Job Notes

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to the NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory. This report is confidential and is intended for the sole use of Eurofins Environment Testing North Central, LLC and its client. All questions regarding this report should be directed to the Eurofins Environment Testing North Central, LLC Project Manager who has signed this report.

Results relate only to the items tested and the sample(s) as received by the laboratory. The results, detection limits (LOD) and Quantitation Limits (LOQ) have been adjusted for sample dilutions and/or solids content.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Chicago Project Manager.

Compliance Statement

The LOD and LOQ reported are adjusted by the dilution factor when a dilution factor greater than 1 is needed. Additionally, where results are indicated as being reported on a dry weight basis, the LOD and LOQ are adjusted for moisture content as well.

Definitions of Limits
- LOD = Limit of Detection = MDL as defined by 40 CFR part 136 Appendix B
- LOQ = Limit of Quantitation = 3.33 x LOD as defined by Wisconsin
- RL = Report Limit = a concentration supported by a standard in the calibration curves

Job Narrative
500-261306-1

Receipt
The samples were received on 12/11/2024 9:25 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 5 coolers at receipt time were 3.5º C, 3.8º C, 4.0º C, 4.2º C and 5.0º C.

Metals
Methods 200.8, 6020B: The following sample was diluted to bring the concentration of target analytes within the calibration range: SMW-1SB_20241209 (500-261306-7). Elevated reporting limits (RLs) are provided.

Method 1638: The continuing calibration blank (CCB) for analytical batch 350-4338 contained Uranium above the reporting limit (RL). All reported samples associated with this CCB were either ND for this analyte or contained this analyte at a concentration greater than 10X the value found in the CCB; therefore, re-analysis of samples was not performed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Field Service / Mobile Lab
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

General Chemistry
Method 300.0: Reanalysis of the following samples was performed outside of the analytical holding time due to failure of quality control parameters in the initial analysis. Reanalysis had confirming results therefore in hold data has been qualified and reported. PNC-03_20241209 (500-261306-1), SMW-1SB_20241209 (500-261306-7), MW-5SB_20241209 (500-261306-9), SMW-1_20241209 (500-261306-11) and EB-01-GW_20241209 (500-261306-13)

Methods 300.0, 9056A: The following samples were received with insufficient time remaining to perform the analysis within holding time: MW-5A_20241209 (500-261306-3), MW-5A_20241209 (500-261306-3[MS]), MW-5A_20241209 (500-261306-3[MSD]) and MW-31_20241209 (500-261306-5).

Method SM 2320B: The method blank for analytical batch 500-799502-799707 contained Alkalinity above the method detection limit. This target analyte concentration was less than the reporting limit (RL) in the method blank; therefore, re-analysis of samples was not performed.

Method 350.1: The matrix spike / matrix spike duplicate (MS/MSD) recoveries and precision for preparation batch 500-800886 and analytical batch 500-800975 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample / laboratory sample control duplicate (LCS/LCSD) precision was within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Qualifiers

Metals

Qualifier	Qualifier Description
^+	Continuing Calibration Verification (CCV) is outside acceptance limits, high biased.
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
B	Compound was found in the blank and sample.
F1	MS and/or MSD recovery exceeds control limits.
F5	Duplicate RPD exceeds limit, and one or both sample results are less than 5 times RL, and the absolute difference between results is < the upper reporting limits for both.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Job Notes

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to the NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory. This report is confidential and is intended for the sole use of Eurofins Environment Testing North Central, LLC and its client. All questions regarding this report should be directed to the Eurofins Environment Testing North Central, LLC Project Manager who has signed this report.

Results relate only to the items tested and the sample(s) as received by the laboratory. The results, detection limits (LOD) and Quantitation Limits (LOQ) have been adjusted for sample dilutions and/or solids content.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Chicago Project Manager.

Compliance Statement

The LOD and LOQ reported are adjusted by the dilution factor when a dilution factor greater than 1 is needed. Additionally, where results are indicated as being reported on a dry weight basis, the LOD and LOQ are adjusted for moisture content as well.

