropriate codes from the table below in the Tier, Category, and Structure Type columns to identify the selection criteria for each site.

Tier	Category	Structure Type	Description
Tier 1	A	SFR	Single Family Residence (SFR) with lead service line
	B	SFR	SFR with interior lead plumbing
	C	MFR	Multi-family Residence (MFR) if MFRs comprise at least 20% of total service connections
Tier 2	D	MFR or BLDG	MFR or other building (BLDG) with lead service line
	E	MFR or BLDG	MFR or other BLDG with interior lead plumbing
Tier 3	F	SFR	SFR with copper plumbing with lead solder installed before 1988
Other	OT	SFR, MFR, Or BLDG	If no Tier 1, 2, 3 sites, use sites representative of plumbing commonly found throughout the supply

Service Line and Interior Plumbing Material: Enter the appropriate codes from the table below in the Service Line Material and Interior Plumbing Material columns.

Material		
L	=	Lead
CLS	=	Copper with lead solder installed before July 1988
C	=	Copper installed after July 1988
G	=	Galvanized
P	=	Plastic

Site Validation Method: Enter method used to verify site information (permit records, visual inspection, etc.).

NOTE: It is **highly recommended** that the plan contains more sites than are required for standard monitoring. For example, if the standard number of required sampling sites is 10, list 5 or more additional, appropriately tiered sites that may be used as an alternate if an original site is unavailable.

MICHIGAN DEPARTMENT OF ENVIRONMENTAL QUALITY
DRINKING WATER AND MUNICIPAL ASSISTANCE DIVISION

SAMPLING PLAN – LEAD AND COPPER

Issued under authority of the Michigan Safe Drinking Water Act, 1976 PA 399, and Administrative Rules, as amended. Administrative Rule R 325.10710a requires a water supply to monitor for lead and copper according to a pool of targeted sampling sites in accordance with designated site selection criteria. Complete and submit this form to MDEQ.

SAMPLING PLAN – LEAD AND COPPER

Issued under authority of the Michigan Safe Drinking Water Act, 1976 PA 399, and Administrative Rules, as amended. Administrative Rule R 325.10710a requires a water supply to monitor for lead and copper according to a pool of targeted sampling sites in accordance with designated site selection criteria. Complete and submit this form to MDEQ.

Use additional pages for water supplies requiring more sampling sites.

Michigan Lead and Copper Rule
Lead and Copper Tap Sample Site Selection Criteria

Community water supplies must identify a pool of lead and copper sampling sites containing **AT LEAST** the number of sites necessary to conduct **STANDARD** monitoring (see instructions for number of required sites). It is highly recommended that the sampling pool contain more sites than required in case routine sites are unavailable at time of sampling. The sampling pool must target high risk sites using the criteria below.

- **Samples must be collected from Tier 1 sites, unless …**
- insufficient Tier 1 sampling sites are available, then **Tier 2** sites must be used, unless …
- insufficient Tier 1 and Tier 2 sampling sites are available, then **Tier 3** sites must be used.
- If no Tier 1, 2, or 3 sites are available, sampling sites must be representative of plumbing materials typically found throughout the water system.

TIER 1 SITES - Single family residences with either: o Lead service lines (LSL)***** o Interior lead plumbing Multiple family residences (MFR) with LSLs or interior lead plumbing may be used as Tier 1 sites when MFR comprise at least 20 percent of the total service connections.
TIER 2 SITES – Other buildings or multiple family residences with either: o Lead service lines***** o Interior lead plumbing
TIER 3 SITES - Single family residences with: o Copper plumbing with lead solder installed before July 1988
OTHER SITES o Sites representative of plumbing materials commonly found throughout the water supply.
*** Priority should be placed on sites with full LSLs, followed by partial LSLs, followed by lead goosenecks or pigtails.**

Also Note:

- Each round of sampling should be conducted at the **SAME** sampling sites unless …
  - a site no longer meets tiering criteria (for example, a site is no longer Tier 1 after having the lead service line replaced); or
  - a site is unavailable (for example, a site has no water service, resident refuses to participate, etc.)
- **DO NOT** sample from outside hose spigots or utility sinks.
  - For residential sites, samples **MUST BE** collected from kitchen or bathroom taps typically used for consumption. For non-residential sites, samples **MUST BE** collected from taps typically used for consumption.
- Samples **MAY NOT** be taken from taps that have point of use or point of entry treatment devices designed to remove inorganic contaminants, such as an iron removal filter, reverse osmosis system, or water softener.

Lead and Copper Sampling Pool Form Instructions

Water Supply Name, WSSN, and County: Enter your water supply information.

Standard Number of Sites Required: Enter the standard number of sites you are required to sample based on your population.

Reduced Number of Sites Required: Enter the number of sites you would be required to sample if the MDEQ reduces your monitoring.

People Served	Standard Sites	Reduced Sites
More than 100,000	100	50
10,001 to 100,000	60	30
3,301 to 10,000	40	20
501 to 3,300	20	10
101 to 500	10	5
Fewer than 101	5	5

Address: Enter the street number or other unique identifier (such as lot or unit number) of the sampling site and include the city if the water utility services multiple cities.

Tier, Category, and Structure Type: Enter the appropriate codes from the table below in the Tier, Category, and Structure Type columns to identify the selection criteria for each site.

Tier	Category	Structure Type	Description
Tier 1	A	SFR	Single Family Residence (SFR) with lead service line
	B	SFR	SFR with interior lead plumbing
	C	MFR	Multi-family Residence (MFR) if MFRs comprise at least 20% of total service connections
Tier 2	D	MFR or BLDG	MFR or other building (BLDG) with lead service line
	E	MFR or BLDG	MFR or other BLDG with interior lead plumbing
Tier 3	F	SFR	SFR with copper plumbing with lead solder installed before 1988
Other	OT	SFR, MFR, Or BLDG	If no Tier 1, 2, 3 sites, use sites representative of plumbing commonly found throughout the supply

Service Line and Interior Plumbing Material: Enter the appropriate codes from the table below in the Service Line Material and Interior Plumbing Material columns.

Material		
L	=	Lead
CLS	=	Copper with lead solder installed before July 1988
C	=	Copper installed after July 1988
G	=	Galvanized
P	=	Plastic

Site Validation Method: Enter method used to verify site information (permit records, visual inspection, etc.).

NOTE: It is **highly recommended** that the plan contains more sites than are required for standard monitoring. For example, if the standard number of required sampling sites is 10, list 5 or more additional, appropriately tiered sites that may be used as an alternate if an original site is unavailable.

Tier	Category	Structure Type	Description
Tier 1	A	SFR	Single Family Residence (SFR) with lead service line
	B	SFR	SFR with interior lead plumbing
	C	MFR	Multi-family Residence (MFR) if MFRs comprise at least 20% of total service connections
Tier 2	D	MFR or BLDG	MFR or other building (BLDG) with lead service line
	E	MFR or BLDG	MFR or other BLDG with interior lead plumbing
Tier 3	F	SFR	SFR with copper plumbing with lead solder installed before 1988
Other	OT	SFR, MFR, Or BLDG	If no Tier 1, 2, 3 sites, use sites representative of plumbing commonly found throughout the supply

Service Line and Interior Plumbing Material: Enter the appropriate codes from the table below in the Service Line Material and Interior Plumbing Material columns.

Material		
L	=	Lead
CLS	=	Copper with lead solder installed before July 1988
C	=	Copper installed after July 1988
G	=	Galvanized
P	=	Plastic

Site Validation Method: Enter method used to verify site information (permit records, visual inspection, etc.).

NOTE: It is **highly recommended** that the plan contains more sites than are required for standard monitoring. For example, if the standard number of required sampling sites is 10, list 5 or more additional, appropriately tiered sites that may be used as an alternate if an original site is unavailable.

MICHIGAN DEPARTMENT OF ENVIRONMENTAL QUALITY
DRINKING WATER AND MUNICIPAL ASSISTANCE DIVISION

SAMPLING PLAN – LEAD AND COPPER

Issued under authority of the Michigan Safe Drinking Water Act, 1976 PA 399, and Administrative Rules, as amended. Administrative Rule R 325.10710a requires a water supply to monitor for lead and copper according to a pool of targeted sampling sites in accordance with designated site selection criteria. Complete and submit this form to MDEQ.

MICHIGAN COMMUNITY WATER SUPPLY LEAD AND COPPER TAP SAMPLING POOL (cont.)

WSSN: _____ Supply Name: _____ Page _____ of _____

Site No.	Address	Tier Level	Category	Structure Type	Service Line Material	Interior Plumbing Material	Site Validation Method
00	*Ex: 0000 Any Street – Any Town, MI*	*1*	*A*	*SFR*	*L*	*C*	*Visual*

Use additional pages for water supplies requiring more sampling sites.

Michigan Lead and Copper Rule
Lead and Copper Tap Sample Site Selection Criteria

Community water supplies must identify a pool of lead and copper sampling sites containing **AT LEAST** the number of sites necessary to conduct **STANDARD** monitoring (see instructions for number of required sites). It is highly recommended that the sampling pool contain more sites than required in case routine sites are unavailable at time of sampling. The sampling pool must target high risk sites using the criteria below.

- **Samples must be collected from Tier 1 sites, unless …**
- insufficient Tier 1 sampling sites are available, then **Tier 2** sites must be used, unless …
- insufficient Tier 1 and Tier 2 sampling sites are available, then **Tier 3** sites must be used.
- If no Tier 1, 2, or 3 sites are available, sampling sites must be representative of plumbing materials typically found throughout the water system.

TIER 1 SITES - Single family residences with either: o Lead service lines (LSL)***** o Interior lead plumbing Multiple family residences (MFR) with LSLs or interior lead plumbing may be used as Tier 1 sites when MFR comprise at least 20 percent of the total service connections.
TIER 2 SITES – Other buildings or multiple family residences with either: o Lead service lines***** o Interior lead plumbing
TIER 3 SITES - Single family residences with: o Copper plumbing with lead solder installed before July 1988
OTHER SITES o Sites representative of plumbing materials commonly found throughout the water supply.
*** Priority should be placed on sites with full LSLs, followed by partial LSLs, followed by lead goosenecks or pigtails.**

Also Note:

- Each round of sampling should be conducted at the **SAME** sampling sites unless …
  - a site no longer meets tiering criteria (for example, a site is no longer Tier 1 after having the lead service line replaced); or
  - a site is unavailable (for example, a site has no water service, resident refuses to participate, etc.)
- **DO NOT** sample from outside hose spigots or utility sinks.
  - For residential sites, samples **MUST BE** collected from kitchen or bathroom taps typically used for consumption. For non-residential sites, samples **MUST BE** collected from taps typically used for consumption.
- Samples **MAY NOT** be taken from taps that have point of use or point of entry treatment devices designed to remove inorganic contaminants, such as an iron removal filter, reverse osmosis system, or water softener.

Lead and Copper Sampling Pool Form Instructions

Water Supply Name, WSSN, and County: Enter your water supply information.

Standard Number of Sites Required: Enter the standard number of sites you are required to sample based on your population.

Reduced Number of Sites Required: Enter the number of sites you would be required to sample if the MDEQ reduces your monitoring.

People Served	Standard Sites	Reduced Sites
More than 100,000	100	50
10,001 to 100,000	60	30
3,301 to 10,000	40	20
501 to 3,300	20	10
101 to 500	10	5
Fewer than 101	5	5

Address: Enter the street number or other unique identifier (such as lot or unit number) of the sampling site and include the city if the water utility services multiple cities.

Tier, Category, and Structure Type: Enter the appropriate codes from the table below in the Tier, Category, and Structure Type columns to identify the selection criteria for each site.

Tier	Category	Structure Type	Description
Tier 1	A	SFR	Single Family Residence (SFR) with lead service line
	B	SFR	SFR with interior lead plumbing
	C	MFR	Multi-family Residence (MFR) if MFRs comprise at least 20% of total service connections
Tier 2	D	MFR or BLDG	MFR or other building (BLDG) with lead service line
	E	MFR or BLDG	MFR or other BLDG with interior lead plumbing
Tier 3	F	SFR	SFR with copper plumbing with lead solder installed before 1988
Other	OT	SFR, MFR, Or BLDG	If no Tier 1, 2, 3 sites, use sites representative of plumbing commonly found throughout the supply

Service Line and Interior Plumbing Material: Enter the appropriate codes from the table below in the Service Line Material and Interior Plumbing Material columns.

Material		
L	=	Lead
CLS	=	Copper with lead solder installed before July 1988
C	=	Copper installed after July 1988
G	=	Galvanized
P	=	Plastic

Site Validation Method: Enter method used to verify site information (permit records, visual inspection, etc.).

NOTE: It is **highly recommended** that the plan contains more sites than are required for standard monitoring. For example, if the standard number of required sampling sites is 10, list 5 or more additional, appropriately tiered sites that may be used as an alternate if an original site is unavailable.

MICHIGAN DEPARTMENT OF ENVIRONMENTAL QUALITY
DRINKING WATER AND MUNICIPAL ASSISTANCE DIVISION

SAMPLING PLAN – LEAD AND COPPER

Issued under authority of the Michigan Safe Drinking Water Act, 1976 PA 399, and Administrative Rules, as amended. Administrative Rule R 325.10710a requires a water supply to monitor for lead and copper according to a pool of targeted sampling sites in accordance with designated site selection criteria. Complete and submit this form to MDEQ.

MICHIGAN COMMUNITY WATER SUPPLY LEAD AND COPPER TAP SAMPLING POOL (cont.)

WSSN: _____ **Supply Name:** _____ **Page** _____ **of** _____

Site No.	Address	Tier Level	Category	Structure Type	Service Line Material	Interior Plumbing Material	Site Validation Method
00	*Ex: 0000 Any Street – Any Town, MI*	*1*	*A*	*SFR*	*L*	*C*	*Visual*

Use additional pages for water supplies requiring more sampling sites.

Michigan Lead and Copper Rule
Lead and Copper Tap Sample Site Selection Criteria

Community water supplies must identify a pool of lead and copper sampling sites containing **AT LEAST** the number of sites necessary to conduct **STANDARD** monitoring (see instructions for number of required sites). It is highly recommended that the sampling pool contain more sites than required in case routine sites are unavailable at time of sampling. The sampling pool must target high risk sites using the criteria below.

- **Samples must be collected from Tier 1 sites, unless …**
- insufficient Tier 1 sampling sites are available, then **Tier 2** sites must be used, unless …
- insufficient Tier 1 and Tier 2 sampling sites are available, then **Tier 3** sites must be used.
- If no Tier 1, 2, or 3 sites are available, sampling sites must be representative of plumbing materials typically found throughout the water system.

TIER 1 SITES - Single family residences with either: ○ Lead service lines (LSL)* ○ Interior lead plumbing Multiple family residences (MFR) with LSLs or interior lead plumbing may be used as Tier 1 sites when MFR comprise at least 20 percent of the total service connections.
TIER 2 SITES – Other buildings or multiple family residences with either: ○ Lead service lines* ○ Interior lead plumbing
TIER 3 SITES - Single family residences with: ○ Copper plumbing with lead solder installed before July 1988
OTHER SITES ○ Sites representative of plumbing materials commonly found throughout the water supply.
*** Priority should be placed on sites with full LSLs, followed by partial LSLs, followed by lead goosenecks or pigtails.**

Also Note:

- Each round of sampling should be conducted at the **SAME** sampling sites unless …
  - a site no longer meets tiering criteria (for example, a site is no longer Tier 1 after having the lead service line replaced); or
  - a site is unavailable (for example, a site has no water service, resident refuses to participate, etc.)
- **DO NOT** sample from outside hose spigots or utility sinks.
  - For residential sites, samples **MUST BE** collected from kitchen or bathroom taps typically used for consumption. For non-residential sites, samples **MUST BE** collected from taps typically used for consumption.
- Samples **MAY NOT** be taken from taps that have point of use or point of entry treatment devices designed to remove inorganic contaminants, such as an iron removal filter, reverse osmosis system, or water softener.

Lead and Copper Sampling Pool Form Instructions

Water Supply Name, WSSN, and County: Enter your water supply information.

Standard Number of Sites Required: Enter the standard number of sites you are required to sample based on your population.

Reduced Number of Sites Required: Enter the number of sites you would be required to sample if the MDEQ reduces your monitoring.

People Served	Standard Sites	Reduced Sites
More than 100,000	100	50
10,001 to 100,000	60	30
3,301 to 10,000	40	20
501 to 3,300	20	10
101 to 500	10	5
Fewer than 101	5	5

Address: Enter the street number or other unique identifier (such as lot or unit number) of the sampling site and include the city if the water utility services multiple cities.

Tier, Category, and Structure Type: Enter the appropriate codes from the table below in the Tier, Category, and Structure Type columns to identify the selection criteria for each site.

Tier	Category	Structure Type	Description
Tier 1	A	SFR	Single Family Residence (SFR) with lead service line
	B	SFR	SFR with interior lead plumbing
	C	MFR	Multi-family Residence (MFR) if MFRs comprise at least 20% of total service connections
Tier 2	D	MFR or BLDG	MFR or other building (BLDG) with lead service line
	E	MFR or BLDG	MFR or other BLDG with interior lead plumbing
Tier 3	F	SFR	SFR with copper plumbing with lead solder installed before 1988
Other	OT	SFR, MFR, Or BLDG	If no Tier 1, 2, 3 sites, use sites representative of plumbing commonly found throughout the supply

Service Line and Interior Plumbing Material: Enter the appropriate codes from the table below in the Service Line Material and Interior Plumbing Material columns.