Definitions of Limits
- LOD = Limit of Detection = MDL as defined by 40 CFR part 136 Appendix B
- LOQ = Limit of Quantitation = 3.33 x LOD as defined by Wisconsin
- RL = Report Limit = a concentration supported by a standard in the calibration curves

Job Narrative
500-261422-1

Receipt
The samples were received on 12/13/24 09:20. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 4 coolers at receipt time were -1.8º C, 0.5º C, 1.6º C and 4.5º C.

Receipt Exceptions
Sample #15 received two sets (3 vials each set) for sulfuric. One set had one vial labeled TOC and the other two labeled DOC. Other set all vials labeled DOC. Set with the one TOC vial labeled all as TOC.

The following samples were received outside of holding time: for IC NO2 and NO3. SBW-01_20241210 (500-261422-1), FB-01-GW_20241210 (500-261422-3), MW-3A_20241210 (500-261422-5), MW-3B_20241210 (500-261422-7), MW-2A_20241210 (500-261422-9), MW-2B_20241210 (500-261422-11), SBD-01_20241210 (500-261422-13) and DUP-01-GW_20241210 (500-261422-15)

Metals
Method 1638: The continuing calibration blank (CCB) for analytical batch 350-4338 contained Uranium above the reporting limit (RL). All reported samples associated with this CCB were either ND for this analyte or contained this analyte at a concentration greater than 10X the value found in the CCB; therefore, re-analysis of samples was not performed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Field Service / Mobile Lab
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

General Chemistry
Method 300.0: The following samples were received outside of holding time: SBW-01_20241210 (500-261422-1), FB-01-GW_20241210 (500-261422-3), MW-3A_20241210 (500-261422-5), MW-3B_20241210 (500-261422-7), MW-2A_20241210 (500-261422-9), MW-2B_20241210 (500-261422-11), SBD-01_20241210 (500-261422-13) and DUP-01-GW_20241210 (500-261422-15).

Method 335.4: The matrix spike duplicate (MSD) recoveries for preparation batch 500-799428 and analytical batch 500-799432 were outside control limits. Sample matrix interference is suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method SM 2320B: The method blank for analytical batch 500-799866 contained Alkalinity above the reporting limit (RL). Associated sample(s) were not re-analyzed because results were greater than 10X the value found in the method blank.

Method SM 2320B: The method blank for analytical batch 500-800446 contained Alkalinity and Bicarbonate Alkalinity as CaCO3 above the reporting limit. This target analyte concentration was non-detect in the associated sample; therefore, re-extraction and/or re-analysis of samples was not performed.

Method SM 2320B: The method blank for analytical batch 500-801026 contained Alkalinity above the method detection limit. This target analyte concentration was less than the reporting limit (RL) in the method blank; therefore, re-extraction and/or re-analysis of samples was not performed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Results relate only to the items tested and the sample(s) as received by the laboratory. The results, detection limits (LOD) and Quantitation Limits (LOQ) have been adjusted for sample dilutions and/or solids content.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Chicago Project Manager.

Compliance Statement

The LOD and LOQ reported are adjusted by the dilution factor when a dilution factor greater than 1 is needed. Additionally, where results are indicated as being reported on a dry weight basis, the LOD and LOQ are adjusted for moisture content as well.

Definitions of Limits
- LOD = Limit of Detection = MDL as defined by 40 CFR part 136 Appendix B
- LOQ = Limit of Quantitation = 3.33 x LOD as defined by Wisconsin
- RL = Report Limit = a concentration supported by a standard in the calibration curves

Receipt
The samples were received on 12/13/24 09:20. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 4 coolers at receipt time were 5.4º C, 5.7º C, 5.8º C and 5.8º C.

Receipt Exceptions
Sample #13- total Methyl Hg container lid not fully tighten-about half leaked.