Material		
L	=	Lead
CLS	=	Copper with lead solder installed before July 1988
C	=	Copper installed after July 1988
G	=	Galvanized
P	=	Plastic

Site Validation Method: Enter method used to verify site information (permit records, visual inspection, etc.).

NOTE: It is **highly recommended** that the plan contains more sites than are required for standard monitoring. For example, if the standard number of required sampling sites is 10, list 5 or more additional, appropriately tiered sites that may be used as an alternate if an original site is unavailable.

MICHIGAN DEPARTMENT OF ENVIRONMENTAL QUALITY
DRINKING WATER AND MUNICIPAL ASSISTANCE DIVISION

SAMPLING PLAN – LEAD AND COPPER

Issued under authority of the Michigan Safe Drinking Water Act, 1976 PA 399, and Administrative Rules, as amended. Administrative Rule R 325.10710a requires a water supply to monitor for lead and copper according to a pool of targeted sampling sites in accordance with designated site selection criteria. Complete and submit this form to MDEQ.

Michigan Lead and Copper Rule
Lead and Copper Tap Sample Site Selection Criteria

Community water supplies must identify a pool of lead and copper sampling sites containing **AT LEAST** the number of sites necessary to conduct **STANDARD** monitoring (see instructions for number of required sites). It is highly recommended that the sampling pool contain more sites than required in case routine sites are unavailable at time of sampling. The sampling pool must target high risk sites using the criteria below.

- **Samples must be collected from Tier 1 sites, unless …**
- insufficient Tier 1 sampling sites are available, then **Tier 2** sites must be used, unless …
- insufficient Tier 1 and Tier 2 sampling sites are available, then **Tier 3** sites must be used.
- If no Tier 1, 2, or 3 sites are available, sampling sites must be representative of plumbing materials typically found throughout the water system.

TIER 1 SITES - Single family residences with either: o Lead service lines (LSL)***** o Interior lead plumbing Multiple family residences (MFR) with LSLs or interior lead plumbing may be used as Tier 1 sites when MFR comprise at least 20 percent of the total service connections.
TIER 2 SITES – Other buildings or multiple family residences with either: o Lead service lines***** o Interior lead plumbing
TIER 3 SITES - Single family residences with: o Copper plumbing with lead solder installed before July 1988
OTHER SITES o Sites representative of plumbing materials commonly found throughout the water supply.
*** Priority should be placed on sites with full LSLs, followed by partial LSLs, followed by lead goosenecks or pigtails.**

Also Note:

- Each round of sampling should be conducted at the **SAME** sampling sites unless …
  - a site no longer meets tiering criteria (for example, a site is no longer Tier 1 after having the lead service line replaced); or
  - a site is unavailable (for example, a site has no water service, resident refuses to participate, etc.)
- **DO NOT** sample from outside hose spigots or utility sinks.
  - For residential sites, samples **MUST BE** collected from kitchen or bathroom taps typically used for consumption. For non-residential sites, samples **MUST BE** collected from taps typically used for consumption.
- Samples **MAY NOT** be taken from taps that have point of use or point of entry treatment devices designed to remove inorganic contaminants, such as an iron removal filter, reverse osmosis system, or water softener.

Lead and Copper Sampling Pool Form Instructions

Water Supply Name, WSSN, and County: Enter your water supply information.

Standard Number of Sites Required: Enter the standard number of sites you are required to sample based on your population.

Reduced Number of Sites Required: Enter the number of sites you would be required to sample if the MDEQ reduces your monitoring.

People Served	Standard Sites	Reduced Sites
More than 100,000	100	50
10,001 to 100,000	60	30
3,301 to 10,000	40	20
501 to 3,300	20	10
101 to 500	10	5
Fewer than 101	5	5

Address: Enter the street number or other unique identifier (such as lot or unit number) of the sampling site and include the city if the water utility services multiple cities.

Tier, Category, and Structure Type: Enter the appropriate codes from the table below in the Tier, Category, and Structure Type columns to identify the selection criteria for each site.

Tier	Category	Structure Type	Description
Tier 1	A	SFR	Single Family Residence (SFR) with lead service line
	B	SFR	SFR with interior lead plumbing
	C	MFR	Multi-family Residence (MFR) if MFRs comprise at least 20% of total service connections
Tier 2	D	MFR or BLDG	MFR or other building (BLDG) with lead service line
	E	MFR or BLDG	MFR or other BLDG with interior lead plumbing
Tier 3	F	SFR	SFR with copper plumbing with lead solder installed before 1988
Other	OT	SFR, MFR, Or BLDG	If no Tier 1, 2, 3 sites, use sites representative of plumbing commonly found throughout the supply

Service Line and Interior Plumbing Material: Enter the appropriate codes from the table below in the Service Line Material and Interior Plumbing Material columns.

Material		
L	=	Lead
CLS	=	Copper with lead solder installed before July 1988
C	=	Copper installed after July 1988
G	=	Galvanized
P	=	Plastic

Site Validation Method: Enter method used to verify site information (permit records, visual inspection, etc.).

NOTE: It is **highly recommended** that the plan contains more sites than are required for standard monitoring. For example, if the standard number of required sampling sites is 10, list 5 or more additional, appropriately tiered sites that may be used as an alternate if an original site is unavailable.

MICHIGAN COMMUNITY WATER SUPPLY LEAD AND COPPER TAP SAMPLING POOL (cont.)

WSSN: _____ **Supply Name:** _____ **Page** _____ **of** _____

Site No.	Address	Tier Level	Category	Structure Type	Service Line Material	Interior Plumbing Material	Site Validation Method
00	*Ex: 0000 Any Street – Any Town, MI*	*1*	*A*	*SFR*	*L*	*C*	*Visual*

Use additional pages for water supplies requiring more sampling sites.

Michigan Lead and Copper Rule
Lead and Copper Tap Sample Site Selection Criteria

Community water supplies must identify a pool of lead and copper sampling sites containing **AT LEAST** the number of sites necessary to conduct **STANDARD** monitoring (see instructions for number of required sites). It is highly recommended that the sampling pool contain more sites than required in case routine sites are unavailable at time of sampling. The sampling pool must target high risk sites using the criteria below.

- **Samples must be collected from Tier 1 sites, unless …**
- insufficient Tier 1 sampling sites are available, then **Tier 2** sites must be used, unless …
- insufficient Tier 1 and Tier 2 sampling sites are available, then **Tier 3** sites must be used.
- If no Tier 1, 2, or 3 sites are available, sampling sites must be representative of plumbing materials typically found throughout the water system.

TIER 1 SITES - Single family residences with either: o Lead service lines (LSL)* o Interior lead plumbing Multiple family residences (MFR) with LSLs or interior lead plumbing may be used as Tier 1 sites when MFR comprise at least 20 percent of the total service connections.
TIER 2 SITES – Other buildings or multiple family residences with either: o Lead service lines* o Interior lead plumbing
TIER 3 SITES - Single family residences with: o Copper plumbing with lead solder installed before July 1988
OTHER SITES o Sites representative of plumbing materials commonly found throughout the water supply.
*** Priority should be placed on sites with full LSLs, followed by partial LSLs, followed by lead goosenecks or pigtails.**

Also Note:

- Each round of sampling should be conducted at the **SAME** sampling sites unless …
  - a site no longer meets tiering criteria (for example, a site is no longer Tier 1 after having the lead service line replaced); or
  - a site is unavailable (for example, a site has no water service, resident refuses to participate, etc.)
- **DO NOT** sample from outside hose spigots or utility sinks.
  - For residential sites, samples **MUST BE** collected from kitchen or bathroom taps typically used for consumption. For non-residential sites, samples **MUST BE** collected from taps typically used for consumption.
- Samples **MAY NOT** be taken from taps that have point of use or point of entry treatment devices designed to remove inorganic contaminants, such as an iron removal filter, reverse osmosis system, or water softener.

Lead and Copper Sampling Pool Form Instructions

Water Supply Name, WSSN, and County: Enter your water supply information.

Standard Number of Sites Required: Enter the standard number of sites you are required to sample based on your population.

Reduced Number of Sites Required: Enter the number of sites you would be required to sample if the MDEQ reduces your monitoring.

People Served	Standard Sites	Reduced Sites
More than 100,000	100	50
10,001 to 100,000	60	30
3,301 to 10,000	40	20
501 to 3,300	20	10
101 to 500	10	5
Fewer than 101	5	5

Address: Enter the street number or other unique identifier (such as lot or unit number) of the sampling site and include the city if the water utility services multiple cities.

Tier, Category, and Structure Type: Enter the appropriate codes from the table below in the Tier, Category, and Structure Type columns to identify the selection criteria for each site.

Tier	Category	Structure Type	Description
Tier 1	A	SFR	Single Family Residence (SFR) with lead service line
	B	SFR	SFR with interior lead plumbing
	C	MFR	Multi-family Residence (MFR) if MFRs comprise at least 20% of total service connections
Tier 2	D	MFR or BLDG	MFR or other building (BLDG) with lead service line
	E	MFR or BLDG	MFR or other BLDG with interior lead plumbing
Tier 3	F	SFR	SFR with copper plumbing with lead solder installed before 1988
Other	OT	SFR, MFR, Or BLDG	If no Tier 1, 2, 3 sites, use sites representative of plumbing commonly found throughout the supply

Service Line and Interior Plumbing Material: Enter the appropriate codes from the table below in the Service Line Material and Interior Plumbing Material columns.

Material		
L	=	Lead
CLS	=	Copper with lead solder installed before July 1988
C	=	Copper installed after July 1988
G	=	Galvanized
P	=	Plastic

Site Validation Method: Enter method used to verify site information (permit records, visual inspection, etc.).

NOTE: It is **highly recommended** that the plan contains more sites than are required for standard monitoring. For example, if the standard number of required sampling sites is 10, list 5 or more additional, appropriately tiered sites that may be used as an alternate if an original site is unavailable.

Michigan Lead and Copper Rule
Lead and Copper Tap Sample Site Selection Criteria

Community water supplies must identify a pool of lead and copper sampling sites containing **AT LEAST** the number of sites necessary to conduct **STANDARD** monitoring (see instructions for number of required sites). It is highly recommended that the sampling pool contain more sites than required in case routine sites are unavailable at time of sampling. The sampling pool must target high risk sites using the criteria below.

- **Samples must be collected from Tier 1 sites, unless …**
- insufficient Tier 1 sampling sites are available, then **Tier 2** sites must be used, unless …
- insufficient Tier 1 and Tier 2 sampling sites are available, then **Tier 3** sites must be used.
- If no Tier 1, 2, or 3 sites are available, sampling sites must be representative of plumbing materials typically found throughout the water system.

TIER 1 SITES - Single family residences with either: ○ Lead service lines (LSL)* ○ Interior lead plumbing Multiple family residences (MFR) with LSLs or interior lead plumbing may be used as Tier 1 sites when MFR comprise at least 20 percent of the total service connections.
TIER 2 SITES – Other buildings or multiple family residences with either: ○ Lead service lines* ○ Interior lead plumbing
TIER 3 SITES - Single family residences with: ○ Copper plumbing with lead solder installed before July 1988
OTHER SITES ○ Sites representative of plumbing materials commonly found throughout the water supply.
*** Priority should be placed on sites with full LSLs, followed by partial LSLs, followed by lead goosenecks or pigtails.**

Also Note:

- Each round of sampling should be conducted at the **SAME** sampling sites unless …
  - a site no longer meets tiering criteria (for example, a site is no longer Tier 1 after having the lead service line replaced); or
  - a site is unavailable (for example, a site has no water service, resident refuses to participate, etc.)
- **DO NOT** sample from outside hose spigots or utility sinks.
  - For residential sites, samples **MUST BE** collected from kitchen or bathroom taps typically used for consumption. For non-residential sites, samples **MUST BE** collected from taps typically used for consumption.
- Samples **MAY NOT** be taken from taps that have point of use or point of entry treatment devices designed to remove inorganic contaminants, such as an iron removal filter, reverse osmosis system, or water softener.

Lead and Copper Sampling Pool Form Instructions

Water Supply Name, WSSN, and County: Enter your water supply information.

Standard Number of Sites Required: Enter the standard number of sites you are required to sample based on your population.

Reduced Number of Sites Required: Enter the number of sites you would be required to sample if the MDEQ reduces your monitoring.

People Served	Standard Sites	Reduced Sites
More than 100,000	100	50
10,001 to 100,000	60	30
3,301 to 10,000	40	20
501 to 3,300	20	10
101 to 500	10	5
Fewer than 101	5	5

Address: Enter the street number or other unique identifier (such as lot or unit number) of the sampling site and include the city if the water utility services multiple cities.

Tier, Category, and Structure Type: Enter the appropriate codes from the table below in the Tier, Category, and Structure Type columns to identify the selection criteria for each site.

Tier	Category	Structure Type	Description
Tier 1	A	SFR	Single Family Residence (SFR) with lead service line
	B	SFR	SFR with interior lead plumbing
	C	MFR	Multi-family Residence (MFR) if MFRs comprise at least 20% of total service connections
Tier 2	D	MFR or BLDG	MFR or other building (BLDG) with lead service line
	E	MFR or BLDG	MFR or other BLDG with interior lead plumbing
Tier 3	F	SFR	SFR with copper plumbing with lead solder installed before 1988
Other	OT	SFR, MFR, Or BLDG	If no Tier 1, 2, 3 sites, use sites representative of plumbing commonly found throughout the supply

Service Line and Interior Plumbing Material: Enter the appropriate codes from the table below in the Service Line Material and Interior Plumbing Material columns.

Material		
L	=	Lead
CLS	=	Copper with lead solder installed before July 1988
C	=	Copper installed after July 1988
G	=	Galvanized
P	=	Plastic

RECEIVED
Sept 03 2020
EGLE-DWEHD-CWSS-LCU

Site Validation Method: Enter method used to verify site information (permit records, visual inspection, etc.).

NOTE: It is **highly recommended** that the plan contains more sites than are required for standard monitoring. For example, if the standard number of required sampling sites is 10, list 5 or more additional, appropriately tiered sites that may be used as an alternate if an original site is unavailable.

MICHIGAN DEPARTMENT OF ENVIRONMENTAL QUALITY
DRINKING WATER AND MUNICIPAL ASSISTANCE DIVISION

SAMPLING PLAN – LEAD AND COPPER

Issued under authority of the Michigan Safe Drinking Water Act, 1976 PA 399, and Administrative Rules, as amended. Administrative Rule R 325.10710a requires a water supply to monitor for lead and copper according to a pool of targeted sampling sites in accordance with designated site selection criteria. Complete and submit this form to MDEQ.

Michigan Lead and Copper Rule
Lead and Copper Tap Sample Site Selection Criteria

Community water supplies must identify a pool of lead and copper sampling sites containing **AT LEAST** the number of sites necessary to conduct **STANDARD** monitoring (see instructions for number of required sites). It is highly recommended that the sampling pool contain more sites than required in case routine sites are unavailable at time of sampling. The sampling pool must target high risk sites using the criteria below.

- **Samples must be collected from Tier 1 sites, unless …**
- insufficient Tier 1 sampling sites are available, then **Tier 2** sites must be used, unless …
- insufficient Tier 1 and Tier 2 sampling sites are available, then **Tier 3** sites must be used.
- If no Tier 1, 2, or 3 sites are available, sampling sites must be representative of plumbing materials typically found throughout the water system.

TIER 1 SITES - Single family residences with either: o Lead service lines (LSL)* o Interior lead plumbing Multiple family residences (MFR) with LSLs or interior lead plumbing may be used as Tier 1 sites when MFR comprise at least 20 percent of the total service connections.
TIER 2 SITES – Other buildings or multiple family residences with either: o Lead service lines* o Interior lead plumbing
TIER 3 SITES - Single family residences with: o Copper plumbing with lead solder installed before July 1988
OTHER SITES o Sites representative of plumbing materials commonly found throughout the water supply.
*** Priority should be placed on sites with full LSLs, followed by partial LSLs, followed by lead goosenecks or pigtails.**

Also Note:

- Each round of sampling should be conducted at the **SAME** sampling sites unless …
  - a site no longer meets tiering criteria (for example, a site is no longer Tier 1 after having the lead service line replaced); or
  - a site is unavailable (for example, a site has no water service, resident refuses to participate, etc.)
- **DO NOT** sample from outside hose spigots or utility sinks.
  - For residential sites, samples **MUST BE** collected from kitchen or bathroom taps typically used for consumption. For non-residential sites, samples **MUST BE** collected from taps typically used for consumption.
- Samples **MAY NOT** be taken from taps that have point of use or point of entry treatment devices designed to remove inorganic contaminants, such as an iron removal filter, reverse osmosis system, or water softener.

Lead and Copper Sampling Pool Form Instructions

Water Supply Name, WSSN, and County: Enter your water supply information.

Standard Number of Sites Required: Enter the standard number of sites you are required to sample based on your population.

Reduced Number of Sites Required: Enter the number of sites you would be required to sample if the MDEQ reduces your monitoring.

People Served	Standard Sites	Reduced Sites
More than 100,000	100	50
10,001 to 100,000	60	30
3,301 to 10,000	40	20
501 to 3,300	20	10
101 to 500	10	5
Fewer than 101	5	5

Address: Enter the street number or other unique identifier (such as lot or unit number) of the sampling site and include the city if the water utility services multiple cities.

Tier, Category, and Structure Type: Enter the appropriate codes from the table below in the Tier, Category, and Structure Type columns to identify the selection criteria for each site.