Metals
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Field Service / Mobile Lab
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

General Chemistry
Method 300.0: The following sample was received outside of holding time: ARC-03_20241211 (500-261545-3).

Method 300.0: The following samples were analyzed outside of analytical holding time due to system outages. TBN-01_20241211 (500-261545-7) and TBS-01_20241211 (500-261545-11)

Method SM 2320B: The method blank for analytical batch 500-800446 contained Alkalinity and Bicarbonate Alkalinity as CaCO3 above the reporting limit (RL). Associated sample(s) were not re-extracted and/or re-analyzed because results were greater than 10X the value found in the method blank. The following samples are affected: PRC-01_20241211 (500-261545-1), PTC-01_20241211 (500-261545-5), TBN-01_20241211 (500-261545-7), BNW-01_20241211 (500-261545-9), TBS-01_20241211 (500-261545-11) and (MB 500-800446/53)

Method SM 2320B: The method blank for analytical batch 500-801026 contained Alkalinity above the method detection limit. This target analyte concentration was less than the reporting limit (RL) in the method blank; therefore, re-extraction and/or re-analysis of samples was not performed.

Method 300.0: Spike compounds were inadvertently omitted during the extraction process for the matrix spike/matrix spike duplicate (MS/MSD); therefore, matrix spike recoveries are unavailable for analytical batch 500-801398. The associated laboratory control sample (LCS) met acceptance criteria.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Qualifiers

Metals

Qualifier	Qualifier Description
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

General Chemistry

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
H	Sample was prepped or analyzed beyond the specified holding time. This does not meet regulatory requirements.
H3	Sample was received and analyzed past holding time. This does not meet regulatory requirements.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Results relate only to the items tested and the sample(s) as received by the laboratory. The results, detection limits (LOD) and Quantitation Limits (LOQ) have been adjusted for sample dilutions and/or solids content.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Chicago Project Manager.

Compliance Statement

The LOD and LOQ reported are adjusted by the dilution factor when a dilution factor greater than 1 is needed. Additionally, where results are indicated as being reported on a dry weight basis, the LOD and LOQ are adjusted for moisture content as well.

Definitions of Limits
- LOD = Limit of Detection = MDL as defined by 40 CFR part 136 Appendix B
- LOQ = Limit of Quantitation = 3.33 x LOD as defined by Wisconsin
- RL = Report Limit = a concentration supported by a standard in the calibration curves

Receipt
The samples were received on 12/18/2024 9:41 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 4 coolers at receipt time were 3.9º C, 4.0º C, 5.5º C and 5.7º C.

Receipt Exceptions
The Chain-of-Custody (COC) was incomplete as received and/or improperly completed. Sample #3 and #4 are MS/MSD samples. Client submitted duplicate COC of the first page but did not check off which sample was QC.

The following sample(s) was received outside of holding time: for IC N2 and N3, sample #5 was received with insufficient time, sampled 12/16 1130 EST, received 12/18 1005 CST.

Metals
Method 1630: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for the following sample associated with preparation batch 350-4263 and analytical batch 350-4287 were outside control limits: DKC-03_20241216 (500-261748-3[MSD]) and (350-1367-A-8-C MSD). The associated laboratory control sample (LCS) recovery met acceptance criteria.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Field Service / Mobile Lab
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

General Chemistry
Method 300.0: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for analytical batch 500-799925 were outside control limits for one or more analytes. See QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits.

Method 300.0: The following sample(s) was analyzed outside of analytical holding time due to system outages. LKS-01_20241216 (500-261748-5)

Method 300.0: The following samples were received outside of holding time: DKC-03_20241216 (500-261748-3), DKC-03_20241216 (500-261748-3[MS]), DKC-03_20241216 (500-261748-3[MSD]) and MLR-01_20241216 (500-261748-7).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Job Narrative
500-261845-1

Receipt
The samples were received on 12/19/2024 9:40 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 3 coolers at receipt time were 1.4º C, 1.6º C and 2.1º C.