Tier	Category	Structure Type	Description
Tier 1	A	SFR	Single Family Residence (SFR) with lead service line
	B	SFR	SFR with interior lead plumbing
	C	MFR	Multi-family Residence (MFR) if MFRs comprise at least 20% of total service connections
Tier 2	D	MFR or BLDG	MFR or other building (BLDG) with lead service line
	E	MFR or BLDG	MFR or other BLDG with interior lead plumbing
Tier 3	F	SFR	SFR with copper plumbing with lead solder installed before 1988
Other	OT	SFR, MFR, Or BLDG	If no Tier 1, 2, 3 sites, use sites representative of plumbing commonly found throughout the supply

Service Line and Interior Plumbing Material: Enter the appropriate codes from the table below in the Service Line Material and Interior Plumbing Material columns.

Material		
L	=	Lead
CLS	=	Copper with lead solder installed before July 1988
C	=	Copper installed after July 1988
G	=	Galvanized
P	=	Plastic

Site Validation Method: Enter method used to verify site information (permit records, visual inspection, etc.).

NOTE: It is **highly recommended** that the plan contains more sites than are required for standard monitoring. For example, if the standard number of required sampling sites is 10, list 5 or more additional, appropriately tiered sites that may be used as an alternate if an original site is unavailable.

MICHIGAN DEPARTMENT OF ENVIRONMENTAL QUALITY
DRINKING WATER AND MUNICIPAL ASSISTANCE DIVISION

SAMPLING PLAN – LEAD AND COPPER

Issued under authority of the Michigan Safe Drinking Water Act, 1976 PA 399, and Administrative Rules, as amended. Administrative Rule R 325.10710a requires a water supply to monitor for lead and copper according to a pool of targeted sampling sites in accordance with designated site selection criteria. Complete and submit this form to MDEQ.

	***See attached spreadsheet for additional sites**						
	***Sites with unknown in-home plumbing would be verified if they become a sampling site**						
	***491 Central and 332 S Marshall were sampled in 2019 but not included in this plan because their service lines were replaced.**						

Use additional pages for water supplies requiring more sampling sites.

SAMPLING PLAN – LEAD AND COPPER

Issued under authority of the Michigan Safe Drinking Water Act, 1976 PA 399, and Administrative Rules, as amended. Administrative Rule R 325.10710a requires a water supply to monitor for lead and copper according to a pool of targeted sampling sites in accordance with designated site selection criteria. Complete and submit this form to MDEQ.

Michigan Lead and Copper Rule
Lead and Copper Tap Sample Site Selection Criteria

Community water supplies must identify a pool of lead and copper sampling sites containing **AT LEAST** the number of sites necessary to conduct **STANDARD** monitoring (see instructions for number of required sites). It is highly recommended that the sampling pool contain more sites than required in case routine sites are unavailable at time of sampling. The sampling pool must target high risk sites using the criteria below.

- **Samples must be collected from Tier 1 sites, unless …**
- insufficient Tier 1 sampling sites are available, then **Tier 2** sites must be used, unless …
- insufficient Tier 1 and Tier 2 sampling sites are available, then **Tier 3** sites must be used.
- If no Tier 1, 2, or 3 sites are available, sampling sites must be representative of plumbing materials typically found throughout the water system.

TIER 1 SITES - Single family residences with either: o Lead service lines (LSL)* o Interior lead plumbing Multiple family residences (MFR) with LSLs or interior lead plumbing may be used as Tier 1 sites when MFR comprise at least 20 percent of the total service connections.
TIER 2 SITES – Other buildings or multiple family residences with either: o Lead service lines* o Interior lead plumbing
TIER 3 SITES - Single family residences with: o Copper plumbing with lead solder installed before July 1988
OTHER SITES o Sites representative of plumbing materials commonly found throughout the water supply.
*** Priority should be placed on sites with full LSLs, followed by partial LSLs, followed by lead goosenecks or pigtails.**

Also Note:

- Each round of sampling should be conducted at the **SAME** sampling sites unless …
  - a site no longer meets tiering criteria (for example, a site is no longer Tier 1 after having the lead service line replaced); or
  - a site is unavailable (for example, a site has no water service, resident refuses to participate, etc.)
- **DO NOT** sample from outside hose spigots or utility sinks.
  - For residential sites, samples **MUST BE** collected from kitchen or bathroom taps typically used for consumption. For non-residential sites, samples **MUST BE** collected from taps typically used for consumption.
- Samples **MAY NOT** be taken from taps that have point of use or point of entry treatment devices designed to remove inorganic contaminants, such as an iron removal filter, reverse osmosis

system, or water softener.

Lead and Copper Sampling Pool Form Instructions

Water Supply Name, WSSN, and County: Enter your water supply information.

Standard Number of Sites Required: Enter the standard number of sites you are required to sample based on your population.

Reduced Number of Sites Required: Enter the number of sites you would be required to sample if the MDEQ reduces your monitoring.

People Served	Standard Sites	Reduced Sites
More than 100,000	100	50
10,001 to 100,000	60	30
3,301 to 10,000	40	20
501 to 3,300	20	10
101 to 500	10	5
Fewer than 101	5	5

Address: Enter the street number or other unique identifier (such as lot or unit number) of the sampling site and include the city if the water utility services multiple cities.

Tier, Category, and Structure Type: Enter the appropriate codes from the table below in the Tier, Category, and Structure Type columns to identify the selection criteria for each site.

Tier	Category	Structure Type	Description
Tier 1	A	SFR	Single Family Residence (SFR) with lead service line
	B	SFR	SFR with interior lead plumbing
	C	MFR	Multi-family Residence (MFR) if MFRs comprise at least 20% of total service connections
Tier 2	D	MFR or BLDG	MFR or other building (BLDG) with lead service line
	E	MFR or BLDG	MFR or other BLDG with interior lead plumbing
Tier 3	F	SFR	SFR with copper plumbing with lead solder installed before 1988
Other	OT	SFR, MFR, Or BLDG	If no Tier 1, 2, 3 sites, use sites representative of plumbing commonly found throughout the supply

Service Line and Interior Plumbing Material: Enter the appropriate codes from the table below in the Service Line Material and Interior Plumbing Material columns.

Material		
L	=	Lead
CLS	=	Copper with lead solder installed before July 1988
C	=	Copper installed after July 1988
G	=	Galvanized
P	=	Plastic

RECEIVED
Dec 17 2020
EGLE-DWEHD-CWSS-LCU

Site Validation Method: Enter method used to verify site information (permit records, visual inspection, etc.).

NOTE: It is **highly recommended** that the plan contains more sites than are required for standard monitoring. For example, if the standard number of required sampling sites is 10, list 5 or more additional, appropriately tiered sites that may be used as an alternate if an original site is unavailable.

  - a site no longer meets tiering criteria (for example, a site is no longer Tier 1 after having the lead service line replaced); or
  - a site is unavailable (for example, a site has no water service, resident refuses to participate, etc.)
- **DO NOT** sample from outside hose spigots or utility sinks.
  - For residential sites, samples **MUST BE** collected from kitchen or bathroom taps typically used for consumption. For non-residential sites, samples **MUST BE** collected from taps typically used for consumption.
- Samples **MAY NOT** be taken from taps that have point of use or point of entry treatment devices designed to remove inorganic contaminants, such as an iron removal filter, reverse osmosis system, or water softener.

Lead and Copper Sampling Pool Form Instructions

Water Supply Name, WSSN, and County: Enter your water supply information.

Standard Number of Sites Required: Enter the standard number of sites you are required to sample based on your population.

Reduced Number of Sites Required: Enter the number of sites you would be required to sample if the MDEQ reduces your monitoring.

People Served	Standard Sites	Reduced Sites
More than 100,000	100	50
10,001 to 100,000	60	30
3,301 to 10,000	40	20
501 to 3,300	20	10
101 to 500	10	5
Fewer than 101	5	5

Address: Enter the street number or other unique identifier (such as lot or unit number) of the sampling site and include the city if the water utility services multiple cities.

Tier, Category, and Structure Type: Enter the appropriate codes from the table below in the Tier, Category, and Structure Type columns to identify the selection criteria for each site.

Tier	Category	Structure Type	Description
Tier 1	A	SFR	Single Family Residence (SFR) with lead service line
	B	SFR	SFR with interior lead plumbing
	C	MFR	Multi-family Residence (MFR) if MFRs comprise at least 20% of total service connections
Tier 2	D	MFR or BLDG	MFR or other building (BLDG) with lead service line
	E	MFR or BLDG	MFR or other BLDG with interior lead plumbing
Tier 3	F	SFR	SFR with copper plumbing with lead solder installed before 1988
Other	OT	SFR, MFR, Or BLDG	If no Tier 1, 2, 3 sites, use sites representative of plumbing commonly found throughout the supply

Service Line and Interior Plumbing Material: Enter the appropriate codes from the table below in the Service Line Material and Interior Plumbing Material columns.

Material		
L	=	Lead
CLS	=	Copper with lead solder installed before July 1988
C	=	Copper installed after July 1988
G	=	Galvanized
P	=	Plastic

Site Validation Method: Enter method used to verify site information (permit records, visual inspection, etc.).

NOTE: It is **highly recommended** that the plan contains more sites than are required for standard monitoring. For example, if the standard number of required sampling sites is 10, list 5 or more additional, appropriately tiered sites that may be used as an alternate if an original site is unavailable.

Use additional pages for water supplies requiring more sampling sites.

Michigan Lead and Copper Rule
Lead and Copper Tap Sample Site Selection Criteria

Community water supplies must identify a pool of lead and copper sampling sites containing **AT LEAST** the number of sites necessary to conduct **STANDARD** monitoring (see instructions for number of required sites). It is highly recommended that the sampling pool contain more sites than required in case routine sites are unavailable at time of sampling. The sampling pool must target high risk sites using the criteria below.

- **Samples must be collected from Tier 1 sites, unless …**
- insufficient Tier 1 sampling sites are available, then **Tier 2** sites must be used, unless …
- insufficient Tier 1 and Tier 2 sampling sites are available, then **Tier 3** sites must be used.
- If no Tier 1, 2, or 3 sites are available, sampling sites must be representative of plumbing materials typically found throughout the water system.

TIER 1 SITES - Single family residences with either: o Lead service lines (LSL)***** o Interior lead plumbing Multiple family residences (MFR) with LSLs or interior lead plumbing may be used as Tier 1 sites when MFR comprise at least 20 percent of the total service connections.
TIER 2 SITES – Other buildings or multiple family residences with either: o Lead service lines***** o Interior lead plumbing
TIER 3 SITES - Single family residences with: o Copper plumbing with lead solder installed before July 1988
OTHER SITES o Sites representative of plumbing materials commonly found throughout the water supply.
*** Priority should be placed on sites with full LSLs, followed by partial LSLs, followed by lead goosenecks or pigtails.**

Also Note:

- Each round of sampling should be conducted at the **SAME** sampling sites unless …
  - a site no longer meets tiering criteria (for example, a site is no longer Tier 1 after having the lead service line replaced); or
  - a site is unavailable (for example, a site has no water service, resident refuses to participate, etc.)
- **DO NOT** sample from outside hose spigots or utility sinks.
  - For residential sites, samples **MUST BE** collected from kitchen or bathroom taps typically used for consumption. For non-residential sites, samples **MUST BE** collected from taps typically used for consumption.
- Samples **MAY NOT** be taken from taps that have point of use or point of entry treatment devices designed to remove inorganic contaminants, such as an iron removal filter, reverse osmosis system, or water softener.

Lead and Copper Sampling Pool Form Instructions

Water Supply Name, WSSN, and County: Enter your water supply information.

Standard Number of Sites Required: Enter the standard number of sites you are required to sample based on your population.

Reduced Number of Sites Required: Enter the number of sites you would be required to sample if the MDEQ reduces your monitoring.

People Served	Standard Sites	Reduced Sites
More than 100,000	100	50
10,001 to 100,000	60	30
3,301 to 10,000	40	20
501 to 3,300	20	10
101 to 500	10	5
Fewer than 101	5	5

Address: Enter the street number or other unique identifier (such as lot or unit number) of the sampling site and include the city if the water utility services multiple cities.

Tier, Category, and Structure Type: Enter the appropriate codes from the table below in the Tier, Category, and Structure Type columns to identify the selection criteria for each site.

Tier	Category	Structure Type	Description
Tier 1	A	SFR	Single Family Residence (SFR) with lead service line
	B	SFR	SFR with interior lead plumbing
	C	MFR	Multi-family Residence (MFR) if MFRs comprise at least 20% of total service connections
Tier 2	D	MFR or BLDG	MFR or other building (BLDG) with lead service line
	E	MFR or BLDG	MFR or other BLDG with interior lead plumbing
Tier 3	F	SFR	SFR with copper plumbing with lead solder installed before 1988
Other	OT	SFR, MFR, Or BLDG	If no Tier 1, 2, 3 sites, use sites representative of plumbing commonly found throughout the supply

Service Line and Interior Plumbing Material: Enter the appropriate codes from the table below in the Service Line Material and Interior Plumbing Material columns.

Material		
L	=	Lead
CLS	=	Copper with lead solder installed before July 1988
C	=	Copper installed after July 1988
G	=	Galvanized
P	=	Plastic

Site Validation Method: Enter method used to verify site information (permit records, visual inspection, etc.).

NOTE: It is **highly recommended** that the plan contains more sites than are required for standard monitoring. For example, if the standard number of required sampling sites is 10, list 5 or more additional, appropriately tiered sites that may be used as an alternate if an original site is unavailable.

SAMPLING PLAN – LEAD AND COPPER

Issued under authority of the Michigan Safe Drinking Water Act, 1976 PA 399, and Administrative Rules, as amended. Administrative Rule R 325.10710a requires a water supply to monitor for lead and copper according to a pool of targeted sampling sites in accordance with designated site selection criteria. Complete and submit this form to MDEQ.

Michigan Lead and Copper Rule
Lead and Copper Tap Sample Site Selection Criteria

Community water supplies must identify a pool of lead and copper sampling sites containing **AT LEAST** the number of sites necessary to conduct **STANDARD** monitoring (see instructions for number of required sites). It is highly recommended that the sampling pool contain more sites than required in case routine sites are unavailable at time of sampling. The sampling pool must target high risk sites using the criteria below.

- **Samples must be collected from Tier 1 sites, unless …**
- insufficient Tier 1 sampling sites are available, then **Tier 2** sites must be used, unless …
- insufficient Tier 1 and Tier 2 sampling sites are available, then **Tier 3** sites must be used.
- If no Tier 1, 2, or 3 sites are available, sampling sites must be representative of plumbing materials typically found throughout the water system.

TIER 1 SITES - Single family residences with either: o Lead service lines (LSL)* o Interior lead plumbing Multiple family residences (MFR) with LSLs or interior lead plumbing may be used as Tier 1 sites when MFR comprise at least 20 percent of the total service connections.
TIER 2 SITES – Other buildings or multiple family residences with either: o Lead service lines* o Interior lead plumbing
TIER 3 SITES - Single family residences with: o Copper plumbing with lead solder installed before July 1988
OTHER SITES o Sites representative of plumbing materials commonly found throughout the water supply.
*** Priority should be placed on sites with full LSLs, followed by partial LSLs, followed by lead goosenecks or pigtails.**

Also Note:

- Each round of sampling should be conducted at the **SAME** sampling sites unless …
  - a site no longer meets tiering criteria (for example, a site is no longer Tier 1 after having the lead service line replaced); or
  - a site is unavailable (for example, a site has no water service, resident refuses to participate, etc.)
- **DO NOT** sample from outside hose spigots or utility sinks.
  - For residential sites, samples **MUST BE** collected from kitchen or bathroom taps typically used for consumption. For non-residential sites, samples **MUST BE** collected from taps typically used for consumption.
- Samples **MAY NOT** be taken from taps that have point of use or point of entry treatment devices designed to remove inorganic contaminants, such as an iron removal filter, reverse osmosis system, or water softener.

Lead and Copper Sampling Pool Form Instructions

Water Supply Name, WSSN, and County: Enter your water supply information.

Standard Number of Sites Required: Enter the standard number of sites you are required to sample based on your population.

Reduced Number of Sites Required: Enter the number of sites you would be required to sample if the MDEQ reduces your monitoring.

People Served	Standard Sites	Reduced Sites
More than 100,000	100	50
10,001 to 100,000	60	30
3,301 to 10,000	40	20
501 to 3,300	20	10
101 to 500	10	5
Fewer than 101	5	5

Address: Enter the street number or other unique identifier (such as lot or unit number) of the sampling site and include the city if the water utility services multiple cities.

Tier, Category, and Structure Type: Enter the appropriate codes from the table below in the Tier, Category, and Structure Type columns to identify the selection criteria for each site.

Tier	Category	Structure Type	Description
Tier 1	A	SFR	Single Family Residence (SFR) with lead service line
	B	SFR	SFR with interior lead plumbing
	C	MFR	Multi-family Residence (MFR) if MFRs comprise at least 20% of total service connections
Tier 2	D	MFR or BLDG	MFR or other building (BLDG) with lead service line
	E	MFR or BLDG	MFR or other BLDG with interior lead plumbing
Tier 3	F	SFR	SFR with copper plumbing with lead solder installed before 1988
Other	OT	SFR, MFR, Or BLDG	If no Tier 1, 2, 3 sites, use sites representative of plumbing commonly found throughout the supply

Service Line and Interior Plumbing Material: Enter the appropriate codes from the table below in the Service Line Material and Interior Plumbing Material columns.

Material		
L	=	Lead
CLS	=	Copper with lead solder installed before July 1988
C	=	Copper installed after July 1988
G	=	Galvanized
P	=	Plastic

Site Validation Method: Enter method used to verify site information (permit records, visual inspection, etc.).

NOTE: It is **highly recommended** that the plan contains more sites than are required for standard monitoring. For example, if the standard number of required sampling sites is 10, list 5 or more additional, appropriately tiered sites that may be used as an alternate if an original site is unavailable.

Michigan Lead and Copper Rule

Lead and Copper Tap Sample Site Selection Criteria

Community water supplies must identify a pool of lead and copper sampling sites containing **AT LEAST** the number of sites necessary to conduct **STANDARD** monitoring (see instructions for number of required sites). It is highly recommended that the sampling pool contain more sites than required in case routine sites are unavailable at time of sampling. The sampling pool must target high risk sites using the criteria below.

- **Samples must be collected from Tier 1 sites, unless …**
- insufficient Tier 1 sampling sites are available, then **Tier 2** sites must be used, unless …
- insufficient Tier 1 and Tier 2 sampling sites are available, then **Tier 3** sites must be used.
- If no Tier 1, 2, or 3 sites are available, sampling sites must be representative of plumbing materials typically found throughout the water system.

TIER 1 SITES - Single family residences with either: o Lead service lines (LSL)***** o Interior lead plumbing Multiple family residences (MFR) with LSLs or interior lead plumbing may be used as Tier 1 sites when MFR comprise at least 20 percent of the total service connections.
TIER 2 SITES – Other buildings or multiple family residences with either: o Lead service lines***** o Interior lead plumbing
TIER 3 SITES - Single family residences with: o Copper plumbing with lead solder installed before July 1988
OTHER SITES o Sites representative of plumbing materials commonly found throughout the water supply.
*** Priority should be placed on sites with full LSLs, followed by partial LSLs, followed by lead goosenecks or pigtails.**

Also Note:

- Each round of sampling should be conducted at the **SAME** sampling sites unless …
  - a site no longer meets tiering criteria (for example, a site is no longer Tier 1 after having the lead service line replaced); or
  - a site is unavailable (for example, a site has no water service, resident refuses to participate, etc.)
- **DO NOT** sample from outside hose spigots or utility sinks.
  - For residential sites, samples **MUST BE** collected from kitchen or bathroom taps typically used for consumption. For non-residential sites, samples **MUST BE** collected from taps typically used for consumption.
- Samples **MAY NOT** be taken from taps that have point of use or point of entry treatment devices designed to remove inorganic contaminants, such as an iron removal filter, reverse osmosis system, or water softener.

Lead and Copper Sampling Pool Form Instructions

Water Supply Name, WSSN, and County: Enter your water supply information.

Standard Number of Sites Required: Enter the standard number of sites you are required to sample based on your population.

Reduced Number of Sites Required: Enter the number of sites you would be required to sample if the MDEQ reduces your monitoring.

People Served	Standard Sites	Reduced Sites
More than 100,000	100	50
10,001 to 100,000	60	30
3,301 to 10,000	40	20
501 to 3,300	20	10
101 to 500	10	5
Fewer than 101	5	5

Address: Enter the street number or other unique identifier (such as lot or unit number) of the sampling site and include the city if the water utility services multiple cities.

Tier, Category, and Structure Type: Enter the appropriate codes from the table below in the Tier, Category, and Structure Type columns to identify the selection criteria for each site.

Tier	Category	Structure Type	Description
Tier 1	A	SFR	Single Family Residence (SFR) with lead service line
	B	SFR	SFR with interior lead plumbing
	C	MFR	Multi-family Residence (MFR) if MFRs comprise at least 20% of total service connections
Tier 2	D	MFR or BLDG	MFR or other building (BLDG) with lead service line
	E	MFR or BLDG	MFR or other BLDG with interior lead plumbing
Tier 3	F	SFR	SFR with copper plumbing with lead solder installed before 1988
Other	OT	SFR, MFR, Or BLDG	If no Tier 1, 2, 3 sites, use sites representative of plumbing commonly found throughout the supply

Service Line and Interior Plumbing Material: Enter the appropriate codes from the table below in the Service Line Material and Interior Plumbing Material columns.

Material		
L	=	Lead
CLS	=	Copper with lead solder installed before July 1988
C	=	Copper installed after July 1988
G	=	Galvanized
P	=	Plastic

Site Validation Method: Enter method used to verify site information (permit records, visual inspection, etc.).

NOTE: It is **highly recommended** that the plan contains more sites than are required for standard monitoring. For example, if the standard number of required sampling sites is 10, list 5 or more additional, appropriately tiered sites that may be used as an alternate if an original site is unavailable.

SAMPLING PLAN – LEAD AND COPPER

Issued under authority of the Michigan Safe Drinking Water Act, 1976 PA 399, and Administrative Rules, as amended. Administrative Rule R 325.10710a requires a water supply to monitor for lead and copper according to a pool of targeted sampling sites in accordance with designated site selection criteria. Complete and submit this form to MDEQ.

Michigan Lead and Copper Rule
Lead and Copper Tap Sample Site Selection Criteria

Community water supplies must identify a pool of lead and copper sampling sites containing **AT LEAST** the number of sites necessary to conduct **STANDARD** monitoring (see instructions for number of required sites). It is highly recommended that the sampling pool contain more sites than required in case routine sites are unavailable at time of sampling. The sampling pool must target high risk sites using the criteria below.

- **Samples must be collected from Tier 1 sites, unless …**
- insufficient Tier 1 sampling sites are available, then **Tier 2** sites must be used, unless …
- insufficient Tier 1 and Tier 2 sampling sites are available, then **Tier 3** sites must be used.
- If no Tier 1, 2, or 3 sites are available, sampling sites must be representative of plumbing materials typically found throughout the water system.

TIER 1 SITES - Single family residences with either: o Lead service lines (LSL)* o Interior lead plumbing Multiple family residences (MFR) with LSLs or interior lead plumbing may be used as Tier 1 sites when MFR comprise at least 20 percent of the total service connections.
TIER 2 SITES – Other buildings or multiple family residences with either: o Lead service lines* o Interior lead plumbing
TIER 3 SITES - Single family residences with: o Copper plumbing with lead solder installed before July 1988
OTHER SITES o Sites representative of plumbing materials commonly found throughout the water supply.
*** Priority should be placed on sites with full LSLs, followed by partial LSLs, followed by lead goosenecks or pigtails.**

Also Note:

- Each round of sampling should be conducted at the **SAME** sampling sites unless …
  - a site no longer meets tiering criteria (for example, a site is no longer Tier 1 after having the lead service line replaced); or
  - a site is unavailable (for example, a site has no water service, resident refuses to participate, etc.)
- **DO NOT** sample from outside hose spigots or utility sinks.
  - For residential sites, samples **MUST BE** collected from kitchen or bathroom taps typically used for consumption. For non-residential sites, samples **MUST BE** collected from taps typically used for consumption.
- Samples **MAY NOT** be taken from taps that have point of use or point of entry treatment devices designed to remove inorganic contaminants, such as an iron removal filter, reverse osmosis system, or water softener.

Lead and Copper Sampling Pool Form Instructions

Water Supply Name, WSSN, and County: Enter your water supply information.

Standard Number of Sites Required: Enter the standard number of sites you are required to sample based on your population.

Reduced Number of Sites Required: Enter the number of sites you would be required to sample if the MDEQ reduces your monitoring.

People Served	Standard Sites	Reduced Sites
More than 100,000	100	50
10,001 to 100,000	60	30
3,301 to 10,000	40	20
501 to 3,300	20	10
101 to 500	10	5
Fewer than 101	5	5

Address: Enter the street number or other unique identifier (such as lot or unit number) of the sampling site and include the city if the water utility services multiple cities.

Tier, Category, and Structure Type: Enter the appropriate codes from the table below in the Tier, Category, and Structure Type columns to identify the selection criteria for each site.

Tier	Category	Structure Type	Description
Tier 1	A	SFR	Single Family Residence (SFR) with lead service line
	B	SFR	SFR with interior lead plumbing
	C	MFR	Multi-family Residence (MFR) if MFRs comprise at least 20% of total service connections
Tier 2	D	MFR or BLDG	MFR or other building (BLDG) with lead service line
	E	MFR or BLDG	MFR or other BLDG with interior lead plumbing
Tier 3	F	SFR	SFR with copper plumbing with lead solder installed before 1988
Other	OT	SFR, MFR, Or BLDG	If no Tier 1, 2, 3 sites, use sites representative of plumbing commonly found throughout the supply

Service Line and Interior Plumbing Material: Enter the appropriate codes from the table below in the Service Line Material and Interior Plumbing Material columns.

Material		
L	=	Lead
CLS	=	Copper with lead solder installed before July 1988
C	=	Copper installed after July 1988
G	=	Galvanized
P	=	Plastic

Site Validation Method: Enter method used to verify site information (permit records, visual inspection, etc.).

NOTE: It is **highly recommended** that the plan contains more sites than are required for standard monitoring. For example, if the standard number of required sampling sites is 10, list 5 or more additional, appropriately tiered sites that may be used as an alternate if an original site is unavailable.

MICHIGAN DEPARTMENT OF ENVIRONMENTAL QUALITY
DRINKING WATER AND MUNICIPAL ASSISTANCE DIVISION

SAMPLING PLAN – LEAD AND COPPER

Issued under authority of the Michigan Safe Drinking Water Act, 1976 PA 399, and Administrative Rules, as amended. Administrative Rule R 325.10710a requires a water supply to monitor for lead and copper according to a pool of targeted sampling sites in accordance with designated site selection criteria. Complete and submit this form to MDEQ.

Use additional pages for water supplies requiring more sampling sites.

Michigan Lead and Copper Rule
Lead and Copper Tap Sample Site Selection Criteria

Community water supplies must identify a pool of lead and copper sampling sites containing **AT LEAST** the number of sites necessary to conduct **STANDARD** monitoring (see instructions for number of required sites). It is highly recommended that the sampling pool contain more sites than required in case routine sites are unavailable at time of sampling. The sampling pool must target high risk sites using the criteria below.

- **Samples must be collected from Tier 1 sites, unless ...**
- insufficient Tier 1 sampling sites are available, then **Tier 2** sites must be used, unless ...
- insufficient Tier 1 and Tier 2 sampling sites are available, then **Tier 3** sites must be used.
- If no Tier 1, 2, or 3 sites are available, sampling sites must be representative of plumbing materials typically found throughout the water system.

TIER 1 SITES - Single family residences with either: o Lead service lines (LSL)* o Interior lead plumbing Multiple family residences (MFR) with LSLs or interior lead plumbing may be used as Tier 1 sites when MFR comprise at least 20 percent of the total service connections.
TIER 2 SITES – Other buildings or multiple family residences with either: o Lead service lines* o Interior lead plumbing
TIER 3 SITES - Single family residences with: o Copper plumbing with lead solder installed before July 1988
OTHER SITES o Sites representative of plumbing materials commonly found throughout the water supply.
*** Priority should be placed on sites with full LSLs, followed by partial LSLs, followed by lead goosenecks or pigtails.**

Also Note:

- Each round of sampling should be conducted at the **SAME** sampling sites unless ...
  - a site no longer meets tiering criteria (for example, a site is no longer Tier 1 after having the lead service line replaced); or
  - a site is unavailable (for example, a site has no water service, resident refuses to participate, etc.)
- **DO NOT** sample from outside hose spigots or utility sinks.
  - For residential sites, samples **MUST BE** collected from kitchen or bathroom taps typically used for consumption. For non-residential sites, samples **MUST BE** collected from taps typically used for consumption.
- Samples **MAY NOT** be taken from taps that have point of use or point of entry treatment devices designed to remove inorganic contaminants, such as an iron removal filter, reverse osmosis system, or water softener.

Lead and Copper Sampling Pool Form Instructions

Water Supply Name, WSSN, and County: Enter your water supply information.

Standard Number of Sites Required: Enter the standard number of sites you are required to sample based on your population.

Reduced Number of Sites Required: Enter the number of sites you would be required to sample if the MDEQ reduces your monitoring.

People Served	Standard Sites	Reduced Sites
More than 100,000	100	50
10,001 to 100,000	60	30
3,301 to 10,000	40	20
501 to 3,300	20	10
101 to 500	10	5
Fewer than 101	5	5

Address: Enter the street number or other unique identifier (such as lot or unit number) of the sampling site and include the city if the water utility services multiple cities.

Tier, Category, and Structure Type: Enter the appropriate codes from the table below in the Tier, Category, and Structure Type columns to identify the selection criteria for each site.

Tier	Category	Structure Type	Description
Tier 1	A	SFR	Single Family Residence (SFR) with lead service line
	B	SFR	SFR with interior lead plumbing
	C	MFR	Multi-family Residence (MFR) if MFRs comprise at least 20% of total service connections
Tier 2	D	MFR or BLDG	MFR or other building (BLDG) with lead service line
	E	MFR or BLDG	MFR or other BLDG with interior lead plumbing
Tier 3	F	SFR	SFR with copper plumbing with lead solder installed before 1988
Other	OT	SFR, MFR, Or BLDG	If no Tier 1, 2, 3 sites, use sites representative of plumbing commonly found throughout the supply

Service Line and Interior Plumbing Material: Enter the appropriate codes from the table below in the Service Line Material and Interior Plumbing Material columns.

Material		
L	=	Lead
CLS	=	Copper with lead solder installed before July 1988
C	=	Copper installed after July 1988
G	=	Galvanized
P	=	Plastic

Site Validation Method: Enter method used to verify site information (permit records, visual inspection, etc.).

NOTE: It is **highly recommended** that the plan contains more sites than are required for standard monitoring. For example, if the standard number of required sampling sites is 10, list 5 or more additional, appropriately tiered sites that may be used as an alternate if an original site is unavailable.

MICHIGAN DEPARTMENT OF ENVIRONMENTAL QUALITY

MICHIGAN COMMUNITY WATER SUPPLY LEAD AND COPPER TAP SAMPLING POOL (cont.)

WSSN: _____ Supply Name: _____ Page _____ of _____

Site No.	Address	Tier Level	Category	Structure Type	Service Line Material	Interior Plumbing Material	Site Validation Method
00	*Ex: 0000 Any Street – Any Town, MI*	*1*	*A*	*SFR*	*L*	*C*	*Visual*

Use additional pages for water supplies requiring more sampling sites.

Michigan Lead and Copper Rule
Lead and Copper Tap Sample Site Selection Criteria

Community water supplies must identify a pool of lead and copper sampling sites containing **AT LEAST** the number of sites necessary to conduct **STANDARD** monitoring (see instructions for number of required sites). It is highly recommended that the sampling pool contain more sites than required in case routine sites are unavailable at time of sampling. The sampling pool must target high risk sites using the criteria below.

- **Samples must be collected from Tier 1 sites, unless …**
- insufficient Tier 1 sampling sites are available, then **Tier 2** sites must be used, unless …
- insufficient Tier 1 and Tier 2 sampling sites are available, then **Tier 3** sites must be used.
- If no Tier 1, 2, or 3 sites are available, sampling sites must be representative of plumbing materials typically found throughout the water system.

TIER 1 SITES - Single family residences with either: o Lead service lines (LSL)***** o Interior lead plumbing Multiple family residences (MFR) with LSLs or interior lead plumbing may be used as Tier 1 sites when MFR comprise at least 20 percent of the total service connections.
TIER 2 SITES – Other buildings or multiple family residences with either: o Lead service lines***** o Interior lead plumbing
TIER 3 SITES - Single family residences with: o Copper plumbing with lead solder installed before July 1988
OTHER SITES o Sites representative of plumbing materials commonly found throughout the water supply.
*** Priority should be placed on sites with full LSLs, followed by partial LSLs, followed by lead goosenecks or pigtails.**

Also Note:

- Each round of sampling should be conducted at the **SAME** sampling sites unless …
  - a site no longer meets tiering criteria (for example, a site is no longer Tier 1 after having the lead service line replaced); or
  - a site is unavailable (for example, a site has no water service, resident refuses to participate, etc.)
- **DO NOT** sample from outside hose spigots or utility sinks.
  - For residential sites, samples **MUST BE** collected from kitchen or bathroom taps typically used for consumption. For non-residential sites, samples **MUST BE** collected from taps typically used for consumption.
- Samples **MAY NOT** be taken from taps that have point of use or point of entry treatment devices designed to remove inorganic contaminants, such as an iron removal filter, reverse osmosis system, or water softener.

Lead and Copper Sampling Pool Form Instructions

Water Supply Name, WSSN, and County: Enter your water supply information.

Standard Number of Sites Required: Enter the standard number of sites you are required to sample based on your population.

Reduced Number of Sites Required: Enter the number of sites you would be required to sample if the MDEQ reduces your monitoring.

People Served	Standard Sites	Reduced Sites
More than 100,000	100	50
10,001 to 100,000	60	30
3,301 to 10,000	40	20
501 to 3,300	20	10
101 to 500	10	5
Fewer than 101	5	5

Address: Enter the street number or other unique identifier (such as lot or unit number) of the sampling site and include the city if the water utility services multiple cities.

Tier, Category, and Structure Type: Enter the appropriate codes from the table below in the Tier, Category, and Structure Type columns to identify the selection criteria for each site.