Metals
Method 1630: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for the following sample associated with preparation batch 350-4263 and analytical batch 350-4287 were outside control limits: (350-1367-A-8-C MSD) and (500-261748-F-3-D MSD). The associated laboratory control sample (LCS) recovery met acceptance criteria.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Field Service / Mobile Lab
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

General Chemistry
Method 300.0: The following sample was received outside of holding time: PNC-04_20241217 (500-261845-1).

Method SM 2320B: The method blank for analytical batch 500-800553 contained Alkalinity above the reporting limit (RL). Associated sample(s) were not re-analyzed because results were greater than 10X the value found in the method blank.

Method SM 2320B: The method blank for analytical batch 500-801026 contained Alkalinity above the method detection limit. This target analyte concentration was less than the reporting limit (RL) in the method blank; therefore, re-extraction and/or re-analysis of samples was not performed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory. This report is confidential and is intended for the sole use of Eurofins Environment Testing North Central, LLC and its client. All questions regarding this report should be directed to the Eurofins Environment Testing North Central, LLC Project Manager who has signed this report.

Results relate only to the items tested and the sample(s) as received by the laboratory. The results, detection limits (LOD) and Quantitation Limits (LOQ) have been adjusted for sample dilutions and/or solids content.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Chicago Project Manager.

Compliance Statement

The LOD and LOQ reported are adjusted by the dilution factor when a dilution factor greater than 1 is needed. Additionally, where results are indicated as being reported on a dry weight basis, the LOD and LOQ are adjusted for moisture content as well.

Definitions of Limits
- LOD = Limit of Detection = MDL as defined by 40 CFR part 136 Appendix B
- LOQ = Limit of Quantitation = 3.33 x LOD as defined by Wisconsin
- RL = Report Limit = a concentration supported by a standard in the calibration curves

Job Narrative
500-264438-1

Receipt
The samples were received on 2/26/2025 10:10 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 4 coolers at receipt time were 0.0º C, 1.6º C, 2.7º C and 4.8º C.

Receipt Exceptions
The following sample(s) was received outside of holding time: for IC N2 and N3..

Metals
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Field Service / Mobile Lab
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

General Chemistry
Methods 300.0, 9056A: Due to the high concentration of Chloride, the matrix spike / matrix spike duplicate (MS/MSD) for analytical batch 500-807891 could not be evaluated for accuracy and precision. The associated laboratory control sample (LCS) met acceptance criteria.

Methods 300.0, 9056A: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for analytical batch 500-807892 were outside control limits for one or more analytes. See QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits.

Method 300.0: The following samples were received outside of holding time: DKC-01_20250224 (500-264438-1) and ARC-01_20250224 (500-264438-3).

Methods 300.0, 9056A: The following sample(s) was analyzed outside of analytical holding time due to system outages. TBS-01_20250224 (500-264438-5), SBD-01_20250224 (500-264438-7), MW-1AR_20250224 (500-264438-9), MW-1BR_20250224 (500-264438-11), SBW-01_20250224 (500-264438-13) and TBN-01_20250224 (500-264438-15)

Method SM 2540C: The sample duplicate precision for the following sample associated with analytical batch 500-808095 was outside control limits: (500-264438-T-3 DU). The associated Laboratory Control Sample / Laboratory Control Sample Duplicate (LCS/LCSD) precision met acceptance criteria.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Qualifiers

Metals

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

General Chemistry

Qualifier	Qualifier Description
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
F1	MS and/or MSD recovery exceeds control limits.
F5	Duplicate RPD exceeds limit, and one or both sample results are less than 5 times RL, and the absolute difference between results is < the upper reporting limits for both.
H	Sample was prepped or analyzed beyond the specified holding time. This does not meet regulatory requirements.
H3	Sample was received and analyzed past holding time. This does not meet regulatory requirements.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory. This report is confidential and is intended for the sole use of Eurofins Environment Testing North Central, LLC and its client. All questions regarding this report should be directed to the Eurofins Environment Testing North Central, LLC Project Manager who has signed this report.