Tier	Category	Structure Type	Description
Tier 1	A	SFR	Single Family Residence (SFR) with lead service line
	B	SFR	SFR with interior lead plumbing
	C	MFR	Multi-family Residence (MFR) if MFRs comprise at least 20% of total service connections
Tier 2	D	MFR or BLDG	MFR or other building (BLDG) with lead service line
	E	MFR or BLDG	MFR or other BLDG with interior lead plumbing
Tier 3	F	SFR	SFR with copper plumbing with lead solder installed before 1988
Other	OT	SFR, MFR, Or BLDG	If no Tier 1, 2, 3 sites, use sites representative of plumbing commonly found throughout the supply

Service Line and Interior Plumbing Material: Enter the appropriate codes from the table below in the Service Line Material and Interior Plumbing Material columns.

Material		
L	=	Lead
CLS	=	Copper with lead solder installed before July 1988
C	=	Copper installed after July 1988
G	=	Galvanized
P	=	Plastic

Site Validation Method: Enter method used to verify site information (permit records, visual inspection, etc.).

NOTE: It is **highly recommended** that the plan contains more sites than are required for standard monitoring. For example, if the standard number of required sampling sites is 10, list 5 or more additional, appropriately tiered sites that may be used as an alternate if an original site is unavailable.

MICHIGAN DEPARTMENT OF ENVIRONMENTAL QUALITY
DRINKING WATER AND MUNICIPAL ASSISTANCE DIVISION

SAMPLING PLAN – LEAD AND COPPER

Issued under authority of the Michigan Safe Drinking Water Act, 1976 PA 399, and Administrative Rules, as amended. Administrative Rule R 325.10710a requires a water supply to monitor for lead and copper according to a pool of targeted sampling sites in accordance with designated site selection criteria. Complete and submit this form to MDEQ.

Lead and Copper Sampling Pool Form Instructions

Water Supply Name, WSSN, and County: Enter your water supply information.

Standard Number of Sites Required: Enter the standard number of sites you are required to sample based on your population.

Reduced Number of Sites Required: Enter the number of sites you would be required to sample if the MDEQ reduces your monitoring.

People Served	Standard Sites	Reduced Sites
More than 100,000	100	50
10,001 to 100,000	60	30
3,301 to 10,000	40	20
501 to 3,300	20	10
101 to 500	10	5
Fewer than 101	5	5

Address: Enter the street number or other unique identifier (such as lot or unit number) of the sampling site and include the city if the water utility services multiple cities.

Tier, Category, and Structure Type: Enter the appropriate codes from the table below in the Tier, Category, and Structure Type columns to identify the selection criteria for each site.

Tier	Category	Structure Type	Description
Tier 1	A	SFR	Single Family Residence (SFR) with lead service line
	B	SFR	SFR with interior lead plumbing
	C	MFR	Multi-family Residence (MFR) if MFRs comprise at least 20% of total service connections
Tier 2	D	MFR or BLDG	MFR or other building (BLDG) with lead service line
	E	MFR or BLDG	MFR or other BLDG with interior lead plumbing
Tier 3	F	SFR	SFR with copper plumbing with lead solder installed before 1988
Other	OT	SFR, MFR, Or BLDG	If no Tier 1, 2, 3 sites, use sites representative of plumbing commonly found throughout the supply

Service Line and Interior Plumbing Material: Enter the appropriate codes from the table below in the Service Line Material and Interior Plumbing Material columns.

Material		
L	=	Lead
CLS	=	Copper with lead solder installed before July 1988
C	=	Copper installed after July 1988
G	=	Galvanized
P	=	Plastic

Site Validation Method: Enter method used to verify site information (permit records, visual inspection, etc.).

NOTE: It is **highly recommended** that the plan contains more sites than are required for standard monitoring. For example, if the standard number of required sampling sites is 10, list 5 or more additional, appropriately tiered sites that may be used as an alternate if an original site is unavailable.

Use additional pages for water supplies requiring more sampling sites.

Michigan Lead and Copper Rule
Lead and Copper Tap Sample Site Selection Criteria

Community water supplies must identify a pool of lead and copper sampling sites containing **AT LEAST** the number of sites necessary to conduct **STANDARD** monitoring (see instructions for number of required sites). It is highly recommended that the sampling pool contain more sites than required in case routine sites are unavailable at time of sampling. The sampling pool must target high risk sites using the criteria below.

- **Samples must be collected from Tier 1 sites, unless …**
- insufficient Tier 1 sampling sites are available, then **Tier 2** sites must be used, unless …

- insufficient Tier 1 and Tier 2 sampling sites are available, then **Tier 3** sites must be used.
- If no Tier 1, 2, or 3 sites are available, sampling sites must be representative of plumbing materials typically found throughout the water system.

TIER 1 SITES - Single family residences with either: o Lead service lines (LSL)***** o Interior lead plumbing Multiple family residences (MFR) with LSLs or interior lead plumbing may be used as Tier 1 sites when MFR comprise at least 20 percent of the total service connections.
TIER 2 SITES – Other buildings or multiple family residences with either: o Lead service lines***** o Interior lead plumbing
TIER 3 SITES - Single family residences with: o Copper plumbing with lead solder installed before July 1988
OTHER SITES o Sites representative of plumbing materials commonly found throughout the water supply.
*** Priority should be placed on sites with full LSLs, followed by partial LSLs, followed by lead goosenecks or pigtails.**

Also Note:

- Each round of sampling should be conducted at the **SAME** sampling sites unless …
  - a site no longer meets tiering criteria (for example, a site is no longer Tier 1 after having the lead service line replaced); or
  - a site is unavailable (for example, a site has no water service, resident refuses to participate, etc.)
- **DO NOT** sample from outside hose spigots or utility sinks.
  - For residential sites, samples **MUST BE** collected from kitchen or bathroom taps typically used for consumption. For non-residential sites, samples **MUST BE** collected from taps typically used for consumption.
- Samples **MAY NOT** be taken from taps that have point of use or point of entry treatment devices designed to remove inorganic contaminants, such as an iron removal filter, reverse osmosis system, or water softener.

Lead and Copper Sampling Pool Form Instructions

Water Supply Name, WSSN, and County: Enter your water supply information.

Standard Number of Sites Required: Enter the standard number of sites you are required to sample based on your population.

Reduced Number of Sites Required: Enter the number of sites you would be required to sample if the MDEQ reduces your monitoring.

People Served	Standard Sites	Reduced Sites
More than 100,000	100	50
10,001 to 100,000	60	30
3,301 to 10,000	40	20
501 to 3,300	20	10
101 to 500	10	5
Fewer than 101	5	5

Address: Enter the street number or other unique identifier (such as lot or unit number) of the sampling site and include the city if the water utility services multiple cities.

Tier, Category, and Structure Type: Enter the appropriate codes from the table below in the Tier, Category, and Structure Type columns to identify the selection criteria for each site.

Tier	Category	Structure Type	Description
Tier 1	A	SFR	Single Family Residence (SFR) with lead service line
	B	SFR	SFR with interior lead plumbing
	C	MFR	Multi-family Residence (MFR) if MFRs comprise at least 20% of total service connections
Tier 2	D	MFR or BLDG	MFR or other building (BLDG) with lead service line
	E	MFR or BLDG	MFR or other BLDG with interior lead plumbing
Tier 3	F	SFR	SFR with copper plumbing with lead solder installed before 1988
Other	OT	SFR, MFR, Or BLDG	If no Tier 1, 2, 3 sites, use sites representative of plumbing commonly found throughout the supply

Service Line and Interior Plumbing Material: Enter the appropriate codes from the table below in the Service Line Material and Interior Plumbing Material columns.

Material		
L	=	Lead
CLS	=	Copper with lead solder installed before July 1988
C	=	Copper installed after July 1988
G	=	Galvanized
P	=	Plastic

Site Validation Method: Enter method used to verify site information (permit records, visual inspection, etc.).

NOTE: It is **highly recommended** that the plan contains more sites than are required for standard monitoring. For example, if the standard number of required sampling sites is 10, list 5 or more additional, appropriately tiered sites that may be used as an alternate if an original site is unavailable.

Lead and Copper Sampling Pool Form Instructions

Water Supply Name, WSSN, and County: Enter your water supply information.

Standard Number of Sites Required: Enter the standard number of sites you are required to sample based on your population.

Reduced Number of Sites Required: Enter the number of sites you would be required to sample if the MDEQ reduces your monitoring.

People Served	Standard Sites	Reduced Sites
More than 100,000	100	50
10,001 to 100,000	60	30
3,301 to 10,000	40	20
501 to 3,300	20	10
101 to 500	10	5
Fewer than 101	5	5

Address: Enter the street number or other unique identifier (such as lot or unit number) of the sampling site and include the city if the water utility services multiple cities.

Tier, Category, and Structure Type: Enter the appropriate codes from the table below in the Tier, Category, and Structure Type columns to identify the selection criteria for each site.

Tier	Category	Structure Type	Description
Tier 1	A	SFR	Single Family Residence (SFR) with lead service line
	B	SFR	SFR with interior lead plumbing
	C	MFR	Multi-family Residence (MFR) if MFRs comprise at least 20% of total service connections
Tier 2	D	MFR or BLDG	MFR or other building (BLDG) with lead service line
	E	MFR or BLDG	MFR or other BLDG with interior lead plumbing
Tier 3	F	SFR	SFR with copper plumbing with lead solder installed before 1988
Other	OT	SFR, MFR, Or BLDG	If no Tier 1, 2, 3 sites, use sites representative of plumbing commonly found throughout the supply

Service Line and Interior Plumbing Material: Enter the appropriate codes from the table below in the Service Line Material and Interior Plumbing Material columns.

Material		
L	=	Lead
CLS	=	Copper with lead solder installed before July 1988
C	=	Copper installed after July 1988
G	=	Galvanized
P	=	Plastic

Site Validation Method: Enter method used to verify site information (permit records, visual inspection, etc.).

NOTE: It is **highly recommended** that the plan contains more sites than are required for standard monitoring. For example, if the standard number of required sampling sites is 10, list 5 or more additional, appropriately tiered sites that may be used as an alternate if an original site is unavailable.

Use additional pages for water supplies requiring more sampling sites.

Michigan Lead and Copper Rule
Lead and Copper Tap Sample Site Selection Criteria

Community water supplies must identify a pool of lead and copper sampling sites containing **AT LEAST** the number of sites necessary to conduct **STANDARD** monitoring (see instructions for number of required sites). It is highly recommended that the sampling pool contain more sites than required in case routine sites are unavailable at time of sampling. The sampling pool must target high risk sites using the criteria below.

- **Samples must be collected from Tier 1 sites, unless …**
- insufficient Tier 1 sampling sites are available, then **Tier 2** sites must be used, unless …
- insufficient Tier 1 and Tier 2 sampling sites are available, then **Tier 3** sites must be used.
- If no Tier 1, 2, or 3 sites are available, sampling sites must be representative of plumbing materials typically found throughout the water system.

TIER 1 SITES - Single family residences with either: o Lead service lines (LSL)***** o Interior lead plumbing Multiple family residences (MFR) with LSLs or interior lead plumbing may be used as Tier 1 sites when MFR comprise at least 20 percent of the total service connections.
TIER 2 SITES – Other buildings or multiple family residences with either: o Lead service lines***** o Interior lead plumbing
TIER 3 SITES - Single family residences with: o Copper plumbing with lead solder installed before July 1988
OTHER SITES o Sites representative of plumbing materials commonly found throughout the water supply.
*** Priority should be placed on sites with full LSLs, followed by partial LSLs, followed by lead goosenecks or pigtails.**

Also Note:

- Each round of sampling should be conducted at the **SAME** sampling sites unless …
  - a site no longer meets tiering criteria (for example, a site is no longer Tier 1 after having the lead service line replaced); or
  - a site is unavailable (for example, a site has no water service, resident refuses to participate, etc.)
- **DO NOT** sample from outside hose spigots or utility sinks.
  - For residential sites, samples **MUST BE** collected from kitchen or bathroom taps typically used for consumption. For non-residential sites, samples **MUST BE** collected from taps typically used for consumption.
- Samples **MAY NOT** be taken from taps that have point of use or point of entry treatment devices designed to remove inorganic contaminants, such as an iron removal filter, reverse osmosis system, or water softener.

Lead and Copper Sampling Pool Form Instructions

Water Supply Name, WSSN, and County: Enter your water supply information.

Standard Number of Sites Required: Enter the standard number of sites you are required to sample based on your population.

Reduced Number of Sites Required: Enter the number of sites you would be required to sample if the MDEQ reduces your monitoring.

People Served	Standard Sites	Reduced Sites
More than 100,000	100	50
10,001 to 100,000	60	30
3,301 to 10,000	40	20
501 to 3,300	20	10
101 to 500	10	5
Fewer than 101	5	5

Address: Enter the street number or other unique identifier (such as lot or unit number) of the sampling site and include the city if the water utility services multiple cities.

Tier, Category, and Structure Type: Enter the appropriate codes from the table below in the Tier, Category, and Structure Type columns to identify the selection criteria for each site.

Tier	Category	Structure Type	Description
Tier 1	A	SFR	Single Family Residence (SFR) with lead service line
	B	SFR	SFR with interior lead plumbing
	C	MFR	Multi-family Residence (MFR) if MFRs comprise at least 20% of total service connections
Tier 2	D	MFR or BLDG	MFR or other building (BLDG) with lead service line
	E	MFR or BLDG	MFR or other BLDG with interior lead plumbing
Tier 3	F	SFR	SFR with copper plumbing with lead solder installed before 1988
Other	OT	SFR, MFR, Or BLDG	If no Tier 1, 2, 3 sites, use sites representative of plumbing commonly found throughout the supply

Service Line and Interior Plumbing Material: Enter the appropriate codes from the table below in the Service Line Material and Interior Plumbing Material columns.

Material		
L	=	Lead
CLS	=	Copper with lead solder installed before July 1988
C	=	Copper installed after July 1988
G	=	Galvanized
P	=	Plastic

Site Validation Method: Enter method used to verify site information (permit records, visual inspection, etc.).

NOTE: It is **highly recommended** that the plan contains more sites than are required for standard monitoring. For example, if the standard number of required sampling sites is 10, list 5 or more additional, appropriately tiered sites that may be used as an alternate if an original site is unavailable.

MICHIGAN DEPARTMENT OF ENVIRONMENTAL QUALITY
DRINKING WATER AND MUNICIPAL ASSISTANCE DIVISION

SAMPLING PLAN – LEAD AND COPPER

Issued under authority of the Michigan Safe Drinking Water Act, 1976 PA 399, and Administrative Rules, as amended. Administrative Rule R 325.10710a requires a water supply to monitor for lead and copper according to a pool of targeted sampling sites in accordance with designated site selection criteria. Complete and submit this form to MDEQ.

Michigan Lead and Copper Rule
Lead and Copper Tap Sample Site Selection Criteria

Community water supplies must identify a pool of lead and copper sampling sites containing **AT LEAST** the number of sites necessary to conduct **STANDARD** monitoring (see instructions for number of required sites). It is highly recommended that the sampling pool contain more sites than required in case routine sites are unavailable at time of sampling. The sampling pool must target high risk sites using the criteria below.

- **Samples must be collected from Tier 1 sites, unless ...**
- insufficient Tier 1 sampling sites are available, then **Tier 2** sites must be used, unless ...
- insufficient Tier 1 and Tier 2 sampling sites are available, then **Tier 3** sites must be used.
- If no Tier 1, 2, or 3 sites are available, sampling sites must be representative of plumbing materials typically found throughout the water system.

TIER 1 SITES - Single family residences with either: o Lead service lines (LSL)* o Interior lead plumbing Multiple family residences (MFR) with LSLs or interior lead plumbing may be used as Tier 1 sites when MFR comprise at least 20 percent of the total service connections.
TIER 2 SITES – Other buildings or multiple family residences with either: o Lead service lines* o Interior lead plumbing
TIER 3 SITES - Single family residences with: o Copper plumbing with lead solder installed before July 1988
OTHER SITES o Sites representative of plumbing materials commonly found throughout the water supply.
*** Priority should be placed on sites with full LSLs, followed by partial LSLs, followed by lead goosenecks or pigtails.**

Also Note:

- Each round of sampling should be conducted at the **SAME** sampling sites unless ...
  - a site no longer meets tiering criteria (for example, a site is no longer Tier 1 after having the lead service line replaced); or
  - a site is unavailable (for example, a site has no water service, resident refuses to participate, etc.)
- **DO NOT** sample from outside hose spigots or utility sinks.
  - For residential sites, samples **MUST BE** collected from kitchen or bathroom taps typically used for consumption. For non-residential sites, samples **MUST BE** collected from taps typically used for consumption.
- Samples **MAY NOT** be taken from taps that have point of use or point of entry treatment devices designed to remove inorganic contaminants, such as an iron removal filter, reverse osmosis system, or water softener.

Lead and Copper Sampling Pool Form Instructions

Water Supply Name, WSSN, and County: Enter your water supply information.

Standard Number of Sites Required: Enter the standard number of sites you are required to sample based on your population.

Reduced Number of Sites Required: Enter the number of sites you would be required to sample if the MDEQ reduces your monitoring.

People Served	Standard Sites	Reduced Sites
More than 100,000	100	50
10,001 to 100,000	60	30
3,301 to 10,000	40	20
501 to 3,300	20	10
101 to 500	10	5
Fewer than 101	5	5

Address: Enter the street number or other unique identifier (such as lot or unit number) of the sampling site and include the city if the water utility services multiple cities.