Results relate only to the items tested and the sample(s) as received by the laboratory. The results, detection limits (LOD) and Quantitation Limits (LOQ) have been adjusted for sample dilutions and/or solids content.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Chicago Project Manager.

Compliance Statement

The LOD and LOQ reported are adjusted by the dilution factor when a dilution factor greater than 1 is needed. Additionally, where results are indicated as being reported on a dry weight basis, the LOD and LOQ are adjusted for moisture content as well.

Definitions of Limits
- LOD = Limit of Detection = MDL as defined by 40 CFR part 136 Appendix B
- LOQ = Limit of Quantitation = 3.33 x LOD as defined by Wisconsin
- RL = Report Limit = a concentration supported by a standard in the calibration curves

Job Narrative
500-264513-1

Receipt
The samples were received on 2/27/2025 9:45 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 5 coolers at receipt time were 0.6º C, 2.2º C, 2.4º C, 2.5º C and 3.6º C.

Metals
Method 6020B: The method blank for preparation batch 500-808815 and analytical batch 500-810217 contained Boron above the method detection limit. This target analyte concentration was less than the reporting limit (RL) in the method blank; therefore, re-extraction and/or re-analysis of samples was not performed.

Method 1631E: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for analytical batch 350-5384 were outside control limits for one analyte. See QC Sample Results for detail. Sample matrix interference is suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Field Service / Mobile Lab
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

General Chemistry
Methods 300.0, 9056A: The following sample(s) was analyzed outside of analytical holding time due to system outages. MW-2A_20250225 (500-264513-3), MLR-03_20250225 (500-264513-9), BNW-01_20250225 (500-264513-11), MW-10_20250225 (500-264513-13) and NTC-01_20250225 (500-264513-15)

Method 300.0: The following sample was received outside of holding time: PRC-02_20250225 (500-264513-1)

Method 300.0: The matrix spike (MS) and matrix spike duplicate (MSD) recoveries for analytical batch 500-807954 were outside control limits. Mis spike is suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method 300.0: The matrix spike duplicate (MSD) recoveries for analytical batch 500-807953 were outside control limits. Mis spike is suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory. This report is confidential and is intended for the sole use of Eurofins Environment Testing North Central, LLC and its client. All questions regarding this report should be directed to the Eurofins Environment Testing North Central, LLC Project Manager who has signed this report.

Results relate only to the items tested and the sample(s) as received by the laboratory. The results, detection limits (LOD) and Quantitation Limits (LOQ) have been adjusted for sample dilutions and/or solids content.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Chicago Project Manager.

Compliance Statement

The LOD and LOQ reported are adjusted by the dilution factor when a dilution factor greater than 1 is needed. Additionally, where results are indicated as being reported on a dry weight basis, the LOD and LOQ are adjusted for moisture content as well.

Definitions of Limits
- LOD = Limit of Detection = MDL as defined by 40 CFR part 136 Appendix B
- LOQ = Limit of Quantitation = 3.33 x LOD as defined by Wisconsin
- RL = Report Limit = a concentration supported by a standard in the calibration curves

Job Narrative
500-264590-1

Receipt
The samples were received on 2/28/2025 9:20 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 7 coolers at receipt time were 0.2º C, 1.1º C, 1.5º C, 2.2º C, 4.0º C, 4.1º C and 5.5º C.

Receipt Exceptions
The following sample(s) was received outside of holding time: for IC N2,N3.

Metals
Method 6020B: The initial low level calibration verification (ICVL) result for batch 500-810217 was above the upper control limit. The affected analytes are: Selenium. Sample results were below the reporting limit, and have been reported as qualified data.

Method 1631E: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for analytical batch 350-5444 were outside control limits for one analyte. See QC Sample Results for detail. Sample matrix interference is suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Field Service / Mobile Lab
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

General Chemistry
Method 300.0: Due to the high concentration of Chloride, the matrix spike / matrix spike duplicate (MS/MSD) for analytical batch 500-808060 could not be evaluated for accuracy and precision. The associated laboratory control sample (LCS) met acceptance criteria.

Methods 300.0, 9056A: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for analytical batch 500-808061 were outside control limits for one or more analytes. See QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits.

Methods 300.0, 9056A: The following samples were analyzed outside of analytical holding time due to instrument connection error. MW-5A_20250226 (500-264590-3)

Method 300.0: The following sample was received outside of holding time: DKC-02_20250226 (500-264590-1).

Method 300.0: The following sample(s) was analyzed outside of analytical holding time due to system outages. MW-3B_20250226 (500-264590-11)

Method 300.0: The method blank for analytical batch 500-809165 contained Nitrate as N and Nitrate Nitrite as N above the method detection limit. This target analyte concentration was less than the reporting limit (RL) in the method blank; therefore, re-extraction and/or re-analysis of samples was not performed.

Method 350.1: The bottle for the matrix spike sample could not be located. Analyst used the parent sample bottle for the matrix spike. MW-5A_20250226 (500-264590-3[MS])

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Qualifiers

Metals

Qualifier	Qualifier Description
^1+	Initial Calibration Verification (ICV) is outside acceptance limits, high biased.
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

General Chemistry

Qualifier	Qualifier Description
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
F1	MS and/or MSD recovery exceeds control limits.
F5	Duplicate RPD exceeds limit, and one or both sample results are less than 5 times RL, and the absolute difference between results is < the upper reporting limits for both.
H	Sample was prepped or analyzed beyond the specified holding time. This does not meet regulatory requirements.
H3	Sample was received and analyzed past holding time. This does not meet regulatory requirements.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Job Notes

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to the NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory. This report is confidential and is intended for the sole use of Eurofins Environment Testing North Central, LLC and its client. All questions regarding this report should be directed to the Eurofins Environment Testing North Central, LLC Project Manager who has signed this report.

Results relate only to the items tested and the sample(s) as received by the laboratory. The results, detection limits (LOD) and Quantitation Limits (LOQ) have been adjusted for sample dilutions and/or solids content.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Chicago Project Manager.

Compliance Statement

The LOD and LOQ reported are adjusted by the dilution factor when a dilution factor greater than 1 is needed. Additionally, where results are indicated as being reported on a dry weight basis, the LOD and LOQ are adjusted for moisture content as well.

Definitions of Limits
- LOD = Limit of Detection = MDL as defined by 40 CFR part 136 Appendix B
- LOQ = Limit of Quantitation = 3.33 x LOD as defined by Wisconsin
- RL = Report Limit = a concentration supported by a standard in the calibration curves

Job Narrative

Receipt
The samples were received on 3/5/2025 10:40 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 6 coolers at receipt time were 1.6º C, 5.0º C, 5.3º C, 5.3º C, 5.3º C and 5.7º C.

Receipt Exceptions
Sample #3- one plastic 1 liter red/purple in color while all others are clear. Wrote do not use on the red/purple container.

The following sample(s) was received outside of holding time: for IC N2,N3.

Metals
Method 6020B: The following sample was diluted to bring the concentration of target analytes within the calibration range: SMW-1SB_20250303 (500-264768-5). Elevated reporting limits (RLs) are provided.

Method 1631E: The matrix spike (MS) recoveries for analytical batch 350-5476 were outside control limits. Sample matrix interference is suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Field Service / Mobile Lab
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

General Chemistry
Method 300.0: The continuing calibration verification (CCV) associated with batch 500-808700 recovered above the upper control limit for Chloride and Sulfate. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated sample is impacted: (CCV 500-808700/25).

Method 300.0: The following samples were received outside of holding time: LKS-02_20250303 (500-264768-11), NB1-1_20250303 (500-264768-15) and NB1-3_20250303 (500-264768-17).