Tier, Category, and Structure Type: Enter the appropriate codes from the table below in the Tier, Category, and Structure Type columns to identify the selection criteria for each site.

Tier	Category	Structure Type	Description
Tier 1	A	SFR	Single Family Residence (SFR) with lead service line
	B	SFR	SFR with interior lead plumbing
	C	MFR	Multi-family Residence (MFR) if MFRs comprise at least 20% of total service connections
Tier 2	D	MFR or BLDG	MFR or other building (BLDG) with lead service line
	E	MFR or BLDG	MFR or other BLDG with interior lead plumbing
Tier 3	F	SFR	SFR with copper plumbing with lead solder installed before 1988
Other	OT	SFR, MFR, Or BLDG	If no Tier 1, 2, 3 sites, use sites representative of plumbing commonly found throughout the supply

Service Line and Interior Plumbing Material: Enter the appropriate codes from the table below in the Service Line Material and Interior Plumbing Material columns.

Material		
L	=	Lead
CLS	=	Copper with lead solder installed before July 1988
C	=	Copper installed after July 1988
G	=	Galvanized
P	=	Plastic

Site Validation Method: Enter method used to verify site information (permit records, visual inspection, etc.).

NOTE: It is **highly recommended** that the plan contains more sites than are required for standard monitoring. For example, if the standard number of required sampling sites is 10, list 5 or more additional, appropriately tiered sites that may be used as an alternate if an original site is unavailable.

MICHIGAN DEPARTMENT OF ENVIRONMENTAL QUALITY
DRINKING WATER AND MUNICIPAL ASSISTANCE DIVISION

SAMPLING PLAN – LEAD AND COPPER

Issued under authority of the Michigan Safe Drinking Water Act, 1976 PA 399, and Administrative Rules, as amended. Administrative Rule R 325.10710a requires a water supply to monitor for lead and copper according to a pool of targeted sampling sites in accordance with designated site selection criteria. Complete and submit this form to MDEQ.

Use additional pages for water supplies requiring more sampling sites.

Michigan Lead and Copper Rule
Lead and Copper Tap Sample Site Selection Criteria

Community water supplies must identify a pool of lead and copper sampling sites containing **AT LEAST** the number of sites necessary to conduct **STANDARD** monitoring (see instructions for number of required sites). It is highly recommended that the sampling pool contain more sites than required in case routine sites are unavailable at time of sampling. The sampling pool must target high risk sites using the criteria below.

- **Samples must be collected from Tier 1 sites, unless ...**
- insufficient Tier 1 sampling sites are available, then **Tier 2** sites must be used, unless ...
- insufficient Tier 1 and Tier 2 sampling sites are available, then **Tier 3** sites must be used.
- If no Tier 1, 2, or 3 sites are available, sampling sites must be representative of plumbing materials typically found throughout the water system.

TIER 1 SITES - Single family residences with either: o Lead service lines (LSL)* o Interior lead plumbing Multiple family residences (MFR) with LSLs or interior lead plumbing may be used as Tier 1 sites when MFR comprise at least 20 percent of the total service connections.
TIER 2 SITES – Other buildings or multiple family residences with either: o Lead service lines* o Interior lead plumbing
TIER 3 SITES - Single family residences with: o Copper plumbing with lead solder installed before July 1988
OTHER SITES o Sites representative of plumbing materials commonly found throughout the water supply.
*** Priority should be placed on sites with full LSLs, followed by partial LSLs, followed by lead goosenecks or pigtails.**

Also Note:

- Each round of sampling should be conducted at the **SAME** sampling sites unless ...
  - a site no longer meets tiering criteria (for example, a site is no longer Tier 1 after having the lead service line replaced); or
  - a site is unavailable (for example, a site has no water service, resident refuses to participate, etc.)
- **DO NOT** sample from outside hose spigots or utility sinks.
  - For residential sites, samples **MUST BE** collected from kitchen or bathroom taps typically used for consumption. For non-residential sites, samples **MUST BE** collected from taps typically used for consumption.
- Samples **MAY NOT** be taken from taps that have point of use or point of entry treatment devices designed to remove inorganic contaminants, such as an iron removal filter, reverse osmosis

system, or water softener.

Lead and Copper Sampling Pool Form Instructions

Water Supply Name, WSSN, and County: Enter your water supply information.

Standard Number of Sites Required: Enter the standard number of sites you are required to sample based on your population.

Reduced Number of Sites Required: Enter the number of sites you would be required to sample if the MDEQ reduces your monitoring.

People Served	Standard Sites	Reduced Sites
More than 100,000	100	50
10,001 to 100,000	60	30
3,301 to 10,000	40	20
501 to 3,300	20	10
101 to 500	10	5
Fewer than 101	5	5

Address: Enter the street number or other unique identifier (such as lot or unit number) of the sampling site and include the city if the water utility services multiple cities.

Tier, Category, and Structure Type: Enter the appropriate codes from the table below in the Tier, Category, and Structure Type columns to identify the selection criteria for each site.

Tier	Category	Structure Type	Description
Tier 1	A	SFR	Single Family Residence (SFR) with lead service line
	B	SFR	SFR with interior lead plumbing
	C	MFR	Multi-family Residence (MFR) if MFRs comprise at least 20% of total service connections
Tier 2	D	MFR or BLDG	MFR or other building (BLDG) with lead service line
	E	MFR or BLDG	MFR or other BLDG with interior lead plumbing
Tier 3	F	SFR	SFR with copper plumbing with lead solder installed before 1988
Other	OT	SFR, MFR, Or BLDG	If no Tier 1, 2, 3 sites, use sites representative of plumbing commonly found throughout the supply

Service Line and Interior Plumbing Material: Enter the appropriate codes from the table below in the Service Line Material and Interior Plumbing Material columns.

Material		
L	=	Lead
CLS	=	Copper with lead solder installed before July 1988
C	=	Copper installed after July 1988
G	=	Galvanized
P	=	Plastic

Site Validation Method: Enter method used to verify site information (permit records, visual inspection, etc.).

NOTE: It is **highly recommended** that the plan contains more sites than are required for standard monitoring. For example, if the standard number of required sampling sites is 10, list 5 or more additional, appropriately tiered sites that may be used as an alternate if an original site is unavailable.

MICHIGAN DEPARTMENT OF ENVIRONMENTAL QUALITY
DRINKING WATER AND MUNICIPAL ASSISTANCE DIVISION

SAMPLING PLAN – LEAD AND COPPER

Issued under authority of the Michigan Safe Drinking Water Act, 1976 PA 399, and Administrative Rules, as amended. Administrative Rule R 325.10710a requires a water supply to monitor for lead and copper according to a pool of targeted sampling sites in accordance with designated site selection criteria. Complete and submit this form to MDEQ.

Michigan Lead and Copper Rule
Lead and Copper Tap Sample Site Selection Criteria

Community water supplies must identify a pool of lead and copper sampling sites containing **AT LEAST** the number of sites necessary to conduct **STANDARD** monitoring (see instructions for number of required sites). It is highly recommended that the sampling pool contain more sites than required in case routine sites are unavailable at time of sampling. The sampling pool must target high risk sites using the criteria below.

- **Samples must be collected from Tier 1 sites, unless …**
- insufficient Tier 1 sampling sites are available, then **Tier 2** sites must be used, unless …
- insufficient Tier 1 and Tier 2 sampling sites are available, then **Tier 3** sites must be used.
- If no Tier 1, 2, or 3 sites are available, sampling sites must be representative of plumbing materials typically found throughout the water system.

TIER 1 SITES - Single family residences with either: o Lead service lines (LSL)* o Interior lead plumbing Multiple family residences (MFR) with LSLs or interior lead plumbing may be used as Tier 1 sites when MFR comprise at least 20 percent of the total service connections.
TIER 2 SITES – Other buildings or multiple family residences with either: o Lead service lines* o Interior lead plumbing
TIER 3 SITES - Single family residences with: o Copper plumbing with lead solder installed before July 1988
OTHER SITES o Sites representative of plumbing materials commonly found throughout the water supply.
*** Priority should be placed on sites with full LSLs, followed by partial LSLs, followed by lead goosenecks or pigtails.**

Also Note:

- Each round of sampling should be conducted at the **SAME** sampling sites unless …
  - a site no longer meets tiering criteria (for example, a site is no longer Tier 1 after having the lead service line replaced); or
  - a site is unavailable (for example, a site has no water service, resident refuses to participate, etc.)
- **DO NOT** sample from outside hose spigots or utility sinks.
  - For residential sites, samples **MUST BE** collected from kitchen or bathroom taps typically used for consumption. For non-residential sites, samples **MUST BE** collected from taps typically used for consumption.
- Samples **MAY NOT** be taken from taps that have point of use or point of entry treatment devices designed to remove inorganic contaminants, such as an iron removal filter, reverse osmosis system, or water softener.

Lead and Copper Sampling Pool Form Instructions

Water Supply Name, WSSN, and County: Enter your water supply information.

Standard Number of Sites Required: Enter the standard number of sites you are required to sample based on your population.

Reduced Number of Sites Required: Enter the number of sites you would be required to sample if the MDEQ reduces your monitoring.

People Served	Standard Sites	Reduced Sites
More than 100,000	100	50
10,001 to 100,000	60	30
3,301 to 10,000	40	20
501 to 3,300	20	10
101 to 500	10	5
Fewer than 101	5	5

Address: Enter the street number or other unique identifier (such as lot or unit number) of the sampling site and include the city if the water utility services multiple cities.

Tier, Category, and Structure Type: Enter the appropriate codes from the table below in the Tier, Category, and Structure Type columns to identify the selection criteria for each site.

Tier	Category	Structure Type	Description
Tier 1	A	SFR	Single Family Residence (SFR) with lead service line
	B	SFR	SFR with interior lead plumbing
	C	MFR	Multi-family Residence (MFR) if MFRs comprise at least 20% of total service connections
Tier 2	D	MFR or BLDG	MFR or other building (BLDG) with lead service line
	E	MFR or BLDG	MFR or other BLDG with interior lead plumbing
Tier 3	F	SFR	SFR with copper plumbing with lead solder installed before 1988
Other	OT	SFR, MFR, Or BLDG	If no Tier 1, 2, 3 sites, use sites representative of plumbing commonly found throughout the supply

Service Line and Interior Plumbing Material: Enter the appropriate codes from the table below in the Service Line Material and Interior Plumbing Material columns.

Material		
L	=	Lead
CLS	=	Copper with lead solder installed before July 1988
C	=	Copper installed after July 1988
G	=	Galvanized
P	=	Plastic

Site Validation Method: Enter method used to verify site information (permit records, visual inspection, etc.).

NOTE: It is **highly recommended** that the plan contains more sites than are required for standard monitoring. For example, if the standard number of required sampling sites is 10, list 5 or more additional, appropriately tiered sites that may be used as an alternate if an original site is unavailable.

Michigan Lead and Copper Rule
Lead and Copper Tap Sample Site Selection Criteria

Community water supplies must identify a pool of lead and copper sampling sites containing **AT LEAST** the number of sites necessary to conduct **STANDARD** monitoring (see instructions for number of required sites). It is highly recommended that the sampling pool contain more sites than required in case routine sites are unavailable at time of sampling. The sampling pool must target high risk sites using the criteria below.

- **Samples must be collected from Tier 1 sites, unless …**
- insufficient Tier 1 sampling sites are available, then **Tier 2** sites must be used, unless …
- insufficient Tier 1 and Tier 2 sampling sites are available, then **Tier 3** sites must be used.
- If no Tier 1, 2, or 3 sites are available, sampling sites must be representative of plumbing materials typically found throughout the water system.

TIER 1 SITES - Single family residences with either: ○ Lead service lines (LSL)***** ○ Interior lead plumbing Multiple family residences (MFR) with LSLs or interior lead plumbing may be used as Tier 1 sites when MFR comprise at least 20 percent of the total service connections.
TIER 2 SITES – Other buildings or multiple family residences with either: ○ Lead service lines***** ○ Interior lead plumbing
TIER 3 SITES - Single family residences with: ○ Copper plumbing with lead solder installed before July 1988
OTHER SITES ○ Sites representative of plumbing materials commonly found throughout the water supply.
*** Priority should be placed on sites with full LSLs, followed by partial LSLs, followed by lead goosenecks or pigtails.**

Also Note:

- Each round of sampling should be conducted at the **SAME** sampling sites unless …
  - a site no longer meets tiering criteria (for example, a site is no longer Tier 1 after having the lead service line replaced); or
  - a site is unavailable (for example, a site has no water service, resident refuses to participate, etc.)
- **DO NOT** sample from outside hose spigots or utility sinks.
  - For residential sites, samples **MUST BE** collected from kitchen or bathroom taps typically used for consumption. For non-residential sites, samples **MUST BE** collected from taps typically used for consumption.
- Samples **MAY NOT** be taken from taps that have point of use or point of entry treatment devices designed to remove inorganic contaminants, such as an iron removal filter, reverse osmosis system, or water softener.

Lead and Copper Sampling Pool Form Instructions

Water Supply Name, WSSN, and County: Enter your water supply information.

Standard Number of Sites Required: Enter the standard number of sites you are required to sample based on your population.

Reduced Number of Sites Required: Enter the number of sites you would be required to sample if the MDEQ reduces your monitoring.

People Served	Standard Sites	Reduced Sites
More than 100,000	100	50
10,001 to 100,000	60	30
3,301 to 10,000	40	20
501 to 3,300	20	10
101 to 500	10	5
Fewer than 101	5	5

Address: Enter the street number or other unique identifier (such as lot or unit number) of the sampling site and include the city if the water utility services multiple cities.

Tier, Category, and Structure Type: Enter the appropriate codes from the table below in the Tier, Category, and Structure Type columns to identify the selection criteria for each site.

Tier	Category	Structure Type	Description
Tier 1	A	SFR	Single Family Residence (SFR) with lead service line
	B	SFR	SFR with interior lead plumbing
	C	MFR	Multi-family Residence (MFR) if MFRs comprise at least 20% of total service connections
Tier 2	D	MFR or BLDG	MFR or other building (BLDG) with lead service line
	E	MFR or BLDG	MFR or other BLDG with interior lead plumbing
Tier 3	F	SFR	SFR with copper plumbing with lead solder installed before 1988
Other	OT	SFR, MFR, Or BLDG	If no Tier 1, 2, 3 sites, use sites representative of plumbing commonly found throughout the supply

Service Line and Interior Plumbing Material: Enter the appropriate codes from the table below in the Service Line Material and Interior Plumbing Material columns.

Material		
L	=	Lead
CLS	=	Copper with lead solder installed before July 1988
C	=	Copper installed after July 1988
G	=	Galvanized
P	=	Plastic

RECEIVED
Aug 27 2020
EGLE-DWEHD-CWSS-LCU

Site Validation Method: Enter method used to verify site information (permit records, visual inspection, etc.).

NOTE: It is **highly recommended** that the plan contains more sites than are required for standard monitoring. For example, if the standard number of required sampling sites is 10, list 5 or more additional, appropriately tiered sites that may be used as an alternate if an original site is unavailable.

MICHIGAN DEPARTMENT OF ENVIRONMENTAL QUALITY
DRINKING WATER AND MUNICIPAL ASSISTANCE DIVISION

SAMPLING PLAN – LEAD AND COPPER

Issued under authority of the Michigan Safe Drinking Water Act, 1976 PA 399, and Administrative Rules, as amended. Administrative Rule R 325.10710a requires a water supply to monitor for lead and copper according to a pool of targeted sampling sites in accordance with designated site selection criteria. Complete and submit this form to MDEQ.

Use additional pages for water supplies requiring more sampling sites.
***Assumed based upon City Assessor's record for year home was constructed (<1945 Galv; 1945<1988 CLS)**
****Assumed to be same as Service Line Material**

NOTE: Sampling site 200 Boughey was removed from the previous sampling pool since it was determined that an in-house water treatment system was installed that cannot be bypassed to obtain an untreated sample.

MICHIGAN DEPARTMENT OF ENVIRONMENTAL QUALITY
DRINKING WATER AND MUNICIPAL ASSISTANCE DIVISION

SAMPLING PLAN – LEAD AND COPPER

Issued under authority of the Michigan Safe Drinking Water Act, 1976 PA 399, and Administrative Rules, as amended. Administrative Rule R 325.10710a requires a water supply to monitor for lead and copper according to a pool of targeted sampling sites in accordance with designated site selection criteria. Complete and submit this form to MDEQ.

Use additional pages for water supplies requiring more sampling sites.

Michigan Lead and Copper Rule
Lead and Copper Tap Sample Site Selection Criteria

Community water supplies must identify a pool of lead and copper sampling sites containing **AT LEAST** the number of sites necessary to conduct **STANDARD** monitoring (see instructions for number of required sites). It is highly recommended that the sampling pool contain more sites than required in case routine sites are unavailable at time of sampling. The sampling pool must target high risk sites using the criteria below.

- **Samples must be collected from Tier 1 sites, unless …**
- insufficient Tier 1 sampling sites are available, then **Tier 2** sites must be used, unless …
- insufficient Tier 1 and Tier 2 sampling sites are available, then **Tier 3** sites must be used.
- If no Tier 1, 2, or 3 sites are available, sampling sites must be representative of plumbing materials typically found throughout the water system.

TIER 1 SITES - Single family residences with either: o Lead service lines (LSL)* o Interior lead plumbing Multiple family residences (MFR) with LSLs or interior lead plumbing may be used as Tier 1 sites when MFR comprise at least 20 percent of the total service connections.
TIER 2 SITES – Other buildings or multiple family residences with either: o Lead service lines* o Interior lead plumbing
TIER 3 SITES - Single family residences with: o Copper plumbing with lead solder installed before July 1988
OTHER SITES o Sites representative of plumbing materials commonly found throughout the water supply.
*** Priority should be placed on sites with full LSLs, followed by partial LSLs, followed by lead goosenecks or pigtails.**

Also Note:

- Each round of sampling should be conducted at the **SAME** sampling sites unless …
  - a site no longer meets tiering criteria (for example, a site is no longer Tier 1 after having the lead service line replaced); or
  - a site is unavailable (for example, a site has no water service, resident refuses to participate, etc.)
- **DO NOT** sample from outside hose spigots or utility sinks.
  - For residential sites, samples **MUST BE** collected from kitchen or bathroom taps typically used for consumption. For non-residential sites, samples **MUST BE** collected from taps typically used for consumption.
- Samples **MAY NOT** be taken from taps that have point of use or point of entry treatment devices designed to remove inorganic contaminants, such as an iron removal filter, reverse osmosis system, or water softener.

Lead and Copper Sampling Pool Form Instructions

Water Supply Name, WSSN, and County: Enter your water supply information.

Standard Number of Sites Required: Enter the standard number of sites you are required to sample based on your population.

Reduced Number of Sites Required: Enter the number of sites you would be required to sample if the MDEQ reduces your monitoring.

People Served	Standard Sites	Reduced Sites
More than 100,000	100	50
10,001 to 100,000	60	30
3,301 to 10,000	40	20
501 to 3,300	20	10
101 to 500	10	5
Fewer than 101	5	5

Address: Enter the street number or other unique identifier (such as lot or unit number) of the sampling site and include the city if the water utility services multiple cities.

Tier, Category, and Structure Type: Enter the appropriate codes from the table below in the Tier, Category, and Structure Type columns to identify the selection criteria for each site.

Tier	Category	Structure Type	Description
Tier 1	A	SFR	Single Family Residence (SFR) with lead service line
	B	SFR	SFR with interior lead plumbing
	C	MFR	Multi-family Residence (MFR) if MFRs comprise at least 20% of total service connections
Tier 2	D	MFR or BLDG	MFR or other building (BLDG) with lead service line
	E	MFR or BLDG	MFR or other BLDG with interior lead plumbing
Tier 3	F	SFR	SFR with copper plumbing with lead solder installed before 1988
Other	OT	SFR, MFR, Or BLDG	If no Tier 1, 2, 3 sites, use sites representative of plumbing commonly found throughout the supply

Service Line and Interior Plumbing Material: Enter the appropriate codes from the table below in the Service Line Material and Interior Plumbing Material columns.

Material		
L	=	Lead
CLS	=	Copper with lead solder installed before July 1988
C	=	Copper installed after July 1988
G	=	Galvanized
P	=	Plastic

RECEIVED
Aug 25 2020
EGLE-DWEHD-CWSS-LCU

Site Validation Method: Enter method used to verify site information (permit records, visual inspection, etc.).

NOTE: It is **highly recommended** that the plan contains more sites than are required for standard monitoring. For example, if the standard number of required sampling sites is 10, list 5 or more additional, appropriately tiered sites that may be used as an alternate if an original site is unavailable.

SAMPLING PLAN – LEAD AND COPPER

Issued under authority of the Michigan Safe Drinking Water Act, 1976 PA 399, and Administrative Rules, as amended. Administrative Rule R 325.10710a requires a water supply to monitor for lead and copper according to a pool of targeted sampling sites in accordance with designated site selection criteria. Complete and submit this form to MDEQ.

MICHIGAN COMMUNITY WATER SUPPLY LEAD AND COPPER TAP SAMPLING POOL (cont.)

WSSN: _____ **Supply Name:** _____ **Page** _____ **of** _____

Site No.	Address	Tier Level	Category	Structure Type	Service Line Material	Interior Plumbing Material	Site Validation Method
00	*Ex: 0000 Any Street – Any Town, MI*	*1*	*A*	*SFR*	*L*	*C*	*Visual*

Use additional pages for water supplies requiring more sampling sites.

Michigan Lead and Copper Rule
Lead and Copper Tap Sample Site Selection Criteria

Community water supplies must identify a pool of lead and copper sampling sites containing **AT LEAST** the number of sites necessary to conduct **STANDARD** monitoring (see instructions for number of required sites). It is highly recommended that the sampling pool contain more sites than required in case routine sites are unavailable at time of sampling. The sampling pool must target high risk sites using the criteria below.

- **Samples must be collected from Tier 1 sites, unless …**
- insufficient Tier 1 sampling sites are available, then **Tier 2** sites must be used, unless …
- insufficient Tier 1 and Tier 2 sampling sites are available, then **Tier 3** sites must be used.
- If no Tier 1, 2, or 3 sites are available, sampling sites must be representative of plumbing materials typically found throughout the water system.

TIER 1 SITES - Single family residences with either: o Lead service lines (LSL)* o Interior lead plumbing Multiple family residences (MFR) with LSLs or interior lead plumbing may be used as Tier 1 sites when MFR comprise at least 20 percent of the total service connections.
TIER 2 SITES – Other buildings or multiple family residences with either: o Lead service lines* o Interior lead plumbing
TIER 3 SITES - Single family residences with: o Copper plumbing with lead solder installed before July 1988
OTHER SITES o Sites representative of plumbing materials commonly found throughout the water supply.
*** Priority should be placed on sites with full LSLs, followed by partial LSLs, followed by lead goosenecks or pigtails.**

Also Note:

- Each round of sampling should be conducted at the **SAME** sampling sites unless …
  - a site no longer meets tiering criteria (for example, a site is no longer Tier 1 after having the lead service line replaced); or
  - a site is unavailable (for example, a site has no water service, resident refuses to participate, etc.)
- **DO NOT** sample from outside hose spigots or utility sinks.
  - For residential sites, samples **MUST BE** collected from kitchen or bathroom taps typically used for consumption. For non-residential sites, samples **MUST BE** collected from taps typically used for consumption.
- Samples **MAY NOT** be taken from taps that have point of use or point of entry treatment devices designed to remove inorganic contaminants, such as an iron removal filter, reverse osmosis system, or water softener.

Lead and Copper Sampling Pool Form Instructions

Water Supply Name, WSSN, and County: Enter your water supply information.

Standard Number of Sites Required: Enter the standard number of sites you are required to sample based on your population.

Reduced Number of Sites Required: Enter the number of sites you would be required to sample if the MDEQ reduces your monitoring.

People Served	Standard Sites	Reduced Sites
More than 100,000	100	50
10,001 to 100,000	60	30
3,301 to 10,000	40	20
501 to 3,300	20	10
101 to 500	10	5
Fewer than 101	5	5

Address: Enter the street number or other unique identifier (such as lot or unit number) of the sampling site and include the city if the water utility services multiple cities.

Tier, Category, and Structure Type: Enter the appropriate codes from the table below in the Tier, Category, and Structure Type columns to identify the selection criteria for each site.

Tier	Category	Structure Type	Description
Tier 1	A	SFR	Single Family Residence (SFR) with lead service line
	B	SFR	SFR with interior lead plumbing
	C	MFR	Multi-family Residence (MFR) if MFRs comprise at least 20% of total service connections
Tier 2	D	MFR or BLDG	MFR or other building (BLDG) with lead service line
	E	MFR or BLDG	MFR or other BLDG with interior lead plumbing
Tier 3	F	SFR	SFR with copper plumbing with lead solder installed before 1988
Other	OT	SFR, MFR, Or BLDG	If no Tier 1, 2, 3 sites, use sites representative of plumbing commonly found throughout the supply

Service Line and Interior Plumbing Material: Enter the appropriate codes from the table below in the Service Line Material and Interior Plumbing Material columns.

Material		
L	=	Lead
CLS	=	Copper with lead solder installed before July 1988
C	=	Copper installed after July 1988
G	=	Galvanized
P	=	Plastic

Site Validation Method: Enter method used to verify site information (permit records, visual inspection, etc.).

NOTE: It is **highly recommended** that the plan contains more sites than are required for standard monitoring. For example, if the standard number of required sampling sites is 10, list 5 or more additional, appropriately tiered sites that may be used as an alternate if an original site is unavailable.

Michigan Lead and Copper Rule
Lead and Copper Tap Sample Site Selection Criteria

Community water supplies must identify a pool of lead and copper sampling sites containing **AT LEAST** the number of sites necessary to conduct **STANDARD** monitoring (see instructions for number of required sites). It is highly recommended that the sampling pool contain more sites than required in case routine sites are unavailable at time of sampling. The sampling pool must target high risk sites using the criteria below.

- **Samples must be collected from Tier 1 sites, unless ...**
- insufficient Tier 1 sampling sites are available, then **Tier 2** sites must be used, unless ...
- insufficient Tier 1 and Tier 2 sampling sites are available, then **Tier 3** sites must be used.
- If no Tier 1, 2, or 3 sites are available, sampling sites must be representative of plumbing materials typically found throughout the water system.

TIER 1 SITES - Single family residences with either: o Lead service lines (LSL)* o Interior lead plumbing Multiple family residences (MFR) with LSLs or interior lead plumbing may be used as Tier 1 sites when MFR comprise at least 20 percent of the total service connections.
TIER 2 SITES – Other buildings or multiple family residences with either: o Lead service lines* o Interior lead plumbing
TIER 3 SITES - Single family residences with: o Copper plumbing with lead solder installed before July 1988
OTHER SITES o Sites representative of plumbing materials commonly found throughout the water supply.
*** Priority should be placed on sites with full LSLs, followed by partial LSLs, followed by lead goosenecks or pigtails.**

Also Note:

- Each round of sampling should be conducted at the **SAME** sampling sites unless ...
  - a site no longer meets tiering criteria (for example, a site is no longer Tier 1 after having the lead service line replaced); or
  - a site is unavailable (for example, a site has no water service, resident refuses to participate, etc.)
- **DO NOT** sample from outside hose spigots or utility sinks.
  - For residential sites, samples **MUST BE** collected from kitchen or bathroom taps typically used for consumption. For non-residential sites, samples **MUST BE** collected from taps typically used for consumption.
- Samples **MAY NOT** be taken from taps that have point of use or point of entry treatment devices designed to remove inorganic contaminants, such as an iron removal filter, reverse osmosis system, or water softener.

Lead and Copper Sampling Pool Form Instructions

Water Supply Name, WSSN, and County: Enter your water supply information.

Standard Number of Sites Required: Enter the standard number of sites you are required to sample based on your population.

Reduced Number of Sites Required: Enter the number of sites you would be required to sample if the MDEQ reduces your monitoring.

People Served	Standard Sites	Reduced Sites
More than 100,000	100	50
10,001 to 100,000	60	30
3,301 to 10,000	40	20
501 to 3,300	20	10
101 to 500	10	5
Fewer than 101	5	5

Address: Enter the street number or other unique identifier (such as lot or unit number) of the sampling site and include the city if the water utility services multiple cities.

Tier, Category, and Structure Type: Enter the appropriate codes from the table below in the Tier, Category, and Structure Type columns to identify the selection criteria for each site.

Tier	Category	Structure Type	Description
Tier 1	A	SFR	Single Family Residence (SFR) with lead service line
	B	SFR	SFR with interior lead plumbing
	C	MFR	Multi-family Residence (MFR) if MFRs comprise at least 20% of total service connections
Tier 2	D	MFR or BLDG	MFR or other building (BLDG) with lead service line
	E	MFR or BLDG	MFR or other BLDG with interior lead plumbing
Tier 3	F	SFR	SFR with copper plumbing with lead solder installed before 1988
Other	OT	SFR, MFR, Or BLDG	If no Tier 1, 2, 3 sites, use sites representative of plumbing commonly found throughout the supply

Service Line and Interior Plumbing Material: Enter the appropriate codes from the table below in the Service Line Material and Interior Plumbing Material columns.

Material		
L	=	Lead
CLS	=	Copper with lead solder installed before July 1988
C	=	Copper installed after July 1988
G	=	Galvanized
P	=	Plastic

Site Validation Method: Enter method used to verify site information (permit records, visual inspection, etc.).

NOTE: It is **highly recommended** that the plan contains more sites than are required for standard monitoring. For example, if the standard number of required sampling sites is 10, list 5 or more additional, appropriately tiered sites that may be used as an alternate if an original site is unavailable.

MICHIGAN DEPARTMENT OF ENVIRONMENTAL QUALITY
DRINKING WATER AND MUNICIPAL ASSISTANCE DIVISION

SAMPLING PLAN – LEAD AND COPPER

Issued under authority of the Michigan Safe Drinking Water Act, 1976 PA 399, and Administrative Rules, as amended. Administrative Rule R 325.10710a requires a water supply to monitor for lead and copper according to a pool of targeted sampling sites in accordance with designated site selection criteria. Complete and submit this form to MDEQ.

Michigan Lead and Copper Rule
Lead and Copper Tap Sample Site Selection Criteria

Community water supplies must identify a pool of lead and copper sampling sites containing **AT LEAST** the number of sites necessary to conduct **STANDARD** monitoring (see instructions for number of required sites). It is highly recommended that the sampling pool contain more sites than required in case routine sites are unavailable at time of sampling. The sampling pool must target high risk sites using the criteria below.

- **Samples must be collected from Tier 1 sites, unless ...**
- insufficient Tier 1 sampling sites are available, then **Tier 2** sites must be used, unless ...
- insufficient Tier 1 and Tier 2 sampling sites are available, then **Tier 3** sites must be used.
- If no Tier 1, 2, or 3 sites are available, sampling sites must be representative of plumbing materials typically found throughout the water system.

TIER 1 SITES - Single family residences with either: o Lead service lines (LSL)* o Interior lead plumbing Multiple family residences (MFR) with LSLs or interior lead plumbing may be used as Tier 1 sites when MFR comprise at least 20 percent of the total service connections.
TIER 2 SITES – Other buildings or multiple family residences with either: o Lead service lines* o Interior lead plumbing
TIER 3 SITES - Single family residences with: o Copper plumbing with lead solder installed before July 1988
OTHER SITES o Sites representative of plumbing materials commonly found throughout the water supply.
*** Priority should be placed on sites with full LSLs, followed by partial LSLs, followed by lead goosenecks or pigtails.**

Also Note:

- Each round of sampling should be conducted at the **SAME** sampling sites unless ...
  - a site no longer meets tiering criteria (for example, a site is no longer Tier 1 after having the lead service line replaced); or
  - a site is unavailable (for example, a site has no water service, resident refuses to participate, etc.)
- **DO NOT** sample from outside hose spigots or utility sinks.
  - For residential sites, samples **MUST BE** collected from kitchen or bathroom taps typically used for consumption. For non-residential sites, samples **MUST BE** collected from taps typically used for consumption.
- Samples **MAY NOT** be taken from taps that have point of use or point of entry treatment devices designed to remove inorganic contaminants, such as an iron removal filter, reverse osmosis system, or water softener.

Lead and Copper Sampling Pool Form Instructions

Water Supply Name, WSSN, and County: Enter your water supply information.

Standard Number of Sites Required: Enter the standard number of sites you are required to sample based on your population.

Reduced Number of Sites Required: Enter the number of sites you would be required to sample if the MDEQ reduces your monitoring.

People Served	Standard Sites	Reduced Sites
More than 100,000	100	50
10,001 to 100,000	60	30
3,301 to 10,000	40	20
501 to 3,300	20	10
101 to 500	10	5
Fewer than 101	5	5

Address: Enter the street number or other unique identifier (such as lot or unit number) of the sampling site and include the city if the water utility services multiple cities.

Tier, Category, and Structure Type: Enter the appropriate codes from the table below in the Tier, Category, and Structure Type columns to identify the selection criteria for each site.

Tier	Category	Structure Type	Description
Tier 1	A	SFR	Single Family Residence (SFR) with lead service line
	B	SFR	SFR with interior lead plumbing
	C	MFR	Multi-family Residence (MFR) if MFRs comprise at least 20% of total service connections
Tier 2	D	MFR or BLDG	MFR or other building (BLDG) with lead service line
	E	MFR or BLDG	MFR or other BLDG with interior lead plumbing
Tier 3	F	SFR	SFR with copper plumbing with lead solder installed before 1988
Other	OT	SFR, MFR, Or BLDG	If no Tier 1, 2, 3 sites, use sites representative of plumbing commonly found throughout the supply

Service Line and Interior Plumbing Material: Enter the appropriate codes from the table below in the Service Line Material and Interior Plumbing Material columns.

Material		
L	=	Lead
CLS	=	Copper with lead solder installed before July 1988
C	=	Copper installed after July 1988
G	=	Galvanized
P	=	Plastic

Site Validation Method: Enter method used to verify site information (permit records, visual inspection, etc.).

NOTE: It is **highly recommended** that the plan contains more sites than are required for standard monitoring. For example, if the standard number of required sampling sites is 10, list 5 or more additional, appropriately tiered sites that may be used as an alternate if an original site is unavailable.

Michigan Lead and Copper Rule
Lead and Copper Tap Sample Site Selection Criteria

Community water supplies must identify a pool of lead and copper sampling sites containing **AT LEAST** the number of sites necessary to conduct **STANDARD** monitoring (see instructions for number of required sites). It is highly recommended that the sampling pool contain more sites than required in case routine sites are unavailable at time of sampling. The sampling pool must target high risk sites using the criteria below.