Method 300.0: The following sample(s) was analyzed outside of analytical holding time due to system outages. DKC-03_20250303 (500-264768-1[MSD]), SMW-1_20250303 (500-264768-3), NB2-3_20250303 (500-264768-7) and MLC-01_20250303 (500-264768-13)

Method SM 4500 S2 F: The method blank for analytical batch 500-808939 contained Sulfide above the method detection limit. This target analyte concentration was less than the reporting limit (RL) in the method blank; therefore, re-extraction and/or re-analysis of samples was not performed.

Method SM 4500 S2 F: Elevated reporting limits are provided for the following samples due to using a lower initial sample volume: DKC-03_20250303 (500-264768-1), DKC-03_20250303 (500-264768-1[MS]), DKC-03_20250303 (500-264768-1[MSD]), SMW-1_20250303 (500-264768-3), LKS-02_20250303 (500-264768-11), MLC-01_20250303 (500-264768-13) and NB1-3_20250303 (500-264768-17).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Qualifiers

Metals

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
F1	MS and/or MSD recovery exceeds control limits.
F5	Duplicate RPD exceeds limit, and one or both sample results are less than 5 times RL, and the absolute difference between results is < the upper reporting limits for both.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

General Chemistry

Qualifier	Qualifier Description

Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory. This report is confidential and is intended for the sole use of Eurofins Environment Testing North Central, LLC and its client. All questions regarding this report should be directed to the Eurofins Environment Testing North Central, LLC Project Manager who has signed this report.

Results relate only to the items tested and the sample(s) as received by the laboratory. The results, detection limits (LOD) and Quantitation Limits (LOQ) have been adjusted for sample dilutions and/or solids content.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Chicago Project Manager.

Compliance Statement

The LOD and LOQ reported are adjusted by the dilution factor when a dilution factor greater than 1 is needed. Additionally, where results are indicated as being reported on a dry weight basis, the LOD and LOQ are adjusted for moisture content as well.

Definitions of Limits
- LOD = Limit of Detection = MDL as defined by 40 CFR part 136 Appendix B
- LOQ = Limit of Quantitation = 3.33 x LOD as defined by Wisconsin
- RL = Report Limit = a concentration supported by a standard in the calibration curves

Job Narrative
500-264885-1

Receipt
The samples were received on 3/7/2025 9:10 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 6 coolers at receipt time were 0.3º C, 0.5º C, 1.1º C, 1.4º C, 1.5º C and 2.5º C.

Metals
Method 6020B: The method blank for preparation batch 500-809538 and analytical batch 500-810390 contained Sodium above the method detection limit. This target analyte concentration was less than the reporting limit (RL) in the method blank; therefore, re-extraction and/or re-analysis of samples was not performed.

Method 1630: The continuing calibration verification (CCV) associated with batch 350-5863 recovered above the upper control limit for Methyl Mercury. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method 1630: The continuing calibration blank (CCB) for analytical batch 350-5863 contained Methyl Mercury above the reporting limit (RL). All reported samples associated with this CCB were either ND for this analyte or contained this analyte at a concentration greater than 10X the value found in the CCB; therefore, re-analysis of samples was not performed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Field Service / Mobile Lab
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

General Chemistry
Method 300.0: The matrix spike (MS) and matrix spike duplicate (MSD) recoveries for analytical batch 500-809128 were outside control limits. Sample matrix interference is suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method 300.0: The following samples were received outside of holding time: PNC-04_20250304 (500-264885-5), PRC-01_20250304 (500-264885-7), CBR-02_20250304 (500-264885-13), LKS-01_20250304 (500-264885-15), MW-37_20250304 (500-264885-17), MW-42_20250304 (500-264885-20) and MW-38_20250304 (500-264885-24).

Method SM 2320B: The method blank for analytical batch 500-810035 contained Alkalinity above the method detection limit. This target analyte concentration was less than the reporting limit (RL) in the method blank; therefore, re-analysis of samples was not performed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.