- **Samples must be collected from Tier 1 sites, unless …**
- insufficient Tier 1 sampling sites are available, then **Tier 2** sites must be used, unless …
- insufficient Tier 1 and Tier 2 sampling sites are available, then **Tier 3** sites must be used.
- If no Tier 1, 2, or 3 sites are available, sampling sites must be representative of plumbing materials typically found throughout the water system.

TIER 1 SITES - Single family residences with either: o Lead service lines (LSL)* o Interior lead plumbing Multiple family residences (MFR) with LSLs or interior lead plumbing may be used as Tier 1 sites when MFR comprise at least 20 percent of the total service connections.
TIER 2 SITES – Other buildings or multiple family residences with either: o Lead service lines* o Interior lead plumbing
TIER 3 SITES - Single family residences with: o Copper plumbing with lead solder installed before July 1988
OTHER SITES o Sites representative of plumbing materials commonly found throughout the water supply.
*** Priority should be placed on sites with full LSLs, followed by partial LSLs, followed by lead goosenecks or pigtails.**

Also Note:

- Each round of sampling should be conducted at the **SAME** sampling sites unless …
  - a site no longer meets tiering criteria (for example, a site is no longer Tier 1 after having the lead service line replaced); or
  - a site is unavailable (for example, a site has no water service, resident refuses to participate, etc.)
- **DO NOT** sample from outside hose spigots or utility sinks.
  - For residential sites, samples **MUST BE** collected from kitchen or bathroom taps typically used for consumption. For non-residential sites, samples **MUST BE** collected from taps typically used for consumption.
- Samples **MAY NOT** be taken from taps that have point of use or point of entry treatment devices designed to remove inorganic contaminants, such as an iron removal filter, reverse osmosis system, or water softener.

Lead and Copper Sampling Pool Form Instructions

Water Supply Name, WSSN, and County: Enter your water supply information.

Standard Number of Sites Required: Enter the standard number of sites you are required to sample based on your population.

Reduced Number of Sites Required: Enter the number of sites you would be required to sample if the MDEQ reduces your monitoring.

People Served	Standard Sites	Reduced Sites
More than 100,000	100	50
10,001 to 100,000	60	30
3,301 to 10,000	40	20
501 to 3,300	20	10
101 to 500	10	5
Fewer than 101	5	5

Address: Enter the street number or other unique identifier (such as lot or unit number) of the sampling site and include the city if the water utility services multiple cities.

Tier, Category, and Structure Type: Enter the appropriate codes from the table below in the Tier, Category, and Structure Type columns to identify the selection criteria for each site.

Tier	Category	Structure Type	Description
Tier 1	A	SFR	Single Family Residence (SFR) with lead service line
	B	SFR	SFR with interior lead plumbing
	C	MFR	Multi-family Residence (MFR) if MFRs comprise at least 20% of total service connections
Tier 2	D	MFR or BLDG	MFR or other building (BLDG) with lead service line
	E	MFR or BLDG	MFR or other BLDG with interior lead plumbing
Tier 3	F	SFR	SFR with copper plumbing with lead solder installed before 1988
Other	OT	SFR, MFR, Or BLDG	If no Tier 1, 2, 3 sites, use sites representative of plumbing commonly found throughout the supply

Service Line and Interior Plumbing Material: Enter the appropriate codes from the table below in the Service Line Material and Interior Plumbing Material columns.

Material		
L	=	Lead
CLS	=	Copper with lead solder installed before July 1988
C	=	Copper installed after July 1988
G	=	Galvanized
P	=	Plastic

Site Validation Method: Enter method used to verify site information (permit records, visual inspection, etc.).

NOTE: It is **highly recommended** that the plan contains more sites than are required for standard monitoring. For example, if the standard number of required sampling sites is 10, list 5 or more additional, appropriately tiered sites that may be used as an alternate if an original site is unavailable.

MICHIGAN DEPARTMENT OF ENVIRONMENTAL QUALITY
DRINKING WATER AND MUNICIPAL ASSISTANCE DIVISION

SAMPLING PLAN – LEAD AND COPPER

Issued under authority of the Michigan Safe Drinking Water Act, 1976 PA 399, and Administrative Rules, as amended. Administrative Rule R 325.10710a requires a water supply to monitor for lead and copper according to a pool of targeted sampling sites in accordance with designated site selection criteria. Complete and submit this form to MDEQ.

MICHIGAN DEPARTMENT OF ENVIRONMENT, GREAT LAKES, AND ENERGY
DRINKING WATER AND ENVIRONMENTAL HEALTH DIVISION

LEAD AND COPPER REPORT AND CONSUMER NOTICE FOR COMMUNITY WATER SUPPLY FORM A – SUPPLIES WITH LEAD SERVICE LINES

Issued under authority of the Michigan Safe Drinking Water Act, 1976 PA 399, as amended (Act 399), MCL 325.1001 et seq., and the Administrative Rules.
Failure to submit this information is a violation of Act 399 and may subject the water supply to enforcement penalties.

Administrative Rule R 325.10710d requires water supplies to report lead and copper monitoring information within ten days after the end of the monitoring period. This form may be used to meet this requirement. Form instructions are available on pages 8 - 10. Submit the information to the appropriate Michigan Department of Environment, Great Lakes, and Energy (EGLE) district office.

1. Supply Name: City of Flint
2. County: Genesee 3. WSSN: **2310**
4. Population: 96448 5. Monitoring Period: 01/01/2020 To: 06/30/2020
6. Minimum # of Samples Required: 60 7. # of Samples Taken: 120
8. Name of Certified Laboratory: State of Michigan Lab

9. SAMPLE CRITERIA:

This form is for water supplies collecting *some* or *all* lead and copper samples from sites WITH LEAD SERVICE LINES. All other supplies should use Form B.

Yes	No		
☒		Are some or all samples from sites WITH lead service lines? If no sites served by a lead service line, STOP and use Form B.	For more information see *Instructions* item 11 "Tier and Sample Category" at the end of the document.
☒	☐	Did you prioritize sample collection according to the following: • Tier 1 sites must be used unless insufficient Tier 1 sites available. • If insufficient Tier 1 sites available, then Tier 2 sites must be used. • If insufficient Tier 2 sites, then Tier 3 sites must be used. • If no Tier 1, 2, or 3 sites are available, sites must be representative of plumbing materials typically found throughout the water system.	
☐	☒	Were the same sampling sites used as in the previous monitoring period? **If no, explain** (attach additional pages if needed): Lead lines are being replaced soon after they are identified.

CONSUMER NOTICE OF LEAD AND COPPER RESULTS REQUIREMENTS AND CERTIFICATION

Each community water supply must deliver a Consumer Notice of Lead and Copper Results (Consumer Notice) to the occupants at each location sampled within 30 days of learning the sample results as required under R 325.10410(5) of the administrative rules promulgated under the Michigan Safe Drinking Water Act, 1976 PA 399, as amended. Failure to deliver the Consumer Notice to each location on time will result in a reporting violation.

Instructions:

A. Use the Consumer Notice Form A template for sites with lead service lines or Consumer Notice Form B template for sites without lead service lines. See the examples on Page 10 to document results from both sites with a lead service line and without a lead service line.

B. Complete one Consumer Notice for each home or building that was sampled. MAKE SURE UNITS ARE CORRECT BEFORE DISTRIBUTING TO CONSUMERS.

   Note: 1 mg/L = 1 ppm = 1,000 ppb Example: 0.002 mg/L = 0.002 ppm = 2 ppb

C. Mail or hand deliver each Consumer Notice to the corresponding home or building sampled.

D. Water supplies have 90 days after the end of the monitoring period to submit a sample copy of the Consumer Notice along with a signed certification that notices have been distributed as required under R 325.10710d(f)(3) to the appropriate EGLE district office. When possible, EGLE encourages water supplies to send the sample Consumer Notice and certification (page 4 of this document) along with the Lead and Copper Report (pages 1 and 2 of this document), which is due within ten days after the end of the monitoring period. Please COMPLETE all forms accurately to avoid resubmittal.

Certification:

I hereby certify that the Consumer Notice of Lead and Copper Results (Consumer Notice) has been provided to persons served at each of the taps that were tested, including all the following information:

- Delivery was by mail, hand delivery, or another method approved by EGLE.
- Delivery was within 30 days of knowing the result.
- Consumer Notice includes required content:
  - The results of lead and copper tap monitoring for the site that was sampled.
  - An explanation of the health effects of lead and copper.
  - Steps consumers can take to reduce exposure to lead in drinking water.
  - Contact information for the public water supply.
  - The maximum contaminant level goal and the action level for lead and copper with the definitions explaining each.

*Please **initial** each line verifying that each requirement was completed:*

__x__ A Consumer Notice was sent to persons served at each of the taps that were tested.

__x__ Delivery was by mail, hand delivery, or another method approved by EGLE.

__x__ Each Consumer Notice was delivered to the resident within 30 days of knowing the results.

__x__ Each Consumer Notice included the required content as stated above.

__x__ A sample copy of a Consumer Notice sent to a resident is attached.

CONSUMER NOTICE OF LEAD AND COPPER RESULTS IN DRINKING WATER SITE WITH A LEAD SERVICE LINE

Water Supply Name:	City of Flint		
County:	Genesee	WSSN:	**2310**
Sample Location:	2110 Martin Luther King	Date Sampled:	**06/16/2020**

Thank you for participating in the lead and copper monitoring of drinking water. The levels of lead and copper found at your location are in the table below. Your home is served by a lead service line. This means that the pipe that brings water to your home contains lead. The first liter sample represents the water you are likely to drink when turning on the tap, and the fifth liter sample likely represents the water in the service line.

Contaminant	Action Level	Maximum Contaminant Level Goal	1st Liter Result	5th Liter Result
Lead (ppb)	15	0	1	2
Copper (ppb)	1300	1300	0	2

Action Level (AL): The concentration of a contaminant which, if exceeded, triggers treatment or other requirements that a water system must follow.
Maximum Contaminant Level Goal (MCLG): The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.
ppb: Parts per billion or micrograms per liter.
ND: Not detected.

To reduce exposure to lead and copper in drinking water:

- **Run your water before drinking**. The more time water has been sitting in your home's pipes, the more lead it may contain. Therefore, if your water has not been used for several hours, run the water before using it for drinking or cooking. This flushes lead-containing water from the pipes. Additional flushing may be required for homes that have been vacant or have a longer service line.
    - If you **do not** have a lead service line, run the water for 30 seconds to two minutes, or until it becomes cold or reaches a steady temperature.
    - If you **do** have a lead service line, run the water for at least five minutes to flush water from both the interior building plumbing and the lead service line.
- **Use cold water for drinking, cooking, and preparing baby formula**. Do not cook with or drink water from the hot water tap. Lead and copper dissolves more easily in hot water.
- **Do not boil water to remove lead and copper**. Boiling water will not reduce lead and copper levels.
- **Consider using a filter to reduce lead in drinking water**. Read the package to be sure the filter is NSF 53 certified to reduce lead or contact NSF International at 800-NSF-8010, or www.nsf.org for more information.
- **Consider purchasing bottled water**. The bottled water standard for lead is 5 ppb.
- **Identify older plumbing fixtures that likely contain lead**. Older faucets, fittings, and valves sold before 2014 may contain higher levels of lead, even if marked "lead-free." Faucets, fittings, and valves sold after January 2014 are required to meet a more restrictive "lead-free" definition but may still contain up to 0.25 percent lead.
- **Clean your aerator**. As part of routine maintenance, the aerator should be removed at least every six months to rinse out any debris that may include particulate lead.
- **Get your child tested**. Contact your local health department or healthcare provider to find out how you can get your child tested for lead if you are concerned about exposure.

Lead *can cause serious health and developmental problems. It can cause damage to the brain and kidneys, and it can interfere with the production of red blood cells that carry oxygen to all parts of your body. The greatest risk of lead exposure is to infants, young children, and pregnant women. Scientists have linked the effects of lead on the brain with lowered IQ in children. Adults with kidney problems and high blood pressure can be affected by low levels of lead more than healthy adults. Lead is stored in the bones, and it can be released later in life. During pregnancy, the child receives lead from the mother's bones, which may affect brain development. Although other sources of lead exposure exist, such as lead paint, and lead contaminated dust, your water supply is contacting you to reduce your risk of exposure to lead in drinking water. If you have questions about other sources of lead exposure, please contact your local health department.*

Copper *is an essential nutrient, but some people who drink water containing copper in excess of the action level over a relatively short amount of time could experience gastrointestinal distress. Some people who drink water containing copper in excess of the action level over many years could suffer liver or kidney damage. People with Wilson's Disease should consult their personal doctor.*

The United States Environmental Protection Agency (U.S. EPA) estimates that 20 percent or more of human exposure to lead may come from drinking water. Infants who consume mostly mixed formula can receive 40 percent to 60 percent of their exposure to lead from drinking water.

For more information on reducing lead exposure around your home and the health effects of lead, visit the U.S. EPA's website at www.epa.gov/lead, call the National Lead Information Center at 800-424-LEAD, or contact your health care provider.

For more information on copper, visit the United States Center for Disease Control website at www.atsdr.cdc.gov/index.html, or contact your health provider.

For more information regarding your water supply, contact us at: 810.787.6537

Department of Utilities

FLINT WATER PLANT

F&V operations and resource management

The City of Flint and F&V Operations and Resource Management are submitting the following report(s) to Michigan Department of Environment, Great Lakes and Energy:

Lead + Copper Report H2 2020

"I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the persons or persons who manage the system or those persons directly responsible for gathering such information, the information submitted is to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

City of Flint Representative: _____

Signature: _____ Date: _____

F&V Operations Representative: Robert Jones

Signature: _____ Date: 1/7/2021

MICHIGAN DEPARTMENT OF ENVIRONMENT, GREAT LAKES, AND ENERGY
DRINKING WATER AND ENVIRONMENTAL HEALTH DIVISION

LEAD AND COPPER REPORT AND CONSUMER NOTICE FOR COMMUNITY WATER SUPPLY FORM A – SUPPLIES WITH LEAD SERVICE LINES

Issued under authority of the Michigan Safe Drinking Water Act, 1976 PA 399, as amended (Act 399), MCL 325.1001 et seq., and the Administrative Rules.
Failure to submit this information is a violation of Act 399 and may subject the water supply to enforcement penalties.

Administrative Rule R 325.10710d requires water supplies to report lead and copper monitoring information within ten days after the end of the monitoring period. This form may be used to meet this requirement. Form instructions are available on pages 8 - 10. Submit the information to the appropriate Michigan Department of Environment, Great Lakes, and Energy (EGLE) district office.

1. Supply Name: City of Flint
2. County: Genesee 3. WSSN: 2310
4. Population: 95,943 5. Monitoring Period: From: 7/01/220 To: 12/31/2020
6. Minimum # of Samples Required: 60 7. # of Samples Taken: 174
8. Name of Certified Laboratory: State of Michigan

9. SAMPLE CRITERIA:

This form is for water supplies collecting *some* or *all* lead and copper samples from sites WITH LEAD SERVICE LINES. All other supplies should use Form B.

Yes	No		
☒		Are some or all samples from sites WITH lead service lines? If no sites served by a lead service line, STOP and use Form B.	For more information see *Instructions* item 11 "Tier and Sample Category" at the end of the document.
☒	☐	Did you prioritize sample collection according to the following: • Tier 1 sites must be used unless insufficient Tier 1 sites available. • If insufficient Tier 1 sites available, then Tier 2 sites must be used. • If insufficient Tier 2 sites, then Tier 3 sites must be used. • If no Tier 1, 2, or 3 sites are available, sites must be representative of plumbing materials typically found throughout the water system.	
☐	☒	Were the same sampling sites used as in the previous monitoring period? **If no, explain** (attach additional pages if needed): All previously sampled sites were attempted unless lead service line was replaced.

11. TAP SAMPLING DATA

Use additional sheets as needed. Sheet _____ of _____.

Water Supply Name: WSSN:

Sample Location	Sample Date	Tier (1,2,3,OT)[1]	Category (see below)[2]	Building Plumbing (L,C,CLS, G,P)[3]	Service Line (L*,C,G,P)[3]	Tap Type (K,B)[4]	1st Liter Sample			5th Liter Sample		
							Lead ☐ mg/L ☐ ug/L	Copper ☐ mg/L ☐ ug/L	Lab Sample Number	Lead ☐ mg/L ☐ ug/L	Copper ☐ mg/L ☐ ug/L	Lab Sample Number
See Attached												

[1] Tier	[2] Category	Description
Tier 1	A*	Single Family w/ lead service line
	B	Single Family w/ interior lead plumbing
	C	Multi Family Residence (MFR) w/ a LSL*, or lead interior plumbing, if MFRs comprise at least 20% of total service connections.
	* Use Form A if any samples collected from sites with LSLs to allow reporting of 1st and 5th liter results.	

[1] Tier	[2] Category	Description
Tier 2	D*	Multi Family or building w/ lead service line
	E	Multi Family or building w/ interior lead plumbing
Tier 3	F	Single Family w/ copper plumbing with lead solder installed before 1988
Other	OT	If no Tier 1, 2, 3 sites, use sites representative of plumbing commonly found throughout the supply.

[3] Material	[4] Tap Type
L* = Lead C = Copper CLS = Copper with lead solder G = Galvanized P = Plastic * Use Form A if any samples collected from sites with lead service lines to report 1st and 5th liter results.	K = Kitchen Sink B = Bathroom Sink O = Other (not an option for residential sites)
